Actually i think the ISS is under Russian control registered in The CIS.
I think the CIS wants to send Boris Badinoff to inspect, or maybe
Vladimir Pootin'. :) ;) :0

That's what you would "like" to do? No. You are writing that
because you want to get even over some negative criticsm
about trying to defame and denigrate a Canadian radio amateur.

Immature "challenge."

>I am flying out to Dayton for the Hamvention in May and then some friends
>of mine and I are going to Vega for a week for golf and gambling.

Of course you are. Can an Aeronca C-3 carry passengers?

...and it's "Las Vegas."

>Here's
>the deal..I'll fly in LAX and meet you for coffee and bagels and you can
>tell me all your great exploits to my face. You can even pick the spot
>for breakfast. Whadda ya think?

I think the above is below-average creative bullshit.

The above, more or less expressed as if by one Steve Adell in
here, has been tried before, didn't work then, is meaningless now.

In order to make any real point there should have been a "challenge" made to participate in some amateur radio net or at an amateur radio club or association meeting, talking about radio or amateur radio. That way the anonymous one could have shown her "expertise" over mere mortals, achieved "fame" and "glory" at being oh so much "better," had a Real Audience who could verify everything...and reported it over the Internet.

>I think you're a coward and will most
>likely come back here with some brave typed words and you'll waffle and
>do anything not to have this come off.

Grow up. This is not a schoolyard.

>Cowards of your ilk usually turn tail and run when confronted.

Grow up. Address the subject.

Anonymous jonnie tried to throw dirt on a particular radio amateur, then threw #### on Canadians in general over the second world war, not using recorded factual information or civility. jonnie was corrected but still insists she was "wounded" and demands a personal confrontation. Idiot.

Try learning something about our geographic neighbors, including their history. Canadian radio amateurs have done some good things in and of amateur radio...and for their nation. Far better things than the blustery babble of braggart boneheads.

>SOme Leonard H. Anderson..put up or shut up.

The anonymous one wishes a personal confrontation? Fine, she can then drop by my QTH and do just that. :-)

For someone as wise as you..well. The comment was made that we were bombed at Pearl Harbor by an out of date airforce. Data and facts prove otherwise. At that point the poor denigrated Canadian amateur radio operator opted to try and change directions, ala Anderson and point out that the Mustang and Spitfire were superior. The fact that one was not yet in the air and the other was in the European theater didn't make one difference to either you or Security Officer St.Denis. BTW, did he hire you as his personal PR man? Or couldn't he handle the heat by himself?
One will never know.

What for..YOU COULDN;T PARTICIAPTE now could you? What would be the point
if you couldn't stick your nose in and throw out some of your BS. Or am
I wrong?? Maybe you do have a license? In that case, I'd be more than
happy to set up a schedule for you to participate. I liken you words to
be along the lines of that other wizard of the airwaves Art Bell.

Thanks for proving my point. Why not use OH YEA!!! So's your old man.

ANd the subject before you stuck your nose in was proving that St.Denis didn't have a clue as to Pearl Harbor. and the state of the US armed forces at that time. I notice you didn't bother to research his erroneous information. I thought you were in that war Len? You seem to know so much 1st hand. Then again you seem to know so much 1st hand about everything.

>
> Anonymous jonnie tried to throw dirt on a particular radio amateur, then threw #### on Canadians in general over the second world war, not using recorded factual information or civility. jonnie was corrected but still insists she was "wounded" and demands a personal confrontation. Idiot.

Gee..if you love Canada so much go there. They allow people like you to live freely. Gee, what a great Amerikan you are. I threw back the shit thrown at me and this country. Are you saying that I should have been silent? Typical bullshit liberal asshole. Ohh my we must apologize. We are so bad. Poor US.....ha ha you make me laugh Lenny

>
> Try learning something about our geographic neighbors, including their history. Canadian radio amateurs have done some good things in and of amateur radio...and for their nation. Far better things than the blustery babble of braggart boneheads.

Try to look into that mirror to close there Mr Lenny. You are truly the king of the nattering nabobs of negativism. I have yet to see you type anything positive. Poor little girlieman. Got his Depends all wadded in his ass crack and is in a little snit. MORON.

>
> >SOme Leonard H. Anderson..put up or shut up.
>
> The anonymous one wishes a personal confrontation? Fine, she can then drop by my QTH and do just that. :-)

DEAL!!! I'll let you know the time. I'm willing to make book you won;t be there or if you are, probably pretending you aren't home. Let's set the date, shall we.

Dayton end on Sunday, May 20th. Figure a day or two to fly out to LAS VEGAS (happy now Mr. Anal Retentive?). A day to settle into the rooms and a round or two of golf and gambling.....and since LAX really discourages private aircraft and it's cheaper to fly commercial from Las Vegas to Los Angeles... let's set the date as Wednesday May 23. Time to be determined. SO what say little fuhrer?? OK with you??

OK Lenny. Here's the original statement that caused you to stick that big nose you yours into the discussion..

There's a reason for that, Americans are too busy "not" spying on any country they deem necessary, getting their harbours bombed by an out of date air force, having their federal buildings bombed by a crazy guy named tim, having universities bombed by another loon from the middle of nowhere, dealing crack to 10 year olds, beating your wives, and raping your kids.

Since you chose to defend the Secutiry Officer, I guess we can safely say that you AGREE with him, out neighbor to the North 100%.

Feel free to refute the first slander, since that was what started it all.

The response was that the Zero was a better plane than the US had at the time of the attack.

St.Denis came back and dropped the Mustang and Spitfire into the mix as his proof the Zero was inferior.

GO ahead Lenny....dazzle us with your cut and paste prowess.

Still, your expertise is in things Nazi. Maybe you can provide 1st hand knowledge of the ME109 or better yet the ME262. Obvioulsy they were better planes than the zero and were probably active participants in the attack of Pearl Harbor.

Thanks for making our day. So go do that Voodoo you doodoo so well.

Gee, I don;t know.  You seem to be the Mr. Wizard of cut and paste so I
 am sure you already know the answer.  Can a Piper Seneca 3 carry
 passengers?  Probably not.  It was Aeronca's answer to the Piper Cub
which couldn't carry passengers, just a right seat and some baggage, but
since they stopped making them in the late 40's, early 50's, I leave the
answer to you, someone who amongst his many accomplishments probably not
only flew one, but designed it as well, or at least the radio circuits,
purposely avoiding those that use OOK Morse.

Here's one for you Lenny.  What is the airspeed velocity of a laden
swallow?

Yep, reminds me of the time I had a high school math teacher give

me a 90 on my report card, but gave me a red U (unsatisfactory) for
effort because she felt I should have "worked" harder.
My parents got a good laugh at that.

Cheers,
Bill K2UNK

Dick, you may think that the demeaning and abusive behaviour you exhibit on this forum is appropriate. I think it is no more than mean-spirited and destructive.

Fortunately, most of us who love and enjoy Morse code are able to point out that such conduct is not a result of the "hard work" that you put into learning the code; it is a personal choice that, fortunately, most hams do not take.

It doesn't change the fact that ham radio is dying on
the vine. With 67 yrs being the average age of ham
op's, it won't be long before the whole thing is a memory
confined to the obsolete heap of technology along with 1200
baud modems and code keys. Hamfests have all but
dried up. People ain't buying radios except for VHF stuff.
What young person, except for geeks, want's to go thru
the trouble of stringing up aerials around the house when they
can use the internet with T1 lines and get streaming 2-way video?
FRS radios outsell ham rigs by 3000%
Wayne Green was right in all those editorials he wrote during
the past 5 yrs.

I don't think that handling emergancy traffic with your ham gear on 11 meters was such a legal transmission. Your Icom 706 isn't type accepted equipment to be transmitting on 27.185MHz. I really don't think you will get into trouble for handling emergency traffic on CB with your ham rig as long as you don't make a habit of it. I would sujest setting up a type accepted CB station (they are very inexpensive) if you are going to handle emergency traffic on the CB band.

All though, I honestly don't think that the FCC is not going to do anything about freebanders and the technicians that set their radios up for them. Freebanders are all over the place here in Madison County GA. The hams that are in this area aren't much help. They use their ham equipment on 11 meters too. All this does is sets a bad example for future possible hams. Just like you they think or just don't care about what is legal and what is not. Why should somebody get their ham ticket? I mean if they can get on CB radio and "shoot skip"(work DX) without worry of repercussions. Why work to get the ticket? That is why it is important to follow those pain in the rear part 95 rules and regulations. That example we must set is just to important to let go of.

In my honest opinion I think that the FCC and ARRL should form a ticket for those 4 million CBers and allow true hams General and above run 1500 watts pep on 11 meters. tech. and novices 250 watts and the no license CB ticket 4 watts just like it is now. You can bet that this would get more people involved in ham radio. I think that it was a mistake for the FCC to take that band from us in the first place. Thats just my opinion!

when normal communication systems are not available.
    I find it hard to believe that there was no normal communication systems
available. Cell phones are everywhere.

Probably not as curious as some of the virtual porn being served up by a few hams on the newsgroups. I assume the hams in question had good training on certain frequencies on 75 or 20 meters. And we thought W2OY was bad back in the 60s! He was a prince next to some folks today!

The emergency was mine personally and I had exhausted all ham radio possibilities. CB was a last resort to keep from freezing.

There was no cell phone in my disabled truck. Saying that cell phones
are "everywhere" is a pretty lame statement.

I laughed my ass off when a couple guys in this thread spouted off about all the government enforcement if someone unauthorized uses the marine bands. One guy even boasted BIG federal penalties. I got news for you. I'm in commercial radio. We find people all the time using cheap marine radios for CB style communication, both local and long distance, even kids using it as a hobby, like CB, just to screw around with. THERE IS NO FEDERAL ENFORCEMENT. We've turned in the exact location, names, and other operating information to the FCC and other feds. They don't care. They have NEVER EVER done anything to stop this illegal operation on marine frequencies. and like one guy here said, it is a growing hobby. Crap, I've seen do gooder hams in Chicago, Detroit, and other cities turn in these illegal ops. Nothng, absolutely nothing has ever come of these complaints. I even turned in a couple guys who were operating on calling and distress frequencies, and nothing was ever done. The illegal ops continue, even now and have continued for years.

Yup. Most of them flew P-40s.

>I
>can't remember exactly what it was, but it was rather impressive.

Agreed - particlularly considering their limited numbers and long supply lines.

>It ranks right up there with The Alamo where 150 or so Texans
>crippled the Mexican army so badly that Santa Ana had no chance
>at the later Battle of San Jacinto.

I thought the biggest factor was the delay. The Alamo held out for so long that Santa Ana's opposition had more than enough time to prepare for San Jacinto.

What has always puzzled me is why Santa Ana did not simply bypass the Alamo. He could have left a small force behind to keep it surrounded and cut off while the rest of his army went on to San Jacinto. Focusing on a tiny fort with only 150 defenders was just plain dumb.

But if you want to talk about being hopelessly outnumbered, the prize must go to the battle of Rourke's Drift, where 104 British soldiers (many of them sick or wounded) held off more than 4000 Zulu warriors in a three-day battle. The officer in charge, by the way, had never been in battle before. He was an engineer, sent to build bridges.

>"Best" is a relative term.

Absolutely agree.

> The Flying Tigers were faster so they
>just strafed the Zeros, knocking some down, and simply outran the
>rest.

The P-40s could dive faster, and were more heavily armored. The Zero was a state-of-the-art aircraft at the time, but that does not mean that all Japanes pilots knew how to use it to best advantage.

> A handful of US civilian pilots essentially stymied the
>Japanese invasion of China before the US entered WWII.

Technically they were "volunteers" - another word for "mercenaries". Considering what the Japanese were doing in China from 1937 on, it's clear that their cause was morally justified.

> The Zero
>pilots avoided any Chinese city protected by the Flying Tigers.

Only problem was that there were far too few Flying Tigers.

The aircraft know as the "Zero" was actually a whole family of aircraft, used for a variety of purposes.

--

The Japanese had world-class military technology at the start of WW2, and they had plenty of it. The Zero was in no way "outdated" at Pearl Harbor. But Japan did not have the ability to keep up with rapidly changing technology as the war progressed. Worse, many Japanese military policies and bad decisions reduced the effectiveness of the Japanese military, and helped them to snatch defeat from the jaws of victory.

For example, it was standard US Navy policy to rotate combat personnel. Sub crews and carrier air squadrons were made up of a mixture of experienced and new people, and many of the most experienced were sent back to the States to teach in the training schools. End results were that things learned in combat were taught to newcomers, no combat unit was made up of all new or all experienced people, and losses did not wipe out large numbers of experienced people.

The Japanese did not rotate their people - they thought a combat pilot should just keep flying until killed or incapacitated. End result was that their experienced people were all concentrated in a few groups. Japan's biggest loss at Midway was not the four aircraft carriers and associated airplanes, but the hundreds of experienced pilots and support personnel who went down with them. The ships and planes could be quickly replaced, but not the people and their experience.

>--
Nonsense, Cecil. Apples and oranges.

The ARRL BOD is not a united, homogeneous group with only one opinion. Their views on various issues vary all over the map. On the code test issue, the views of the various directors range from "absolutely no change" to "get rid of it ASAP".

Until recently, the majority view was "keep code testing" and "don't change S25.5". Directors who ran on nocodetest platforms were usually not elected. Many directors do not have a cast-in-stone codetest policy.

Recent events (input from members, FCC statements concerning restructuring and the IARU Region 3 meeting last year) eroded that majority view to the point that the official policy changed.

By not telling the membership how the various directors voted, the membership cannot hold the directors responsible for their actions. This works both ways, for and against. Yet such actions are clearly allowed in the bylaws.

I am pleased to say, however, that my director moved for a roll-call vote. His motion was defeated, though.

If the directors are the representatives of the membership, then the membership

has the right to know how the directors voted. We are not three-year-old
children who need to have the truth hidden from us "for our own good".

>everything that Ham radio stands for.

Yada, yada, yada. Dick and I don't think ham radio stands for hopeless
technical ignorance. And anyone who would have to post such a question
to a Usenet newsgroup would be quite well within that definition.

>First and foremost with all Hams is
>the ideal of the dissemintation of information. It is how we inform and
>teach ourselves and others about our hobby which in turns causes us to gain
>new members that strengthens our hobby and enrichens not only our lives but
>others as well. It is the same for all hobbies whether it is model
>rocketry, radio control cars and planes, Civil War re-enactments or any
>other hobby you can think of.

I don't disagree with any of that, and I'm pretty sure Dick wouldn't either.
However, there are way too many "hams" these days, even a lot of them
with Extra-class licenses, who seem to be technically uninvolved to an
embarrassing degree. These days, "Elmering" isn't just providing guidance
and encouragement, it's showing the guy which button to push, and then
pushing it for him! The problem is, there is a wealth of information out
there, most of it free for the taking, which goes by the wayside because
the new "consumer-oriented" hams couldn't be bothered. Some hobby.

>Did either of you two ever think that maybe
>some people are happy just working the VHF/UHF bands?

Sure, but that's also a very readily available excuse to never learn any
practical communications skills. It's the same attitude which, in my
area at least, has kept ham radio locked in the Dark Ages.

>Maybe RG had a period
>in his life where he had to put his his hobby on the backburner and is just
>now getting back to it. I was going to reframe from attacking you two but
>since I took your comments personally you two are now fair game.

Is that anything like "refarming?" You seem to be singing a very sad
refrain.

>Everyday
>I'm out there trying to convince kids and adults alike to realize that there
>are other things in life to do other than drugs, the television, and
>celebrity idealization.

And, of course, you think Ham Radio is the obvious answer. Well,
isn't that just so Newington-ish of you. I think smallbore rifle shooting
is the answer myself. Ham radio is nothing I'd get kids involved in

anymore because it's been dumbed down to the point where it really doesn't hold any useful educational value. And, considering the fact that the average 13-year old can communicate globally on his/her own computer, where is the incentive?

>And in case your pea-size brains didn't think of
>it, children do have access to computers and may watching what you post.

I see. They're seeing you accuse me and Dick of having "pea-size brains" at the moment. How charming. It seems to me that if you really cared, you would have been a bit more polite, in spite of how we may have offended you.

>I
>know guys like you...I can time my watch to the way you act...No doubt you
>two probably have at least $50,000.00 apiece worth of ham radio equipment
>with huge towers and yet your front yards look like they could have been
>used as sets for the movie "DELIVERANCE".

That's where you'd be wrong, at least in my case. I've been a ham for almost 20 years, and my lifetime expenditure in ham gear has probably yet to reach the $5,000 level. This includes two complete HF stations, 3 2-meter mobile rigs, 2 UHF mobile rigs, a couple of HT's, lots of tools, parts, two PC's dedicated to amateur data modes, and other incidentals. I operate from a 3rd floor apartment using indoor dipole antennas on 30 thru 10 meters, never exceeding a power output level of 25 watts on HF CW, RTTY, PSK31 and other data modes. I use no HF SSB whatsoever due to my setting and the higher power requirement SSB imposes, and the TVI that goes with it. The outside of my apartment building is, admittedly, not in the greatest of shape, but that's more a reflection on the poor management of the property than anything myself or my fellow tenants have done -- inspite of paying the highest rents in our city (Dover, Delaware).

>By way, your tickets are a
>privilege and not a right and thus can be revoked at any time!!!

Only if we do something to *cause* them to be revoked. Telling the truth on a Usenet newsgroup doesn't jeapordize our licenses one iota. What was your point, anyway?

>Oh yeah,
>one more thing -- my license is expiring this summer. I'm a no-code tech
>and would like to know how to renew my license////////

My advice is -- Don't let the door hit you in the ass on your way out!

73 de Larry, K3LT
Anxiously waiting for the FCC to "revoke" my license at Bryant's request!
Are you shaking in your boots yet, Dick?

People who grab advanced (not Advanced) class ham licenses without learning anything meaningful, which is clearly allowed and regularly done, can fairly be characterized as I have done, and denial of the facts doesn't change them. Telling it like it is, is neither demeaning nor abusive.

> I think it is no more than mean-spirited and destructive.

How about instructive? Many of those folks don't know that they are without knowledge, after all, they have passed the Extra class test. Shouldn't that prove something? Yes it should, but in fact it does not.

>
> Fortunately, most of us who love and enjoy Morse code are able to point out

Your words, not mine. All the avoiders consider it next to imposssible.
Not me.

> it is a personal choice that, fortunately, most hams do not take.

Call it response in kind. You know what happened when I showed up on
RRAP a few years ago with my very reasonable defense of code testing. I
was immediately leaped upon by every raving idiot in the no-code camp,
labelled all sorts of derogative descriptives, and cast as the worst
sort of scoundral. I haven't forgoten that, nor shall I. Whatever I have
had to say on the subject from then on has been true, just, and exactly
to the point. Facts are facts. You can just accept that ham radio will
be no more than glorified CB if you wish. I can't do it.

The siege took a lot of time but the actual battle lasted less than one day. There were a lot of demands for surrender. All the Alma defenders knew they were sacrificing their lives in nothing but a delaying action and their kill ratio was quite high.

> What has always puzzled me is why Santa Ana did not simply bypass the Alamo. He

Yep, one of his officers congratulated him after the victory at the Alamo.
Santa Ana replied that one more victory like that one and he wouldn't
have an army left.

I'm glad you weren't Santa Ana's advisor. If he had listened to you, I
might be speaking Spanish right now.

> The first North American Aircraft "Mustang" flew on October 26, 1940. The North American Model Number was NA-73X and was required to have the civil aircraft registration NX-19998. [source: Rockwell International public relations (Rockwell bought NAA some time ago)]

The Curtiss P40, developed from the P36, was America's foremost fighter in service when WW II began. P-40's engaged Japanese aircraft during the attack on Peal Harbor and the invasion of the Philippines in December 1941. They also were flown in China early in 1942 by the famed Flying Tigers and in North Africa.

The P-40 served in numerous combat areas - the Aleutian Islands, Italy, the Middle East, the Far East, and in the South pacific, and some were sent to Russia. though often outclassed by its adversaries in speed, maneuverability, and rate of climb, the P-40 earned a reputation in battle for extreme ruggedness.

By early 1944, the P40 had been replaced largely replaced by faster and more powerful fighter airplanes, and in July 1945 only one P-40 group remained operational in the AAF. At the end of the P-40's brilliant career, more than 14,000 had been produced for service in the air force of 28 nations.

P-40 Specifications
Size: span 37'4"; length 31'9", height 12'4"
Weight: 9,100 lbs max
Armament: six 50 cal. machine guns; 700 lbs of bombs externally
Engine: Allison V-1710 of 1,150hp
Cost: $45,000
Maximum speed: 362 mph
Cruising speed: 235 mph
Range: 850 miles
Service ceiling: 30,000 feet

The North American P-51, designed and built at the request of England in 1940, initially was not too impressive to the Air Corps because of its limited high-altitude performance. In 1942, however, the British tested a mustang in which a Rolls-Royce "Merlin" engine had been installed. results were most promising.

The AAF decide to purchase Merlin-powered Mustangs and use them for high altitude escort of the B-17s and B-24s. In December 1943, the P-51B flew its first comet mission from England. Meeting Luftwaffe interceptors deep inside Germany territory, the Mustang repeatedly scored heavily over the enemy planes.

By the end of WW II, the P-51 had been in practically every active combat zone, including the pacific where it escorted B-29s to Japan from Iwo Jima. With the advent of the Korean Conflict, it was again put into combat primarily for close support of ground troops.

Approximately 14,000 P-51 were built for the AAF. It was the last UAAF propeller fighter in operation.

P-40 Specifications
Size: span 37", length 32'3", height 13'8"
Weight 13'8"
Armament: six .50 cal machine guns and ten 5" rockets or 1,000 lbs of bombs
Engine: Packard Merlin V-1650 of 1,695 hp
Cost: $45,000
Maximum speed: 443 mph
Cursing speed: 275 mph
Range 1,675 miles
Service ceiling: 41,900 feet

They were great airplanes in their day, but now they are retired.

It is said that with the entry of USA into WW II more then half of all USA licensed hams entered the service to provide vital radio communications, much by Morse code. Even thought 30,000 or more entered the service, it was not enough, and radio teletype was invented to provide major communication circuits.

Morse code was great in its day, now its time to retire it as amateur radio license exam requirement. Technology changes both the design of aircraft and radio communications.

Larry KC8EPO

Pretty neat the way you cribbed the info about the aircraft and
presented it without attribution, Larry. Did you do the same with the
information regarding morse code? Since you are one who doesn't use it,
I'd suspect your information may not be based on first hand knowledge.

Dave K8MN

I wish to debate the methods used to derive conclusions. You don't want to
debate. All you want to do, Len, is call names and repeat the same mistakes
over and over.
>
>I believe my math was close enough to be accurate in assessment
>of the classes of licenses both before and after April 15, 2000,
>namely that the New licensees' trend to Technician continues

Your "belief" in something does not make it a fact. I know people who believe
in the Easter Bunny, but their belief does not mean I must agree with them.

Everyone knows that most new hams start out as Technicians. Been that way for a
long time. I've said it many times. It's a nonissue.

> and that there is no signs of any exodus to increase users on
>amateur HF bands.

Another example of faulty process on your part, Len. You lump together all classes of amateur license with any HF privileges at all, EXCEPT Techncians with HF. But there is a BIG difference between the minimal Novice HF privileges (tiny slices of four HF bands, and only one mode on three of those bands) granted and those of the General and higher classes. (Generals have all privileges on 5 of the 9 HF/MF amateur bands, and the majority of the spectrum in the other 4 bands. And they have all mode privileges. The other classes are even better).

Since the end of March, 2000, the number of US hams with General and higher licenses has jumped by 30,561 - that's 10.5%. Thirty thousand plus new hams on bands/modes they could not use before. That's significant.
>
>That trend is visible to all...except those who do not want to see it.

Nobody denies the first trend. Only you see the second.
>
>>Why? Your work is faulty. That is the issue. I'm not going to do your work
>>for you.
>
>Ooooo! :-)

>
>>If someone makes mistakes in how they analyze that data, is it somehow
>>"wrong" to point out those mistakes? If so, why?
>
>Sorry, old fly speck, but my analysis is no more "mistaken" after
>restructuring any more than it was "mistaken" before.

It was mistaken before and it is even more mistaken after. Do you still think that all Technicians have no HF privileges, with or without CSCEs? Yes or no?

>You
>DON'T LIKE THE ANALYSIS, therefore you brand the analysis
>"mistaken, faulty, error, etc."

I don't like analysis METHODS that are faulty. Such as counting months twice, which you did. Or ignoring the reclassification of Tech Pluses as Techs upon renewal, which you also did. Or assuming that NO new Technicians upgraded in ten months, which you also did.
>
>What YOU WANT is to keep the status quo as much as possible,
>to keep the Faith in what all Good and Real hams "should" think,
>"must keep" as a "moral" and (even) way of life.

How do you know what I think? Can you read minds? Are you God? I don't think so.

What is really going on is that I have repeatedly shown that your analysis methods are faulty. So rather than correct them, or admit your mistake, or even try to defend them, you attack the messenger.

Textbook ad hominem. Which is faulty logic, too.

>I'm not going to
>do that since the environment is changing, the paradigms are
>changing and evolving.

Buzzwords and bafflegab. Heck, those aren't even current buzzwords and bafflegab. Get with it, Len - "paradigms" is an '80s management buzzword.

>I don't give you twenty cents for your
>paradigms of the olden times.

I didn't ask for it. All I want is answers to simple questions, but you don't give those. Because they are too embarrasing for you.
>
>>Me? Not at all. I'm just pointing out your errors, Len. Your mistakes in
>>logical processes and the handling of these numbers. Real engineers welcome
>>having their work checked. Wannabes are afraid of having their faulty
>methods
>>exposed.
>
>Bullshit.

How? If your numbers and methods are valid, explain and defend them against my critique. Show where MY analysis is faulty. You haven't done that - all you do is edit out my proof of your errors and attack the messenger. Then you toss in some dirty words for some reason or other.

>You are trying to act like Management.

Nope. I'm acting like a real engineer, who wants to see how the conclusions are derived, and who won't accept sloppy thinking and faulty handwaving processes.

Worse yet, I won't be bullied into accepting something because somebody calls me names or uses scatalogical terms.

>You WANT
>certain conclusions and, by Hiram, you are going to get it.   :-)

How do you know what I want? Are you God?
>
>The trend of newcomers going to Technician was there before
>restructuring. It continues.

> Further, against the grain of the
>established ham conservatives, Techs are renewing as Techs.

Most of them. Same as every other class. I've been renewing in the same license class for three decades.

>Such is heresy against Conventional Wisdom (CW) of the
>long-time ham conservatives.

You said that - not me. Why do you deny that ANY of them upgrade?
>
>REAL engineers challenge bad decisions in "open court" of
>design review meetings or by going to other companies.

Not just there. Ever hear of a "checker" in a design office? Or do you think your work is always without error, and does not need to be checked?

This forum serves exactly the purpose of an engineering review. Faulty arguments and processes are exposed for what they are. You can try to shout me down, but it doesn;t work that way. Reality is absolute. A is A, whether you like it or not. Whether you believe it or not.

> REAL
>engineers don't sit around complacent with state-of-the-art of
>three decades ago or outdated methods.

You mean like SSB?

Real engineers don't fix what ain't broke. Real engineers don't reinvent the wheel. Real engineers don't accept things because somebody else says they "believe" those things.

Real engineers are not bullied.

> Avocations are NOT engineering.

Many of them require engineering. When a ham puts up a tower, it better be engineered correctly, because if it falls down and causes damage, the fact that it's "avocational" doesn't mean a thing.

Same for RF exposure, spurious emissions, compliance with the rules, etc.

> Amateur radio is an avocation.

So? Your attempted diversion does not hide your mistakes or change my arguments against those mistakes.
>
>>No. Your method of using the data is faulty. Your understanding of the AH0A
>>information, and some of the current FCC rules, is defective, faulty,
>>incorrect, invalid. In other words, just plain wrong. As I have shown
>>repeatedly.
>
>All Miccolis has "shown" is a desperation to keep the status quo,
>including keeping all the old myths alive.

Where do you get a nonsequtir like that?

The status quo is now one code test and three written tests. The status quo is

now that support for code testing is only kept alive by the treaty
requirement. The status quo is that support for that treaty requirement is
decreasing. The status quo is that the code test will disappear shortly after
the ITU meeting in 2003.

> The status is not quo
>and newcomers are not appreciating the standards and practices
>of three, four, or five decades ago.

They aren't? How many "newcomers" do YOU know? How do you derive such a
sweeping statement? From your "beliefs"?

> Miccolis is in denial of the obvious.

Not me. You're the one denying the obvious, like 7079 Tech Pluses renewed as
Techs since April 15, 2000.
>
>>>If the data shows trends away from what "should be" or
>>>what is urban myth, then the data and everything about it
>>>is "faulty." :-)
>>
>>That is YOUR philosophy, Len, not mine.
>
>The hell it isn't. :-)

Exactly. "The hell it isn't" means "IT SURE IS!" Thanks for confirming what I
said.

(Proof: If A says "X is a good brand of widget" and B says "the hell it is!"
then B is disagreeing with A. Common English usage.
So if B says "the hell it isn't!", B is AGREEING with A.
QED)

>>I'm an engineer. Engineers deal with facts and reality, not myths. Real
>>engineers don't just shuffle numbers - we know what those numbers mean,
>their
>>accuracy, and how they were derived.
>
>Geez. A rather pompous way of trying to say Miccolis is the only
>one correct. :-)

I leave to the experts in that field - like you, Len.
>
>REAL engineers deal with facts, reality, environment, social climates,
>public opinion, quality, and, certainly, some numbers. Lots of the
>things that begin an engineering project developement aren't Divine
>or cast in everlasting cement. Even the goals can change between
>start and finish of a product. REAL engineers stay flexible, adaptable,
>able to deal with change and changes.

I know. That's what I do every working day. You just described me to a T.
>

>The amateur radio Beliefs that you subscribed to three decades ago
>have changed, are changing.

Nobody denies that, least of all me. Why do you spend so much bandwidth repeating the obvious, Len?

>Right about now one out of three US
>radio amateurs are Technician class. The vast majority of that
>class has not taken any morse code test

Ahhhh - BUT SOME OF THEM HAVE! At least 7079 of them, and probaly many more. Which means they are NOT all "noncodetested" or "non-HF licensees".

>and it doesn't appear likely that they wish to do so.

Pure wish-fulfillment and speculation on your part, Len. Nothing else. You don't know how many have taken the code test, so you ASSUME nobody has. You deny the stated proof that thousands have taken the test.

If all someone wants from amateur radio is VHF/UHF, there is absolutely NO reason to upgrade beyond Technician. Nothing wrong with that. If someone is willing to wait until 2004 or so, there's no reason to take the test, either.

> The FCC said 11 years ago that it
>did not consider morse code testing to be useful to them as
>indicating anything useful for licensing. It repeated that one and
>a half years ago.

Of course. That's what they said. So? They said that 4 license classes was the best thing for ham radio in the NPRM, then dropped it to 3 in the R&O. They had to issue an errata to the NPRM, and the errata had mistakes in it. They say all kinds of things.

> Long-time conservative hams are still stuck in
>their time-warp of "knowing what is best for newcomers" when all
>they are doing is making newcomers do the same as they did...for
>no reason other than making them go through a Hazing Ritual.

What the heck are you babbling about?

Is it wrongthink to disagree with The Commission? Are they infallible?
>
>Newcomers aren't buying the old Belief set. They shouldn't.

Uh huh. Instead, they should buy YOUR "belief set", founded on hate of anything that you don't like.

Who are you to tell newcomers what to believe? You can't even defend your own analysis processes here.

Try admitting your mistakes instead of attacking the messenger.

N2EY

Dick was only pointing out the truth that you fail to accept because you
prefer to live with your head stuck in a hole in the ground... or up your ass.

I just found out the league is going to push to remove all code requirements
at the next international meeting. It's just the next step in their continuing
efforts to dumb things down.

Soon, the only difference between a ham and a CB'er will be a piece of paper.
Our bands sound more like 11 meters everyday.

Don't buy a League membership people if you value this radio service, that's
possibly a better idea than sueing them.

> [snip] I even turned in a couple guys who were
> operating on calling and distress frequencies,
> and nothing was ever done. [snip]

You're right, it does happen all the time. And its costing taxpayers, such as yourself, millions of dollars each year. In just one Coast Guard district (District 13, Pacific NW), there were over 400 false distress calls in 1999 alone, each resulting in a response from the Coast Guard (at a average cost of $2800 each incident). And there are 13 other districts with nearly the same number of false distress calls. Do the math. That is what all those illegal operators are costing taxpayers.

But that is just the financial cost. Even more important is the potential human cost. Any one of those false distress calls could result in young men and women putting their lives on the line in dangerous weather conditions (our Coast Guard must respond to all distress calls - even those which eventually turn out to be false). And each word uttered by those marine radio "CB'ers" has the potential to interfere with critical communications involving navigation or distress.

And, you're also right, there is not enough enforcement. But why should it require government enforcement for people to understand what they're doing is not wise? Why do people care so little about the welfare of others - so little it requires government enforcement before they're willing to do the right thing?

And, while there certainly is not enough enforcement, that is not to say there is no enforcement. Like I said earlier, if the actions of these people result in the loss of life or property, they will find out very quickly that enforcement does indeed exist. It is just sad that it often takes the loss of life or property before these people realize the consequences of their actions.

I get very angry when I'm out on my boat and hear someone using a marine radio illegally. Not because I'm some do-gooder out to control others. But because I know that my safety, and the safety of my family or anyone else on that boat, depends on that radio when something goes wrong. I simply cannot understand why these people would be willing to risk the safety of my others just so they can play on the radio.

Cecil:

No, he's referring to the fact that a lot of Americans suffer from chronic dehydration. I started drinking more water myself, and it virtually cured my tinnitis. Obviously, my sinuses were dried up, which made my ears ring. Now that I'm off the road and have an "office" job, I no longer have to limit my fluid intake just to maintain a schedule. Yep, Wayne *is* right about that!

Hansl, Hansl, Hansl!

Now we all know that some 11-year old kid who was looking for information
about ham radio just read that, realized it came from an amateur radio
operator, got completely turned off, and went back to questing for the
Secrets of the Tombs or some such crap.  It will now be up to me to bring
him back by challenging him to learn a unique, fun, practical and
challenging mode: Morse/CW!

I think you spend too much time on the HF phone bands.

Thank-you for moderating this unmoderated NG, Your Geezerness. Lord knows we all respect YOU for NEVER deviating from thread topics or facts.

Yeah....Right.

>No explanations, nothing but the extension of personal pejoratives to
organizations. No >thinking.

None on YOUR part, anyway. Again, you fail to explain how it is that I am supposed to not be able to effectively assess the current circumstances that exist on the 11 meter CB band TODAY based upon it's creation in the 1950's.

Based on YOUR logic, healthcare professionals should not be able to assess a patient's condition TODAY since they were not there when the patient was born.

Pretty stupid "reasoning" on your part, Your Ineptitude, but nothing we haven't come to love and cherish about you.

>Showing fond regards will get nursie nowhere.

Trust me, Your Putziness, NOTHING would break my heart faster than knowing I wasn't "getting anywhere" with you.

Again..."Yeah...RIGHT!"

>family or anyone else on that boat, depends on that radio when
>something goes wrong. I simply cannot understand why these people
>would be willing to risk the safety of my others just so they can play
>on the radio.

Dwight:

I'll explain it for you, then. It is the instant gratification and the rush of
personal power that comes from projecting a part of yourself (your voice)
over a long distance. I used to get this same effect when I used HF
phone. The difference is that I could control myself, and operate
completely within the rules. When it became obvious that people
who wern't as personally invested in the hobby as I was were willing
to make trash of the airwaves, that's when I gave up the microphone.

If the Marine VHF band is being trashed, then Riley and his
counterparts who have control over that service need to get out there
and make some pretty severe examples out of the worst offenders --
and do it quick.

I disagree with you, Steve; I do not think that the Amateur Radio Service
should stop being a learning tool.

Now, as to your MIT analogy, first, I don't believe that you obtained an MIT
degree for a boxtop and an addressed envelope. Can you post some details?

Second, do you think that MIT should award a degree to someone who did not pass
his or her exams if he or she worked really hard at trying?

It is not a matter of work, it is a matter of meeting the requirements.
Whether someone did so easily or with great difficultly cannot be measured.

>There is an ongoing, irrelevant gang-machismo insult from nursie
>on IMPOTENCE.  Sorry, little girl, I do not have that or even
>expect that.  However, considering the number of times nursie
>has written it, she is probably post-menopausal.

     And it seems that you are particularly affected by the insinuation of it,
ergo I must have hit a resonant chord.  Not that I doubted it.  Most men in
your situation do one of two things...they cower and withdraw from society, or
they redirect their frustration at a third party.

     Unfortunately in this case, WE are the third party.

>No.  I said "virtually expire."  For all intents and purposes, a
>commercial radiotelephone license has little need in US
>commercial radio.  It is not a necessity for me being retired.
```

That's NOT what you said, but if you think it let's you dodge the facts, I guess it makes you feel better. And according to YOUR words, you are still working in the profession.

>False. Nursie will come on again with the "necessity" to take an
>amatuer radio examination in order to "appreciate it" or show
>"dedication" and personal resolve.

Nope. I reiterate that YOU are UNABLE to make an INFORMED opinion on present day Amatuer Radio activities in as much as you (by YOUR admission) do not subscribe to current Amateur periodicals, nor are you active in Amatuer activites or programs.

Your SOLE "exposure" to Amatuer Radio is your ranitngs in this newsgripe and your failed writing career in a long-since-failed Amateur magazine. You profess such initmate working knowledge of rules and regulations yet in a currently running thread with Hans you acknowledge that you are not "subscribed" to the FCC's "Daily Digest", a service that exisits for the very purpose of keeping people abreast of radio regulatory matters.

Not very timely, are you?

>Nursie wants to roll around in the mud of personal pejoratives yet
>cannot bring herself to consider that a First Phone was a license
>examination at an FCC office in Chicago, March 1955.

Sure it was. But it was not then nor is it now an Amatuer Radio examination. That test, now over 46 years old, still does not imbue you with any special knowledge or experience in matters pertaining to the Amatuer Radio service beyond the relative theoretical topics.

>Nursie can only mud-wrestle.

Ever been to a mudwrestling show, Lennie? You see who wrestles? You think I have a problem getting in the mud with them...?!?!

>Nursie is a prime example of a US Extra class amateur radio
>licensee.

A perjorative of your own, Lennie.

Lennie is a prime example of all EE's, however I know a few other Anderson's and thankfully they are a bit more rational and mature.

A LOT more mature.

>"prove" that? By insulting others again?

The question is not can I prove there are any more HF priviledged licensees on the air...the question is can YOU prove taht there is not.

You are the one making assertions as to the lack of HF authorized Technicians.

>Not ignorance, nursie. It shows up on everyone's screens. You have
>an obsession with Getting certain people. Quite a visible obsession.

Only with you, and recently with Hans, but then neither of youseem to be able to disassociate yourselves casting the same insults and "perjoratives" that you accuse others of.

Not a completely unexpected eventuallity for persons in your condition.

There are no "charges", Lennie. It's a simple truth, and it has been addressed to you in those same words by more than one person.

Youa re hateful. You ahve been caught lying more than once and your constant assertions of affiliations with neonazis can be called "abuse" at the VERY least.

Nothing false in any of it, Lennie.

Lockheed P-38 lighting

The lighting was designed in 1973 as a high altitude interceptor. The first one built, the XP-38, made its public debut on February 11, 1939 by flying from California to New York in seven hours. because of its unorthodox design, the airplane experienced "growing pains" and required several years to perfect in for combat. late in 1942, it went into large-scale operations during the North African campaign where the German Luftwaffe named it "Der Gabelschwanz Tuefel" or "The Forked-tail Devil".

equipped with droppable fuel tanks under its wings, the P38 was used extensively as a long-range escort fighter and saw action in practically every major combat area of the world. It was also used types of missions as dive bombing, level bombing, ground strafing, and photo reconnaissance.

By the end of production in 1945, 9,923 had been built.

P-38 Specifications
Size: span 52', length 37'10", height 12'10"
Weight: 17,500 lbs loaded
Armament: One 20 mm cannon and four .50 cal machine guns.
    Also could carry ten 5" rockets or 4,000 lbs bombs.
Engines: Two Allison V-1710s of 1,475 hp each

Cost: $115,000
Maximum speed: 414mph
Cursing speed:275mph
Range: 1,100 miles
Service ceiling: 40,000 feet

>Ham CW will die years after the FAA lifts the
> airworthiness cetificate of the last P-51D.

The FCC has not pulled the type acceptance on old
commercial transmitter or barred amateur from building
the own either. No one is asking or expects CW to die.
The Morse code exam requirement is unnecessary,
not in the public interest, and not in conformity
with 5 USC 706.

>Really?? And they first actually flown in combat didn't appear in the
>skies till 1943.

Jonathan, you'll have to forgive Lennie the Loser. You see, Lennie was an electronics technician at one time but is now retired in Southern California. He has nothing but time on his hands to make these posts. If you follow most of his posts, you will find a handful at one time with the same Date/time group on them. Lennie spends hours off-line then dumps his tripe like a bag load of unwanted kittens along the highway in one download.

He once wrote some pieces for a ham radio magazine that went out of circulation almost 2 decades ago, yet Lennie has never let go of the fact that Amatuer Radio as a whole did not embrace HIS wisdom and HIS leadership over the "unwashed masses" of John Q. Citizen Amateur Radio Operators.

The point was made by you several times that the Mustang was NOT in service at the beginning of the war. Lennie felt it necessary to exert some sort of "expertise" by regaling us with the registration numbers of the Mustang prototypes and NAA/Rockwell ownership history.

None of it was pertinent, but it made Lennie feel like he was once again showing his superior knowledge of night-school educated electronics technicians over mere mortal Amatuer Radio operators.

>So, no points for you, although you
>can obviously cut and paste from reference materials very well, and for
>that you get a gold star

That he does well. Lennie can "hang ten" on the Internet "surf" with the most of them. Too bad that with all that information at his fingertips, common little facts are always tripping up his rants.

>Aren't you the guy who is infatuated with Nazi Germany?? You seem to
>refer to them a lot. Well, no use for you that's for sure.

Lennie can't "pontificate" without downgrading or humilating others. The ultimate humiliation (or attempt at it, anyway) is to make analogies with such vile vermin as the nazis. Only in such a manner can Lennie make any headway.

>of the classes of licenses both before and after April 15, 2000,
>namely that the New licensees' trend to Technician continues and
>that there is no signs of any exodus to increase users on
>amateur HF bands.

"Close enough" only counts for horseshoes, hand grenades, and nuclear weapons.

Your's was no more than an estimation.

"Exodus"...??? I believe most hav said before and say now that the "Restructuring" was not going to significantly bolster Amatuer Radio at ANY level.

Indeed, the same "surge" that followed "Novice Enhancement" and "Codeless Technician" followed the "Restructuring" event, but it has already started to ebb.

>Sorry, old fly speck, but my analysis is no more "mistaken" after
>restructuring any more than it was "mistaken" before.

Hmmmm......Jim has not, to my knowledge, made any "old fly speck" type comments vis-a-vis Lennie, but here we have Lennie invoking the "perjorative" factor.

In a week he'll be asserting that HE is the victim and HE would never do anything like that.

Yeah....right.

>What YOU WANT is to keep the status quo as much as possible,
>to keep the Faith in what all Good and Real hams "should" think,
>"must keep" as a "moral" and (even) way of life.

No, that's not "what he wants', as his countless other posts have made evident. It's what YOU want to believe, though, as that and ONLY that would substantiate you lying.

>I'm not going to
>do that since the environment is changing, the paradigms are
>changing and evolving. I don't give you twenty cents for your
>paradigms of the olden times.

Yes, things are (always) changing. But your assertion that Jim wants things to stay "status quo" are foolish. Not unexpected, but nonetheless foolish.

>Bullshit.

Lennie is reminded that his posts are a prime example of EE technicians everywhere.

>You are trying to act like Management. You WANT
>certain conclusions and, by Hiram, you are going to get it.

And YOU don't? HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! ! !

>The trend of newcomers going to Technician was there before
>restructuring. It continues.

Hmmm....given the facts that the Technician conveys almost all Amatuer priviledges anyway, this is unusual....WHY...?!?!

>REAL engineers challenge bad decisions in "open court" of
>design review meetings or by going to other companies.

Oooops...here we go again..."REAL" engineers and why they are sooooooo much more well equipped to be "us".

>Avocations are NOT engineering.

More proof positive that Lennie the Licenseless is NOT any kind of an engineer. Speaking in "Absolutes".

One cannot persue engineering pursuits as an "avocation"...???

>All Miccolis has "shown" is a desperation to keep the status quo,
>including keeping all the old myths alive.

And all you can do is assert that others are trying to keep undefined "myths" alive, NOT render scientific or mathematical facts.

>Geez. A rather pompous way of trying to say Miccolis is the only

>one correct.

Kinda like how YOU assert that YOU are always correct?

Yeah...RIGHT.

>REAL engineers deal with facts, reality, environment, social climates,
>public opinion, quality, and, certainly, some numbers.

Which again leaves any engineering credentials that you may have or claim to have in doubt. You pretty much ignore all of those in favor of your unfounded rants.

> Lots of the
>things that begin an engineering project developement aren't Divine
>or cast in everlasting cement.

A strange comment, coming from someone who routinely exerts "absolutes" when trying to make HIS point.

>Long-time conservative hams are still stuck in
>their time-warp of "knowing what is best for newcomers" when all
>they are doing is making newcomers do the same as they did...for
>no reason other than making them go through a Hazing Ritual.

Another lie repeated for perpetuations sake.

Those of us who are INVOLVED in REAL Amateur Radio know better.

UNLIKE Lennie the Licenseless Anderson.

>Buzzwords and bafflegab. Heck, those aren't even current buzzwords and
>bafflegab. Get with it, Len - "paradigms" is an '80s management buzzword.

Of course it is, Jim. When one reviews most of Lennie's "experience", it seems to conclude in "1980-something", and certainly not past early 1990's. It's "Y2K and then some", but the march of time does not affect the static mind.

>Real engineers are not bullied.

But is would appear that some people alledging to BE "real engineers" are. Lennie, in particular.

>Nobody denies that, least of all me. Why do you spend so much bandwidth
>repeating the obvious, Len?

Because someone once said that a lie oft repeated is soon accepted as truth. Lennie believes that. He lives it. He prays for it to be true.

>Try admitting your mistakes instead of attacking the messenger.

Oh yeah...like THAT would happen!

Problem is, that's playing into the hands of the down-dumbers since then only they will be in control of the League..

I prefer to hold their toes to the fire and sharp objects to their rears, and make Ed uncomfortable that he can't counter my facts and that his are lame- no one ever tries to memorize 1000 questions and answers, they do it in very managable increments. But his assertions sure sound logical, don't they?

73 and happy day after Easter

I have noticed that everything Lenn posts is ancient history. I had a neighbor (he has since passed on). No matter what we talked about, he had to regale us with some history lesson that he personally was involved in. If memory serves, he was there to advise Lindbergh on his trans-Atlantic flight :-). After awhile we just nodded and smiled are realized there are those that can't let loose of the past because they have no present and certainly no future. Our Upsyoursfurher Anderschmidt is the poster boy for the "In my days" crowd.

> The point was made by you several times that the Mustang was NOT in service at the beginning of the war. Lennie felt it necessary to exert some sort of "expertise" by regaling us with the registration numbers of the Mustang prototypes and NAA/Rockwell ownership history.

Lenn never seems to let facts get in the way of a good cut and paste item.

BTW, I'll be a Dayton. Have a booth, actually 2 in the upper corner of the outdoor flea market. Nothing really for sale, but it's a great parking spot and you don;t have to walk to far to bring some purchases back to the car.

I'm looking forward to meeting the Lenn at his home QTH. Made the flight reservations from McCarren to LAX, although I am tempted to fly into one of the surrounding smaller airports on my own. I went out and bought a new digital Video camera. Fits in the palm of one hand. I plan on recording this meeting. Vegas odd are 3 to 5 on LennieNoShow

Does learning the morse code make one more considerate of others? Does it teach one how to limit his or her bandwidth? Does it impress the proper procedure for voice identification or how to handle emergency procedures?

I have had an extra class license since about 1970 and been a ham since 1958. I checked one day and all of the trash talking, rude and obnoxious guys on 20 and 75 meters had general class or higher licenses - that was before the FCC "dumbed" down.

Many of the biggest jerks had extra class licenses and assumed they were better than everyone else.

Many of the codeless tech's I talk to on 2 meters are caring, considerate, thirsting for knowledge and participate in public service events - which is the justification for our existence.

Seems like the biggest threat to ham radio are not the newcomers - but the old guys who still know morse code - which I am.

yodoc@aol.comnospam (Larry Roll K3LT)
shared these priceless pearls of wisdom:

->If the Marine VHF band is being trashed, then Riley and his
->counterparts who have control over that service need to get out there
->and make some pretty severe examples out of the worst offenders --
->and do it quick.

Larry --

Before you do that, it might be well to get the attention of the anal retentives in the FCC that assign certain frequencies to certain operations. We have the same problem in the aircraft band -- 760 permissible channels and ONE assigned to "incidental communications", 122.75. That sucker is so crowded on a nice weekend that some operators take the law into their own hands and go the "good buddy" route on 123.4 and 123.45 which just drives the legitimate users of these frequencies (flight test stations) up the wall.

Not being that well versed in 80.373, I don't know if there is a legal "incidental" channel where you can talk about almost anything that you thinks needs saying, but there certainly needs to be one or two. You may not think idle chatter about whether the 49ers are going to beat the Jets this weekend is subject matter for "serious" radio, but others do.

Understand what I say -- I do not advocate turning one channel or group of channels into a garbage-mouth situation, but unless there are well-defined "incidental" channels that one can legitimately use for party-line gab, the whole band gets thrashed.

If Riley wants to nail some bastard that is setting off the emergency channels, I'm all for it. But first we give the ratchetjaws some legitimate place to go.

Funny comment coming from a self admitted CB Radio pirate operator. A quick check of your past posting history would establish that little fact without a doubt Tim. Your web page boasting about your activities got changed. Looks like you can't take the heat or are you just a wee bit worried about getting busted? You also forgot to remove references to "Knight Patrol #82", a CB Radio organization which sanctions illegal operations on 11m, which also helps to cast doubt on your creditability too.

I also put the question to you about bootlegging on the Ham H.F. bands several times, since your old web page clearly showed you were operating a modified Yeasu FT-840 rig. Yes your old web page got posted here as an example of a pirate CB operator so you can't claim your are not. You never did answer that question publicly. So whose, or what, call sign(s) were you spoofing when operating without a proper license on our bands?

Some months back you were also making inquires, on the CB news group, in to operating on the so called "Echo Charlie" frequencies too. If you have operated there you most likely have been else where too. Band plans, licenses, and Part 95 rules don't mean a thing to you. Did you also forget about your posts some weeks back asking about a mobile amplifier to go with a mobile CB rig you wanted? So you have the nerve to show up in a group of people, who play by the rules and operate within the limits of their license, and want to complain about some people who take you to take task for your self admitted illegal operations. Get real. I don't know and I don't care who is the responsible party(s) for the rash of forged posts in the other news group, but the criticism you get is well deserved.

>From: "Lamb" k7fm@teleport.com

>Seems like the biggest threat to ham radio are not the newcomers - but the
>old guys who still know morse code - which I am.

The biggest threats to ham radio have nothing to do with Morse code. They are spectrum threats, RFI, tower ordinances and similar things.

Even in this context, it is not knowing, or not knowing, code that drives the old timers and newcomers alike to demean each other. Fortunately, most newcomers learn pretty quickly not to follow the lead of those who would drag down ham radio.

>our own good".

The ARRL-Bashers are again in full spring bloom!

A few inbred UnaBashers regularly show up here bashing ARRL, CQ, Morse Code, CB, Wayne Green, Technicians, Extras, CW, or some other random subject or group that pissed them off this morning.

Most of us view them with some level of disdain, but others view them with admiration and would like to emulate them. For those who'd like to refine their bashing efforts, I thought I'd post some rules that they (or you) could follow to become a really 599+, full gallon, state-of-the-art UnaBasher.

Rules for Successful Bashing -

1. Be anonymous like W2DNE. Most of us know who you are anyhow, but you'll impress Twistedhed and KC8JBO, and piss off Steve to no end.
2. Use 10% fact. 90% suggestion. The facts will lend credibility to your unfounded suggestions.
3. Use a lot of macho-meaningless tag-lines like "An America Not Preapred For War In Peacetime Will Not Know Peace In Any Time." It will get you the knee-jerk-redneck vote, especially if you can't spell all that well.
4. Use two or more aliases to simulate a discussion. But be careful, the 'pit bull' tries this, but is always betrayed because all his messages come from the same IP address. Now he's discredited and gone.
5. Identify the "gurus" on the newsgroup and suck up to them.
6. Give the appearance of being open minded.
7. Be bold in your statements. Dummy newbies follow strength.
8. Write headlines in caps with catchy statements.
9. Don't worry about being labeled a "Basher". Newbies won't know your history.
10. When identified put up a brief fight, then back off. Return in a week unless your foe is a weak in reasoning powers.
11. Form your bash as a question, not a statement. Like "Does ARRL hate technology?", or "Why can't most Extras figure out Ohms law?" People can refute your statement, but nobody can answer such dumb questions.
12. Highlight a lot of credentials totally unrelated to the subject. For example "NASA Certified Solderer" in a nursing topic, or

"LPN" in a radio topic.

13. Bait the target into personal debates putting their focus/efforts on you and not the facts. Divert their attention from facts. Facts are your enemy.
14. Do not fall for challenges on the truth of what you are saying. Bashing is a game and you are playing it with your own rules. Ignore embarrassing questions which betray your lack of research, or call the questioner a Nazi or a liar. (See Anderson and Robeson for instruction.)

Your are a:

Grade "B" UnaBasher:
If you post lots of old news, respond to all positive posts with a negative side. Never respond to being called a Basher.

Grade "C" UnaBasher:
Very good way with words, always claims to be your "friend" taking the positive poster into confidence, sucks up, and then uses the relationship to bash somebody else.

Grade "D" UnaBasher:
Needs to learn the basics about being convincing when making a negative statement. Has no anonimity whatsoever, and tends to use quotations of others (preferably of dead people), rather than original thinking to make their point.

Grade "F" UnaBasher:
A complete idiot, most readers are not convinced he knows anything about amateur radio in general, let alone the current topic of conversation. The type that says something "sucks", but gives no rationale, shows up every so often but no regular schedule.

>should stop being a learning tool.

>Now, as to your MIT analogy, first, I don't believe that you obtained an MIT
>degree for a boxtop and an addressed envelope. Can you post some details?

I was being F-A-C-E-T-I-O-U-S, Ed.

Do you REALLY believe that >>I<< believe we should drop any requirements that would require LEARNING...?!?!

>Second, do you think that MIT should award a degree to someone who did not
>pass his or her exams if he or she worked really hard at trying?

Get a bit "happy" with communion wine this weekend, Ed?

>It is not a matter of work, it is a matter of meeting the requirements.
>Whether someone did so easily or with great difficultly cannot be measured.

Argue the semantics of it all you care to, Ed. For MOST people (granted...NOT all), learning requires SOME degree of effort. Some more than others. And further granted that for some that degree is minimal, almost recreational in nature.

Would I want to HAVE to sit down and re-study for my Extra...??? Not really.

WOULD I do it...?!?!   In a minute! It's a matter of "what would you do to obtain something you valued"...???

Actually the least considerate individuals in all of ham radio are
the rabid pro-code testing folk who worship the Morse Code Creed�.
Dropping Morse code testing from the ARS is like dropping the Virgin
Birth from the Christian religion.

If work was required to get a degree, I never would have gotten my BSEE.
I don't believe in work. I believe in getting things accomplished with
the least amount of effort. It's called efficiency.

The Easter Bunny does exist, Jim. I bought one for my grandson. Did you know
that Easter is an ancient pagan German fertility goddess?

>   Argue the semantics of it all you care to, Ed. For MOST people
>(granted...NOT all), learning requires SOME degree of effort. Some more than
>others.

Most of the conversations about the exams seem to emphasize the "work" aspect of the value of the test material, not the learning aspect. You chose the word "work," not the word "learning." The difference between the two is more than "semantics." If words don't mean what words mean, what do they mean?

>WOULD I do it...?!?!   In a minute! It's a matter of "what would you do
>to obtain something you valued"...???

I do not believe that today, starting from scratch, I would learn Morse code to 20 wpm to obtain an Extra Class license. I can think of many other things I would not do to obtain a license.

And all that aside, the value to me of the things I have done with the license I was given has exceeded the value to me of the tests I took to get that license.

Unfortunately for you, the FCC was no one of those "others".

The FCC stated in its Report and Order (FCC 99-142) for WT Docket #98-143 that:

(a) "the public interest will best be served by reducing the telegraphy examination requirement to the minimum requirement that we have found that meets the Radio Regulations" ;

(b) "an individual's ability to demonstrate increased Morse code proficiency is not necessarily indicative of that individual's ability to contribute to the advancement of the radio art" ;

(c) "such a license qualification rule [Morse code exam] is not in furtherance of the purpose of the amateur service and we do not believe that it continues to serve a regulatory purpose" ;

(d) "the amateur service is fundamentally a technical service, the emphasis on Morse code proficiency as a licensing requirement does not comport with the basis and purpose of the service" ;

(e) "reducing the emphasis on telegraphy proficiency as a licensing requirement will allow the amateur service to, as it has in the past, attract technically inclined persons, particularly the youth of our country, and encourage them to learn and to prepare themselves in the areas where the United States needs expertise" ; and

(f) "telegraphy proficiency is not a significant factor in determining an individual's ability to provide or be prepared to provide emergency communications" .

Please point to ANY federal licensing requirement that directly
or indirectly addresses any need for the applicant to expend
"work" to obtain the license.  Work, as a product of itself,
is not now nor has it ever been an amateur licensing
criteria.

As usual, another fact that is inaccurate.
The league vote was to NOT oppose an effort to remove all
code requirements. The league did NOT vote to proactively
seek (i.e. push) such a change.

A good citizen is expected to report crimes when he/she witnesses them.
In some cases it's a crime not to.
I'm sure the freeband criminals would prefer we didn't.

They were volunteers but they were not off-the-street civilians nor
were they mercenaries in the usual sense. They were hand-picked by the
USAAF brass as some of the best of the best of our active-duty fighter
jocks, they were ceremonially excused on paper from the USAAF and
shipped out to serve in the Chinese Air Force. They became USAAF
pilots again when the U.S. finally joined the batle in SE Asia. Mild
scam with a justifuable purpose.
>

I have a cousin who was developing infrared and stereo
photo-reconniasance methods before the U.S. got into the war. The
Brits dressed him up as an RAF recon officer. He flew some large
number of combat missions over Nazi Germany in Lancasters long before
Pearl. We had a lotta guys under fire before Pearl.

By the time the war ended the U.S. Navy had birds like the C-V Corsair
and the Army had gotten the Lightning ironed out and Zeros became the
guests of honor at mass aerial turkey-shoots. If the war had lasted a
few more months they would have gotten to meet the Grumman F8F Bearcat
in volume, often referred to as "The Chainsaw". The technologies
embodied in the Bearcat are so far ahead of any the japs had it isn't
even a discussion. One of 'em named Rare Bear which was was modified
for racing holds the world speed record for propeller-driven aircraft
at 528 mph.

There already are plenty of legitimate places for those "ratchetjaws" to go, Jim. What about CB, GMRS, and so forth? There are dozens of frequencies just sitting there waiting for people who want to run their mouths. It is absurd to suggest that space should also be made available in the aircraft bands, or the marine bands, for those very same people. Those bands (marine and air) were not designed for "ratchetjaws," while those other bands (CB, GMRS, etc) were. In fact, if we're going to set aside a few dozen frequencies on each band for "ratchetjaws," then why even have bands like CB, GMRS, and so on?

Dwight,

While it is not *exactly* the same thing, but I wonder how much time and money is spent responding to accidental activations of EPIRBS? As you likely know, we (CAP) spend an inordinate amount of time responding to ELTs that turn out to be the result of, perhaps, a hard landing. Like the false distress calls, each one must be responded to and dealt with under the assumption that it is the real thing.

It escapes me why people think that calling out a false Mayday is funny. Illegal operations *should* be a concern of everybody.

The dweeb who wrote that couldn't have a clue as to what ham radio is even about. Sort of like you.

>
> (b) "an individual's ability to demonstrate increased Morse code proficiency is not necessarily indicative of that individual's ability to contribute to the advancement of the radio art" ;

Sure makes him one hell of a more proficient communicator, though. Not that you'll eve understand that.

>
> (c) "such a license qualification rule [Morse code exam] is not in furtherance of the purpose of the amateur service and we do not believe that it continues to serve a regulatory purpose" ;

Translation: " We are doing what we believe will best serve our own interests in lessening the testing and administrative burden on us, not to mention that dastardly Morse waiver headache..."

>
> (d) "the amateur service is fundamentally a technical service, the emphasis on Morse code proficiency as a licensing requirement does not comport with the basis and purpose of the service" ;

Yeah, Right! Fundamentally a 'memorize the questions and answers' service.

>
> (e) "reducing the emphasis on telegraphy proficiency as a licensing requirement will allow the amateur service to, as it has in the past, attract technically inclined persons, particularly the youth of our country, and encourage them to learn and to prepare themselves in the areas where the United States needs expertise" ; and

Right! Just look at the influx of geeks we did NOT get as opposeds to all the freebanders we DID.

>
> (f) "telegraphy proficiency is not a significant factor in determining an

> individual's ability to provide or be prepared to provide emergency

The acquisition of technical knowledge represents work, whether the applicant got it in some career training program or in selfstudy of technical material for the purpose of amateur license testing. Unless, of course, he just studies the pools for the word associations. Then it is memory work.

I remain skeptical. Of course my version of the Easter Bunny may be different from yours.

> I bought one for my grandson.

That's not the one I meant. Does it leave eggs?

>Did you know
>that Easter is an ancient pagan German fertility goddess?

My information is that the word "easter" derives from "eo-star", a northern European spring fertility festival. We may be saying the same thing two different ways.

Many of the symbols and customs surrounding Christian holidays have their origins in pagan rites. The eggs, chicks, bunnies and other Easter symbols are right out of spring fertility festivals. The Yule log and Christmas tree have similar origins.

When Constantine, for whatever reason, made Christianity official lots of things got co-opted. Imagine the local version of Father Emil down at Our Lady of Perpetual Responsibility a Sunday or two after Connie dropped the bomb. 'You got an Earth Mother, padre?'

Taking the easy path of co-opting the locals is probably the only way to get the job done. But it does confuse hell out later generations. Given that Halloween is now second only to Christmas for selling stuff, maybe later generations deserve it.

Jim:

I do not disagree with this philosophy. I've long held that there needs to be adequate, if not abundant, spectrum available for what you so accurately describe as "incidental" communications. Having said that, I must admit that I am not, and never have been, a Marine VHF user, but I thought there *was* adequate channel space for incidental comms. I know that there are dedicated channels for emergencies and ship-to-shore phone patches, and I believe that *any* deliberate interference on these channels should be adequately policed. I'm just surprised that such an important service *isn't* being adequately policed. In my own town (Dover, DE) I've seen several vehicles (not boats) equipped with the distinctive antennae used in Marine VHF. These are vehicles that don't even have a trailer hitch on them! I'm sure that this band is being systematically bootlegged by CB'ers seeking a cleaner, clearer, quieter venue for their activities.

I think its time to provide "fill in the application blank" type of access to the amateur 2m, 220, and 440 bands. There's no longer any point in maintaining the fatuous farce of license testing for these frequencies, which are almost totally dominated by off-the-shelf handie-toys and plug-and-play mobile rigs, and operators who can barely comprehend the PTT switch, much less the operational theory behind them. GMRS isn't the answer because the repeater infrastructure isn't there.   I exclude 6m from give-away licensing merely because it has many of the properties of 11 meters, namely reliable global propagation, which deserves the protection of more rigorous license examinations. I exclude 1.2 GHz and up because of the greater physical hazard of high power RF at those ranges which would require a more technically qualified user to prevent overexposure. Opening up the "mid-range" V/UHF bands would give the general public all the opportunity they needed to push a mic button and talk; and since they'd be licensed, required to use call signs, etc. there is still the enforcement sword hanging over their heads, unlike 11-meters.

We've already reduced amateur license testing to the status of a joke; so why not get a real laugh and give the microphone jockeys their dream-come-true?

Ed:

I find it interesting that whenever a pro-coder tells the truth about the Morse code itself, those who use and enjoy it, or those who couldn't be bothered to learn it, they are immediately faced with a chorus of accusations such as the above. In the meantime, the fact that the no-coders have heaped plenty of gratuitous abuse on the pro-coders is conveniently overlooked. Like all liberal, socialist Communists, the NCTA adheres to a strict double standard.

> Fortunately, most of us who love and enjoy Morse code are able to point out
> that such conduct is not a result of the "hard work" that you put into learning
> the code; it is a personal choice that, fortunately, most hams do not take.

The truth is, learning the Morse code really isn't "hard work" at all. It is just something which doesn't provide the same level of instant gratification that comes from the voice modes. This unwillingness to defer gratification -- the unwillingness to invest the time and dedication required to gain a valuable communications skill -- demonstrates a lack of intellectual maturity on the part of the NCTA. Unfortunately, new hams coming into the service after Restructuring have no option but to be painted with the brush created by the lazy majority who whined for, and received, lowered licensing standards.

This is the "English" language, Ed. Even the "f" word can have a dozen different applications, depending on the context of the conversation and the frustration or anger of the person uttering the word.

>I do not believe that today, starting from scratch, I would learn Morse code
>to 20 wpm to obtain an Extra Class license. I can think of many other things
I
>would not do to obtain a license.

You don't HAVE to get to 20WPM now, Ed, ergo it's moot. However if I HAD to do these things to get a license or STAY licensed, I certainly would.

As Lennie the Least would say...."Your mileage may vary".

>And all that aside, the value to me of the things I have done with the
>license I was given has exceeded the value to me of the tests I took to get
that
>license.

Then WHY would you NOT do the things necessary to obtain one today? There are precious few things in life anymore that exceed our expectations or give more than we put in. I would think this would be a "no brainer"...???

No replacement is necessary to delete a regulation that is
unnecessary, not in the public interest,and not in conformity
with 5 USC 706. The Morse code test rule is invalid, but exist
only because of ITU rule S25.5 and government inertia.

The newcomers have no choice about what requirements they can meet to get their
licenses.

The wielder of that brush is the one making the choice on whom to paint. The
part I don't quite understand is who was it that actually gave brushing power
to those doing the painting?

>with 5 USC 706. The Morse code test rule is invalid, but exist
>only because of ITU rule S25.5 and government inertia.

>Larry KC8EPO

In this case, the 'Morse' issue had nothing to do with what was
"in the public interest," ad infinitum. Easing of requirements,
code and theory, was the issue, and was a done deal before the
proceedings even started. As Vic Clark initially warned in 1982,
and as the FCC showed with their R&O. Much to the surprise of
those who simply thought this was just a 'code' issue.

"And the FCC cheerfully furnished the required rope."

Regards,
Vince, WB2EZG

It is fortunate for ham radio that FCC still believes that
the amateur radio serves a public interest.

No other radio service uses Morse code proficiency as a license requirement.

> > (c) "such a license qualification rule [Morse code exam] is not in

Correct translation, we change our rules to bring them into compliance with
law.

What specifically was "semantical" about his question? Trying to dismiss what he says as being mere semantics is a pretty weak argument.

>> Work, as a product of itself,
>>is not now nor has it ever been an amateur licensing
>>criteria.

>   Waste of bandwidth, Bill. I expect better of you.

Dismissing it as trivial enough that he shouldn't have said it, but not trivial enough that you shouldn't say that he shouldn't have said it is even weaker.

Is this as close as you will get to ceding the point to Bill?

Same for Bernie Fuller. In fact, my Director is the one who moved for a
recorded vote.

WHY would any director want to keep their vote on the issue secret?

Only Marine Channel 16 is sacred but not even close to being as sacred
as 121.50. Marine 16 is both the emergency channel and the general
calling channel. Estabish contact on 16 and take it somewhere else
quick. Things get pretty "loosey goosey" from there. There are some
CG, general gov't and phone service freqs which need to be avoided.
Not really much in common with airband ops. Boats doan need to tune a
neighborhood CG clearance delivery freq to find out when it's their
turn to shove off from the dock and get undeway. There's a lot less
traffic and the operating radius in much smaller.

> You may not think

There's only one way to find out, ask for the freqs and get the
FAA/FCC rulings. They ain't going to just pass 'em out.

I don't know any freebanders, Dick. If I did, I would try to recruit
them to ham radio. I regularly try to recruit the local high schooler
CBers to ham radio and donate my QSTs to the high school library. You,
OTOH, seem to want to keep non-hams out of ham radio so your share of
the sandbox will be bigger.

Vic Clark probably also thought that automobiles would get faster and more efficient thus obsoleting the 1982 models. What he was predicting was scientific progress. While all other forms of electronic communications were getting easier and more accessible, freezing the amateur radio requirements would have been a sure way to sound the ARS death knell and bury it in the sands of time. Why not just require radio amateurs to use tubes and prohibit them from using transistors - same thing.

Nobody is objecting to the truth, Larry. We are objecting to the abusive
ad hominem attacks, e.g., being called a "baldfaced liar".

>their dream-come-true?

That's tantamount to letting the camel put his nose in the tent.

An Arab was out on the desert with his camel. He saw a huge sand storm coming. He made the camel lie down and then erected his tent so he could be out of the flying sand and the harsh wind. The camel stuck his nose under the flap of the tent and said "Oh, Master. I can hardly breathe with all of this sand and wind. May I put my nose inside the tent so I can breathe?" The Arab was a kindly person and allowed the camel to put his nose in the tent. During the night, the Arab awakened to find that he was being crushed by the camel. He kicked the camel and tried to make himself comfortable. After a while the camel said "Oh, Master, If thou art crowded, thou canst leave".

>Date: 04/16/01 1:08 PM Eastern Daylight Time

>The ARRL-Bashers are again in full spring bloom!

Yes, they are. Some of them are not as apparent as others, though.

>1. Be anonymous like W2DNE. Most of us know who you are anyhow, but
>   you'll impress Twistedhed and KC8JBO, and piss off Steve to no end.

Or you can be "known" like Hans. Hans has a nasty habit of making snide and rude comments about others even though things are done for him on a "personal courtesy" basis. Like responding to his "eQSL" submissions because you "know" him, and then take flak over it because you make it known you prefer not to.

Hans is selfish that way.

Then you can use ISP's which won't allow anyone to reply to you via e mail, but then load up OTHERS mail boxes with YOUR responses...just like Hans.

>3. Use a lot of macho-meaningless tag-lines like "An America Not Preapred
>   For War In Peacetime Will Not Know Peace In Any Time." It will get
>   you the knee-jerk-redneck vote, especially if you can't spell all
>   that well.

Meaningless to you, Hans, because you only marked time until retirement. Some of us actually had to do something that WAS meaningful while we served.

>6. Give the appearance of being open minded.

Kinda like Hans. But then Hans is two faced anyway and we take that into account.

>12. Highlight a lot of credentials totally unrelated to the subject.
>   For example "NASA Certified Solderer" in a nursing topic, or
>   "LPN" in a radio topic.

I guess we can reload "signature lines" for each and every NG we participate in just to please Hans, but then why? Hans is not worth THAT much effort. Matter of fact, he's hardly worth THIS effort, but again, he expects it so who am I to deny him his happiness?

>13. Bait the target into personal debates putting their
>   focus/efforts on you and not the facts. Divert their
>   attention from facts. Facts are your enemy

Kinda like Hans is doing with THIS post, or the "Little Guppy" one he wrote for my benefit.

Just Like his mentor, Lennie the Liar Anderson, Hans has a real bad habit of applying the "Do What I Say, Not What I Do" twist.

>4. Do not fall for challenges on the truth of what
>   you are saying. Bashing is a game and you are playing
>   it with your own rules. Ignore embarrassing questions
>   which betray your lack of research, or call the questioner
>   a Nazi or a liar. (See Anderson and Robeson for
>   instruction.)

And Hans nis challenged to prove that my assertions of Lennie's lying are NOT true.

>Grade "C" UnaBasher:
>Very good way with words, always claims to be your "friend" taking the
>positive poster into confidence, sucks up, and then uses the
>relationship to bash somebody else.

Yeah...I'd give you a "c" with some conditions, Hans...but it would be a bit shaky.

>If this or other posts made through NewsOne.Net violate posting guidelines,
email >abuse@newsone.net

Close, but no cigar....but it's a thought.

No 73 for Hans.

"An America Not Preapred For War In Peacetime Will Not Know Peace In Any Time."

People used to get their exercise hunting and gathering while trying not
to starve to death and not get eaten themselves. Now we get most of our
exercise by having fun. We have become so efficient in meeting our needs
with so little effort that we have lots more leisure time. I have *always*
believed in working SMARTER, not HARDER. Most Americans are working smarter
than their grandparents, not harder than their grandparents. When I was born,
my Dad was working 12 hours a day for one dollar per day. I am a lot lazier
than my Dad. My stock options at Intel were much easier and more efficient.

>> ....invoking the "perjorative" factor.

>Hell, Steve, you can't even *spell* "pejorative"!

Thanks for the proof read, Hans. I guess some of us have more time on our hands than others.

>Most everyone in the BSA can splell "prepared", but apparently not everyone
>in the USMC. It figures!

But...but...but HANS! You are the one who has repeatedly denied any USMC/USN "conflict" and yet here you are perpetuating it.

And by the way...if I were going to "zing" someone in a newsgroup posting about erroneous spelling or grammar, I think I would be a bit more cautious about hitting the "SEND" or "POST" button before I was sure that my OWN post was free of spelling errors.

But again, thanks for YOUR proof reading. I guess there will come a day in my life when I can't find anything else to do but use those errors to try and create an aire of invincibility, too.

Maybe the rivers in Minnesota aren't the only thing that are above flood stage, Hans?

Steve

You would have been happy about that, I'm sure, Cecil. After all, you've said there's no longer any need for hams to know basic electronics. Just basically rules, regulations, and of course...safety.

>From: n2ey@aol.com (N2EY)

>WHY would any director want to keep their vote on the issue secret?

I don't know; Tom has never declined to discuss his views or his votes with me. He knows I vote, too. :-)

There is only one valid reason I can see that the Board could choose not to air the votes of individual Directors. The Board has a policy that all Directors will support the final votes of the Board. Even those that voted against the S25 position, or would have seen it written differently, will support the end result, as part of an organization. I could see some difficulty in an individual Director saying "I voted against it, but I support the policy of the organization."

Of those that voted against it, it is still unknown why they did so. Did they feel it went too far, or not far enough? If I were on the Board (Director Hare -- does that have a ring to it, or what?), I may have voted against the proposal as written.

73,
Ed Hare, W1RFI

> this band is being systematically bootlegged by CB'ers seeking a
> cleaner, clearer, quieter venue for their activities.

Along the Gulf Coast from Texas to Florida the Shrimp Season is getting ready to begin. Along with this activity comes the "Kitchen Coastal" set ups and the indiscrimate use of 11/10 meters, 135 to 173 MHz, 220, 440 and The Good Lord only knows what else. The Explosion in this
phenomena was spurred on by the proliferation of "Modifiable" Radios which allow expanded frequency access. The Modifiable 2 meter radios are the
most popular since they can cover the Marine Band with 50+ watts! I have
heard commercial fishing activities as low as 136 MHz with the MARS/CAP Band being popular since it "appears" to be a quiet area. The 2 meter amateur band has its share of bootleggers but most activity seems to be driven away by any legitimate activity (for the most part).

Some stuff is scrambled with simple inversion scramblers being popular. The Marine Band (VHF) are a mess after the license requirements were lifted. The Cowboys have taken over and the appearance of no-enforcement has let radio cowboys run wild with the appearence of Land Mobiles, Kitchen Coastals and boats with high powered Modified Amateur Gear!

The Coast Guard is swamped and they don't have the time/resources to police this problem and the FCC is basically throwing out the Enforcement Letters to Amateurs and the bootlegger/freeband crowd is ignored, or so it seems.

The simple fact is: Licensing kept the BS under control, the FCC in the Name of "DEREGULATION" has let the Camel put his nose under the tent and allowed "Licnesing by rule" to take place with no method of accountability. (CREDIT TO HANS, K0HB, for the Camel story)

Congress should be the ones to be held accountable for this mess and the morass they caused by cutting funding of the FCC in years past. Since any monies FCC collects are put to the Federal Treasury and not allocated to the FCC, there is no incentive to enforce any problem areas unless political pressure is applied. Let the Fcc have a portion of the Fines they collect and enforcement would have some teeth.

>I wish to debate the methods used to derive conclusions. You don't want to
>debate. All you want to do, Len, is call names and repeat the same mistakes
>over and over.

Nope. I stated the source of my observations, gave some numbers.

From there on, Miccolis wanted a Battle To The Death in a
newsgroup. :-)

>Your "belief" in something does not make it a fact. I know people who believe
>in the Easter Bunny, but their belief does not mean I must agree with them.

There is a common thread among long-timers here in which
the True Beliefs of US amateur radio are stated as if reading
from a hymnal. See also Standards and Practices of the
1930s and 1940s. Same book, different cover.

>Another example of faulty process on your part, Len. You lump together all
>classes of amateur license with any HF privileges at all, EXCEPT Techncians
>with HF. But there is a BIG difference between the minimal Novice HF
>privileges
>(tiny slices of four HF bands, and only one mode on three of those bands)
>granted and those of the General and higher classes. (Generals have all
>privileges on 5 of the 9 HF/MF amateur bands, and the majority of the
>spectrum
>in the other 4 bands. And they have all mode privileges. The other classes
>are even better).

A True Belief labels as heresy anything against the True Belief, therefore all who express such "heresy" are "faulty," "in error," or "mistaken."

I was simply observing tabulations of US amateur radio license class changes since the end of June 2000 to the end of March 2001. Miccolis considered this "faulty," "mistaken," "error," etc. because I did not include changes that were not available, not tabulated.

>You agree, then, that your work is faulty. OK. Why should anyone accept your
>faulty work?

No agreement on "faulty work." I gave my sources and numbers. From there on a True Believer came out with charges of "fault," "error," and "mistake." :-)

>I don't like analysis METHODS that are faulty. Such as counting months twice,
>which you did.

Nope. Was counting only 10 months, as stated.

There was nothing wrong with my method. Some, like Miccolis, didn't like the results.

> Or ignoring the reclassification of Tech Pluses as Techs upon
>renewal, which you also did.

That's true. However, despite Miccolis' following demand of "fault," Miccolis did not adequately explain how many such reclassifications there were or their impact on my numbers.

>Or assuming that NO new Technicians upgraded in
>ten months, which you also did.

Those weren't mentioned. If there is "fault" in any analysis, then it is in Miccolis' failure to accept any observation that does not jibe with his True Beliefs.

>How do you know what I think? Can you read minds? Are you God? I don't think
>so.

I've never claimed any telepathic powers or divinity...not even to being some kind of "apostle" of a True Belief.

On the other hand, Miccolis keeps harping on "fault," "mistake," "error" based on nothing else but a failure to accept that this True Belief is not longer a creed of newcomers.

>What is really going on is that I have repeatedly shown that your analysis
>methods are faulty. So rather than correct them, or admit your mistake, or
>even try to defend them, you attack the messenger.

There was nothing "faulty" about the observation or interpretation.
The result of my observation may, to some (such as Miccolis),
appear to be heresy...therefore "faulty," "mistaken," full of "errors"
is repeated over and over and over and over again. Good "big lie"
technique in newsgroupieism.

>Textbook ad hominem. Which is faulty logic, too.

Nonsense. Repetition of "fault," "mistake," "error" does not
justify its validity.

>Buzzwords and bafflegab. Heck, those aren't even current buzzwords and
>bafflegab. Get with it, Len - "paradigms" is an '80s management buzzword.

Wrong. Error. Fault. Mistake. 1990s. :-)

>I didn't ask for it. All I want is answers to simple questions, but you don't
>give those. Because they are too embarrasing for you.

It appears Miccolis merely wants to prolong the issue by "loaded"
"simple questions." Good technique in newsgroupie battling. :-)

>How? If your numbers and methods are valid, explain and defend them against
>my critique. Show where MY analysis is faulty.

First of all, Miccolis started with a 12-month period beginning prior
to 15 April 2000. That would introduce errors for a post-restructure
observation (Miccolis wants to make the word "analysis" but
observation seems more semantically correct).

Miccolis refused to accept any buffer time in April or May 2000 in
order for FCC licensing and databases to become updated. At
one time Miccolis insisted that all must count all of April 2000
class data without giving any valid explanation.

Miccolis continues to ascribe everything in terms of "faulty,"
"mistaken," "error" etc. over and over and over again as if
that is a valid or justified counter-argument. Such is nothing
more than polite ad hominism.

> You haven't done that - all you do
>is edit out my proof of your errors and attack the messenger. Then you toss
>in some dirty words for some reason or other.

Miccolis' "proof" was considered in the obvious light of opinion at the time of trying to show that newcomers were somehow thronging to HF bands. My observation was simply on the class of license based on readily-available tabulations of publicly-available data. That data did not include precise numbers of changes in class over the 10-month period because such tabulations are no longer done at the website I used. Miccolis insisted that it "should be done" and then statedd that my observation was "faulty" because I did not use available data.

>Nope. I'm acting like a real engineer, who wants to see how the conclusions
>are derived, and who won't accept sloppy thinking and faulty handwaving
>processes.

Hmmm..."sloppy thinking" and "faulty handwaving." Is that the description of observation of tabulations of classes of amateur radio licenses over a stated period using information available to all?

>Worse yet, I won't be bullied into accepting something because somebody calls
>me names or uses scatalogical terms.

No one is trying to "bully" Miccolis...yet he is doing the same thing here with this (common to Miccolis) technique of "Battle To The Death" in long, long, long "critiques" charging "faulty," "mistaken," "full of error" statements. :-).

>>The trend of newcomers going to Technician was there before
>>restructuring. It continues.
>
>And as I have said dozens of times: NOBODY DENIES THAT!

I do not recall Miccolis saying that more than about five or six times. That is less than a dozen. [fault! error! mistake! :-)]

>> Further, against the grain of the
>>established ham conservatives, Techs are renewing as Techs.
>
>Most of them. Same as every other class. I've been renewing in the same
>license class for three decades.

Times well prior to April 15, 2000 are not acceptible in discussions about changes happening after April 15, 2000.

Bad "engineering," even a lot of "handwaving." :-)

>>Such is heresy against Conventional Wisdom (CW) of the
>>long-time ham conservatives.
>
>You said that - not me. Why do you deny that ANY of them upgrade?

Denial was not in any of my observations. :-)

Nor is the "explanation of what happens in a 'real engineering' environment" germane to any discussion of tabulated data of radio amateur licenses after April 15, 2000.

It would seem that Miccolis wanted to bring in a discussion from another thread involving "real" engineers, a false argument that branded anyone not state-licensed as Professional Engineers as being "not real" engineers. Invalid and irrelevant, although it did show the extent of trying to win this "Battle To The Death" on a subject in a newsgroup. :-)

>Real engineers don't fix what ain't broke. Real engineers don't reinvent the
>wheel. Real engineers don't accept things because somebody else says they
>"believe" those things.
>
>Real engineers are not bullied.

Ahem... "Real" engineers...who keep on receiving paychecks in one company...have to compromise to fit company standards. Or, if self-employed, do not try to tell potential customers that they are "wrong," "mistaken," "full of errors."   :-)

This forum is decidedly NOT any sort of "design review." Miccolis is not a "chief engineer" or even "senior staff engineer" "leading this 'design review.'" This forum is simply a discussion forum, free-form debate which usually takes on aspects of arguments and battles over Belief Systems of ethics and morality.   :-)
>
>> Avocations are NOT engineering.
>
>Many of them require engineering. When a ham puts up a tower, it better be
>engineered correctly, because if it falls down and causes damage, the fact
>that it's "avocational" doesn't mean a thing.

Irrelevant to the discussion-debate-argument subject. :-)

>> Amateur radio is an avocation.
>
>So? Your attempted diversion does not hide your mistakes or change my
>arguments against those mistakes.

There was nothing to "hide." No "mistakes" or "faulty methods" in "analysis" when the data source and conditions were explained in public in the beginning.

>The status quo is now one code test and three written tests.

True.

>The status quo is
>now that support for code testing is only kept alive by the treaty
>requirement.

Incorrect. All that has been said in regard to post-restructuring is that the FCC did not remove Element 1 (code test) due to ITU-R S25.5. Nothing at all was said by the FCC as to longevity of any code test.

>The status quo is that support for that treaty requirement is
>decreasing.

No. That is merely conjecture on Miccolis' part. There is no mention of any debate-discussion of ITU-R S25.5 in any agenda for WRC-2003. Until that happens the status quo of S25.5 is that it remains as-in.

>The status quo is that the code test will disappear shortly after
>the ITU meeting in 2003.

No again. Miccolis' sentence is simply a rewording of the previous sentence.

>They aren't? How many "newcomers" do YOU know? How do you derive such a
>sweeping statement? From your "beliefs"?

Irrelevant and unproveable by data. My conjecture has no "poll" or other data...no more than long-timer True Believers put up their own experiences as reasons-for-being of existing regulations.

>Nobody denies that, least of all me. Why do you spend so much bandwidth
>repeating the obvious, Len?

Why does Miccolis insist on "analyzing" each and every sentence in another's post?   :-)

>>radio amateurs are Technician class. The vast majority of that
>>class has not taken any morse code test
>
>Ahhhh - BUT SOME OF THEM HAVE! At least 7079 of them, and probaly many >more.
>Which means they are NOT all "noncodetested" or "non-HF licensees".

Please note what I wrote: "Vast majority" which does not mean "all." Vast majority is a subjective quantity but generally taken to mean more than half, usually more than three-quarters.

Miccolis' argument was shouted" "BUT SOME OF THEM HAVE!"
The word "some" is indeterminate, subjective, unquantifiable.

>Pure wish-fulfillment and speculation on your part, Len. Nothing else.

Speculation based on varied media and personal input.

>You
>don't know how many have taken the code test, so you ASSUME nobody has.

The exact, quantifiable numbers are not available on who took
a code test and who did not.

Note that I never wrote "nobody (of Technicians) had taken a code
test." Ergo, there can be NO "assumption" as charged.

>You deny the stated proof that thousands have taken the test.

Absolute nonsense, incorrect, faulty, and full of error statement.
No, absolutely NO such statement was made.

There is NO quantifiable data of any kind to state how many
radio operator code tests were failed, not taken, or anything
else. What the long-timer conservatives seem to insist is
that "thousands and thousands have taken a code test" as if
that "proves" something valid for any radio operator examination
in the future. Such a "claim" is based on OLD data of those
who have passed a code test. To remind everyone, this
subject is supposed to be about POST-restructuring, not some
"history" lesson.

>Of course. That's what they said. So? They said that 4 license classes was
>the best thing for ham radio in the NPRM, then dropped it to 3 in the R&O.
They
>had to issue an errata to the NPRM, and the errata had mistakes in it. They
say
>all kinds of things.

An NPRM, a Notice of Proposed Rule Making, simply outlines a
basis for Comment by interested parties. Final decisions are
explained in an R&O, the Report and Order.

"They say all kinds of things" is a non-sequitur about the FCC. The
FCC is the regulatory agency of US civil radio. All civil radio
licensees ("civil" in denoting non-government, non-military radio)
must obey the regulations of the FCC.

>Uh huh. Instead, they should buy YOUR "belief set", founded on hate of
>anything that you don't like.

Miccolis is again mistaken, faulty, and full of errors. I am simply
advocating a belief that a morse code test for an amateur radio

license is not needed for licensing purposes in regulation. The FCC agreed with that viewpoint in 1999 and in 1990.

>Who are you to tell newcomers what to believe? You can't even defend your own
>analysis processes here.

Who is Miccolis to tell newcomers what to believe? :-)

The only "defense" of a clearly-stated observation of post-restructuring license class changes was in regard to Miccolis' untrue, unproven, provoked charges of "mistakes," "fault," and "errors" which were not there in my posting..

>Try admitting your mistakes instead of attacking the messenger.

No problem. When I make a true error, I acknowledge it. I will not "acknowledge" any "false" errors charged by those who insist on responses that suit their opinions. Such is Management or Marketing technique, certainly not "real engineering."

In article <20010415163851.10479.00000088@nso-fa.aol.com>, n2ey@aol.com (N2EY), apparently in need of writing a very very long counter-argument writes:

>Do the vast majority of users of the Citizens Band Radio Service, as it
>exists today, obey the rules of that service?

As far as I can tell, yes. :-)

Have there been any "official polls" taken to "prove" one way or the other? If so, show the work.

Why does Miccolis ask? This is not the proper newsgroup to discuss citizens band radio.

>Would you hold up the Citizens Band Radio Service, as it exists today, as an
>example of how that Service should conduct itself?

No. There are far too few channels for the number of users based on reception in the Greater Los Angeles region. That is a subjective opinion based on the number of "heterodynes" heard on each of the forty channels.

>Would you hold up the Citizens Band Radio Service, as it exists today, as an
>example of how the Amateur Radio Service should be conducted?

No. Why would that even be a question, other than trolling?   :-)

Would Miccolis hold up US amateur radio service as the "proper" way to conduct citizens band radio service communications?
If so, why? Show the work.

Would Miccolis hold up US amateur radio service as the "proper" way to conduct Public Safety Radio Services, Aviation Radio Services, or Private Land Mobile Radio Services? If so, why?
Show the work.

The above is a prime example of truly juvenile posturing.
The Anonymous poster has no overt identity but can be
found out later if necessary. The demand to "meet" in
order to "prove" anything is worthless, bogus, indicative of
nothing but posting intimidation and a monumental ego
that defies rational discussion, debate, or argument.

There will not be any "welcome" to such an individual at
my home or anywhere else based on this idiot's demands

of physical confrontation.

There will be no "meeting" with an imaginary persona, an alias, a work of fiction, a will 'o the wisp no more tangible than a whiff of marsh gas.

If US amateur radio is based on such individual demands of "showing" anything through physical intimidation, implied or real, then it has passed beyond any reasonable "service" to any citizenry, licensed or unlicensed.

After hanging around this group for a while, I get the impression that there are a number of Hams who:

Are angry that the code requirement was dropped to 5WPM
Are angry at the test formats
Are angry at Technicians
are angry at the ARRL
are angry at the FCC
are angry at CB'ers
are angry at Freeband

Seriously, unless anger is an integral aspect of their persona, why on earth take part in a hobby that distresses them so much? I wouldn't have any part of something when I hated it.

Vincent Biancomano wrote:
> Why not just stay to the issue: easing of requirements.

I am staying with the issue, Vince. Using transistors is easing the requirements. Using tubes makes everything harder. If we want to make ham radio harder to implement, let's just outlaw solid state devices along with the commercial ham transceivers that use them.

The US is moving to easier implementation of all communications, Vince. That's the predictable result of scientific advancement. That you want to keep hams quagmired in the dark ages of radio is a pitiful attitude and a sure way to completely kill the Amateur Radio Service.

>>Do the vast majority of users of the Citizens Band Radio Service, as it
>>exists today, obey the rules of that service?

>As far as I can tell, yes.

     Further proof that you are an idiot.
```

You are again challenged to drive across town, or to any other locale within the "legal" 155 mile range allowed by Part 95 and then conduct a "legal" communication with Mrs. A.

>Have there been any "official polls" taken to "prove" one way or the
>other? If so, show the work.

Turn on a radio capable of receiving AM or SSB signals in the 26mHz to 28mHz range.

Connect an appropriate antenna.

Listen.

>>Would you hold up the Citizens Band Radio Service, as it exists today, as an
>>example of how that Service should conduct itself?

>No. There are far too few channels for the number of users based
>on reception in the Greater Los Angeles region. That is a subjective
>opinion based on the number of "heterodynes" heard on each of the
>forty channels

Have there been any "official polls" to "prove" one way or the other? If so, show the work.

(Where have I heard THAT before...???)

>>Would you hold up the Citizens Band Radio Service, as it exists today, as an
>>example of how the Amateur Radio Service should be conducted?

>No. Why would that even be a question, other than trolling?

YOU suggest that someone else's post is "trolling"...?!?!

HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA

>Would Miccolis hold up US amateur radio service as the "proper"
>way to conduct citizens band radio service communications?
>If so, why? Show the work.

Did "Miccolis" suggest it was? Does Anderson have any proof that it's NOT a proper way to conduct communications? Show the work.

>Would Miccolis hold up US amateur radio service as the "proper"
>way to conduct Public Safety Radio Services, Aviation Radio
>Services, or Private Land Mobile Radio Services? If so, why?
>Show the work.

Did "Miccolis" suggest it was? Does Anderson have nothing better to do with his "quality time" retirement than to drop his own trolling line in the RRAP waters? Can Lennie not form a question that falls into the "SO, Did you like having sex with your Mother?" category?

More Andersonianistic hatred and rhetoric. Not that we'd expect less.

That's you all right, the king of rational discussion, debate or argument. And the sun sets in the north and rises in the Sahara.

>
> There will not be any "welcome" to such an individual at
> my home or anywhere else based on this idiot's demands
> of physical confrontation.

translated....I prefer the cowards way out by hiding behind a keyboard and monitor. The only physical confrontation is in Leona's Mad Cow diseased brain. The fact to face was a a place of her choosing over coffee and Danish. And it wasn't a demand to meet you. You give yourself way too much credit..then again, you give yourself way too much credit for everything you do. I suggested a meeting, not demand.

I think the words coward in describing you conveys too much and would actually be offensive to the true cowards of the world. You more of a Word Warrior with pussy tendencies.

>
> There will be no "meeting" with an imaginary persona, an
> alias, a work of fiction, a will 'o the wisp no more

Gee, imagine that. Like a little yapping dog. All bark, nothing else. I guess the Vegas oddmakers were right. That's OK. Everyone understands

> If US amateur radio is based on such individual demands
> of "showing" anything through physical intimidation, implied
> or real, then it has passed beyond any reasonable "service"
> to any citizenry, licensed or unlicensed.

Ohhhhh..Leona...having a bad PMS day of what. I assume you refer to yourself when you mention the unlicensed?? Freudian slip is showing there girlie. Better tuck that in...what would the neighbors think

Seig Lennie Sieg Lennie Remember April 30th

Stay safe behind locked doors there Leona...keep living in the past. You're safest there.

I think we've proven the point well enough.

Game, set, match

But not enough to save the Morse cw pass/fail test, either
internationall, or here in the US. The trend is clearly the other
direction. Get on the bandwagon, or get run over by it. Morse is just
another mode of choice, as it should be. Making people "work" at it is
no longer operable.

Lennie, you arrogant twit, you have NO IDEA who you have ALREADY had "meetings" with!

HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA

>If US amateur radio is based on such individual demands
>of "showing" anything through physical intimidation, implied
>or real, then it has passed beyond any reasonable "service"
>to any citizenry, licensed or unlicensed.

And once again, Lennie the Creep is reminded that the going's on in this NG are NOT "Amateur Radio".

Furthermore, if not for his own snotty nosed, snide, and irreverent insults that he insists on spewing under the guise of his "First Amendment Rights", he would not engender such emotions.

You can only slap the hornet's nest so many times before you get stung.

You are SUCH a PUTZ!

In major harbors and waterways there are USCG Vessel Traffic System channels as well as Channel 13 - Bridge-to-Bridge (Guard) channel - that must be monitored and used as appropriate. Even though it's optional for small craft, it's a smart thing to do, lest the Oceanic Princess cut you in half when your back is turned....

It's common to see three or four VHF radios working on the bridge of compulsory-equipped vessels who must monitor 13, 16, VTS, and whatever working frequency they use.

Burdening the FCC with a lot of non-communications-radio
regulatory requirements and then started siphoning operating
funds away with "instructions" to "prioritize" -- which means
that anything that doesn't happen in Washington doesn't happen
period.

Right on the money. It still hurts.

>Since any monies FCC collects are put to the Federal Treasury and not
>allocated to the FCC, there is no incentive to enforce any problem
>areas unless political pressure is applied. Let the Fcc have a
>portion of the Fines they collect and enforcement would have some

>teeth.

Just look at the smelly mess in questionable drug asset
forfeitures and other "procedures" that local law enforcement
gets into when they are able to keep a portion of asset
forfeiture "proceeds" as if it was "income".

I would rather keep the Federal system honest and make The
Congress shoulder its responsibility to fund the FCC from
general revenue, not from "future" asset forfeitures.

Hanging on my wall is the famous "WOLF" poster that came out several years ago....97 instances of the word "WOLF" in black letters neatly arranged in a 5 X 20 array on the sheet with three instances of the word "HELP" in red letters interspersed.

97% of all EPIRB/ELT alerts are false alarms. I've done my share of df-ing and silencing them, too.

It is no longer necessary for you, as the driver of a vehicle, to know how to manually crank the engine or advance the spark.

If you were dying, would you turn down help from a ham who doesn't know Ohm's law but is a darned competent emergency operator?

IMO, the only valid reason for the continued existence of the ARS is to provide emergency communications. It is not necessary to know Ohm's law in order to provide emergency communications. It is, however, necessary to have enough emergency operators to provide emergency communications.

No aspect of life is without controverrsy or debate, Mike. The number two cause of war in the world is religious intolerance, yet if you ask anyone what is so IMPORTANT about religion, it is love and acceptance...Go figure. Amateur Radio is no different.

This NG is NOT Amateur Radio. It is (for the most part) a forum for discussing that which we really care about, and for some people, a means for discussing that which they are not otherwise able to do so.

TRUE Amateur Radio is ABOUT radios. That's NOT what this NG is about, protestations of some posters to the contrary. It is very much about pontificating, "puffery", postulating, procrastinating and pointless pandering. We are ALL guilty of it. Some are even GOOD at it!

And for SOME....for discussing things in a manner in which they would not discuss things on the air!

If you are not already licensed, TRY IT! I have been a Ham for almost 30 years now and it is an ongoing love affair and learning experience. There is always something new and exciting to do.

73 and good luck.

I'd accept help from a 'ham' who was the WORST emergency operator of all time, Cecil. Or just a civilian with a 'walkie talkie.' Your argument makes absolutely no sense in the context of ham radio. The issue is easing of requirements.

>IMO, the only valid reason for the continued existence of the
>ARS is to provide emergency communications. It is not necessary

>to know Ohm's law in order to provide emergency communications.

It's not necessary to know anything to provide good OR bad
emergency communications. Ham radio is not unique in providing
emergency communications. That's a major reason Amateur Radio is
basically toast today, as Vic Clark understood well.

Regards,
Vince, WB2EZG

Vincent Biancomano wrote:
> The issue is easing of requirements.

That's exactly what I'm discussing, Vince. Would you accept help from a ham who entered ham radio under eased requirements? Can a ham who knows Ohm's law save your life any better than a ham who doesn't know Ohm's law?

> It's not necessary to know anything to provide good OR bad
> emergency communications.

Well, that's obviously an overstatement but I'm glad that you agree with me that halitosis is better than no breath at all.

Times are changing, Vince, and progress happens. You either learn to live with that fact or get buried in the sands of time. Integrated circuits have made it unnecessary for a ham to know how integrated circuits work just as modern automobiles have made it unnecessary for you to know how to manually advance the spark.

Must have carrot, must have money, fund the agencies that produce money
and allow them to do their job.

PHIL,
The New Orleans FCC Office has 3 people (field) which covers the Gulf
Coast from LA-TEX Line to the Panhandle of FLA and the whole States
of Louisiana, Mississippi, LA (Lower Alabama)(LOCAL JOKE), Arkansas
with assistance from Dallas and the Panhandle of FLA as well as
the Port of New Orleans. I watched an Agent speak loviningly of when his
retirement time will come, 90% of the cases are Phone Co related,
5% Tower stuff and the rest is putting misc fires. They work the
interference cases and the bootleggers when they can.

We know that force is involved. So if there is no work, then distance
must be equal to zero.

And again, whether it's a ham or not, the issue is about ham
radio, not about who is supplying emergency communications. It's
called ham radio because an understanding of 'radio' is implied,
and indeed, ham radio is officially defined as such.

>Integrated circuits have made it unnecessary for a ham to know
>how integrated circuits work just as modern automobiles have
>made it unnecessary for you to know how to manually advance the

Integrated circuits contain oscillators and amplifiers, passive
components, and so on, and I expect hams to know what they are
and how they work if we're talking about 'ham radio.' No
matter what new device they're in. Until ham radio is officially
redefined, that is, not redefined in de-facto fashion.

Regards,

Vince, WB2EZG

>I got news for you. I'm in commercial radio.

You clean the floors at WKRP in Cincinnatti...??? Can't be anyone improtant, since there's NO name here. Just another anonymous coward trying to impress someone with thier "Hot Tip" newsgripe flash.

>We find people all the time using cheap marine radios for CB style
>communication, both local and long distance, even kids using it as a hobby,
>like CB, just to screw around with. THERE IS NO FEDERAL ENFORCEMENT.

Then they are falling down on the job there, but in the Chattanooga area last summer, 15 people were cited for the very same thing, all but three using marine radios for a taxi service.

There IS federal enforcement.

>They don't care

Yes they do.

Try some real facts and real situations. The rest is as ficticious as your "name".

Lennie, prove to me where those who are renewing are all "just" Technicians, or have passed the code test at a VE session and are carrying an CSCE as authorization.

You have an unknown variable that you cannot quantify short of complete polling of every current Technician Class Amateur. Are YOU going to expend those funds?

>Are there really more HF-privileged licensees on the air after
>restructuring took place on April 15, 2000? If so, how can you
>"prove" that? By insulting others again?

I don't have to insult anyone to remind everyone with a junior high school math education that where there is an undefined variable, you have an unknown result.

>Where is "the math flawed," nursie?

In Southern California, it seems.

Nitey night, Lennie. Have an extra swig on the Geritol on me tonight.

Phil,

I am certainly no stranger to the ELT/EPIRB searches. In the vein of this thread, it is alarming to me the rate at which bootleggers of all sorts seem to be operating with impunity anywhere they please. As an active CAP member, licensed to operate on CAP/USAF frequencies and a ham as well, I am disturbed. While we sit here and discuss the ramifications of various bands, no one seems to be attempting to do something about it. It would seem to me that we, as a group, should start the ball rolling by flooding our Congress with letters carefully explaining the problems that this can cause. We must make them aware that all is not well in River City. FCC MUST be adequately funded to go after those outlaws who operate on frequencies for which they are not licensed.

Some years ago (ah, for the old days of an FCC with TEETH!), there was a search in my area for a light plane that disappeared in a thunderstorm. We set up our communications, using VHF-FM repeaters for coordinating several search bases scattered about a 70 mile radius, and a 26 MHZ frequency for low power "incidental" comms. This was a reliever frequency used for flight line to ops, personnel to ground ops, and even sending out for sandwiches. It soon became evident that we were going to have trouble, for there was a high powered CB station a-jawin' away right on top of us. With the 5 watts we were using, it was impossible to use it for more than a few yards away! I was absolutely enraged at this intrusion. At that time we were governed by FCC rules rather than the NTIA as we are now, and we were prevented from asking the guy to move (can't talk directly to an illegal station). I doubt he would've anyway. I hunted for this fellow for a couple weeks after. One day, I happened to travel to a small town just a few miles from here to drop off a person who needed a ride home. I turned on my radio and was instantly greeted with a loud, booming signal that had my meter pinned hard over. Same voice! I had no DF equipment with me at the time, but I KNEW this guy was within a couple miles. I stopped at the local town police station and asked the dispatcher to come listen to see if he knew who that was. As soon as he did, he said, "Sure, that's XXXXX and he lives on Alabama Ave". I drove over there, and sure enough, there was a tower with a set of "moonraker" beams in the yard. I went home and returned with a tape recorder, sat in front of his house across the street for a bit getting enough "sound bytes" to bite him in the a$$. I sent the info off to the Wing Communications Officer. The following Monday, I'm told a couple of well dressed gentlemen and a US Marshall knocked on his door! He lost his equipment and his "exchequer" was considerable lighter!

That is the sort of response it will take to get these lawless morons to abide by the law. The laws are there to allow for the efficient use of the spectrum by all who have need. These people not only are are ignorant of the concept of Frequency management, but they only care about their own convenience.

It may be a dream, but I hold the hope that FCC will soon be fitted with a new set of TEETH!!

Well, that's an excellent answer. But it sounds a bit contrived - to fit a particular circumstance. And I seriously doubt that's the answer Vince would have given.

One would hope the FCC cares about the health of the ARS. But the idea seems a bit pollyannaish to be coming from a federal agengy. Do you have anything in the way of fact that might lend support to such a notion?

Sorry, Ed, I'm not convinced. If the vote is made public, nobody has to ask
their director, because they already know the answer. No director would ever
have to say "I voted against it, but I support the policy of the organization"
if the vote was public.
>
>Of those that voted against it, it is still unknown why they did so.

Voted against what? The proposal to eliminate support for S25.5, or the
proposal to have a rollcall vote?

>Did theyfeel it went too far, or not far enough? If I were on the Board
(Director
>Hare
>-- does that have a ring to it, or what?), I may have voted against the

I think there should have been more time allocated to getting the word out, and
more publicity about the agenda item.

I think one factor driving this change was the Region 3 IARU meeting. Another
was the final form of the R&O, and the comments of the FCC. Better to devote
one's resources to things like the 40 meter issue, where there's a chance of
winning.

You gonna collect on that lobster bet or what?

Wait til you try to download it from FCC.gov. You get 60 pages of which
pages 9&10 are the only thing you really need along with the fact that
Block 1 should be 'HA'. The 605 is the one-form (with suitable addenda)
does all approach. You get real familiar real quick with printer
instructions.

Absolutely. The issue is easing of requirements,
any which way you twist or turn it, including
through the 'regulations.' For FCC's R&O makes
that quite clear.

Regards,
Vince, WB2EZG

 A testing system that demands little or no learning for an examinee to
acheive
every level of licensing. Very efficient.

 Yes indeed, that's my story and I'm sticking to it.

 Ed if you could wake up yoiu would know from long ago that it is the
SYSTEM that I demean and not the products of it. I have made tha clear
many times.It isn't the fault of new Extra licensees that they were not
required to learn anything meaningful to attain that level of licensing.
But it is no less shameful.
 Of course you can easily overlook the resulting inferior product. Just
as long as he joins the League.

 Thtr FCC might just as well have dropped all pretense of graduated
licensing.

Right! Why go to all the trouble to actually learn all that mundane material when one can just memorize whatever is needed to regurgitate the required verbiage at test time? You've already said you went through your EE program doing that. Why should it matter at all for hams and Extra class exams?

 So what we eventually have, sooner rather than later the way it's
going, is a ham radio that exists in name only, and then only because
FCC hasn't gotten around to renaming it. The basic original entity will
have de facto ceased to exist.

Cecil:

Unfortunately, that particular sword cuts both ways. In fact, it was exactly the brutal ad hominem attacks of rabid NCTA's that embroiled me in this debate on Fidonet over a decade ago. Also unfortunately, I must admit that I have been responsible for my own fair share of such attacks -- but only after being quite righteously provoked. The difference is that I do have a conscience about such things; a lot of Usenet users do not. Such is the pity.

Just logic. It's logical that the FCC recognizes and wants to preserve the emergency communications function of the ARS. It's logical that the FCC recognizes the average age of the members of the ARS. The nocode tech license has contributed a large percentage of the present ARS membership. It's logical to continue that same trend of reduced requirements in order to attract enough amateur radio operators to provide the emergency communications function.

(Camel's nose story deleted for brevity.)

Hans:

Thanks, your story has proved my point. If we didn't want the "camel's
nose in the tent," why did the FCC get involved in reducing amateur radio
licensing standards? Obviously, because a lot of camels couldn't breathe! Or,
more
accurately, they weren't able to grab a microphone and start talking. But I
know the cure for that -- let 'em try to do my job for a couple of days!
They'll
get tired of talking into microphones right quick!

IMO, emergency communications is the only useful function performed
by the ARS so it cannot simply be ignored.

> Integrated circuits contain oscillators and amplifiers, passive
> components, and so on, and I expect hams to know what they are
> and how they work if we're talking about 'ham radio.'

Why, Vince? To what purpose? Automobile operators no longer need
to know how automobiles work. Not many hams will even attempt to
repair an IC-706.

I disagree with it in the sense that it is a false statement. The
ARS is not a fundamentally technical service and hasn't been for
a number of years. The ARS is fundamentally a communications service.

The new technology has obsoleted the old ways of doing things, Dick.
That's true in all areas of our lives and it is true in ham radio.
Why do you believe that amateur radio should somehow be exempt from
change, evolution, and progress when nothing else is?

>Cecil already knows this isn't a new technlogy vs. old issue.
>Doesn't keep him from doing his damnedest to make it so, though.

Well, Dick, one would have to agree his message is confusing...
even to Cecil, I suspect. On one hand, he's railing about old
technology versus new, and new hams being held back in learning
the new. On the other hand, he's stating that knowledge of
technology is no longer needed in ham radio, anyway: just
knowledge of rules, regulations, being a good op, and safety.

Regards,
Vince, WB2EZG

They are entrance exams, Dick, not graduation certificates. I learned almost everything I know about ham radio *AFTER* I got my Conditional license in 1952 which granted me *ALL* amateur radio operating privileges.

Hams can do exactly what I did after I graduated with a BSEE degree.
They can learn whatever they need to know as needed. A ham radio
exam is an ENTRANCE exam.

Almost nothing goes all the way down to zero, Dick. Do you think the
income tax reduction will eventually result in zero taxes? Dream on!

That's not all that ham radio is about, Vince. I learned almost everything I know about how things work *after* I obtained my Conditional license. I learned almost nothing from memorizing the answers to the questions on the General exam in 1952. IMO, ham radio is presently mostly about emergency communications.

Until Part 97.1, basis and purpose of ham radio, is changed officially, then ham radio is defined mainly as a technically based hobby. Parts b, c, and d, speak to that. The problem comes about as a result of forces trying to change ham radio to a non-technical hobby in de-facto style. That's the FCC's failing, who had their chance to clear the air and decided to pass it up by saying that "ham radio is a fundamentally technical hobby" and then falling apart in their R&O explanation.

Regards,
Vince, WB2EZG

  There is not a lot the Coast Guard can do about it anyway.  Other
than very specific situations (interference with navigation or
distress, compulsory vessels, etc), enforcement is handled by the FCC.
 Even if that were not the case, most Coast Guard facilities are just
as strapped for staff as the FCC.

Actually, in the grand scheme of things, that form does reduce the amount of paperwork - that one form does the job of six or seven other now discontinued forms. Of course, as you've realized, for the individual filling it out, it certainly didn't reduce the amount of paperwork. Of course, when it comes to the government, the individual doesn't really count that much.

  Amen to that, Jerry.  While the FCC is trying, and not doing too bad
of a job (except for the mess on 27-28 MHz), it could definitely use
more funding, and more staff, for enforcement.

A little less than half of those 400 false distress calls I mentioned. If I remember correctly, it was about 170 to 180 in 1999 (I had a paper with the exact numbers, but I couldn't find it while writing this). However, unlike the outright false voice distress calls, most of those are true accidents ranging from activation while handling to people testing them (not remembering they're actually transmitting a distress).

But, like you said, we have to treat every single one as a real distress until proven otherwise. Luckily, most accidental activations are fairly easy to spot - the transmission is coming from a boat launch (or other boat facility), a marine supply store (yes, it happens), and so forth. If those transmissions continue for some time, someone is usually sent out to locate the unit and get it turned off (it may cover up a real transmission).

No big loss. He was nothing but a face anyway.

"Although he was on the advisory board, Spielberg did not currently have an active, direct role with the Scouts, Levy said. Spielberg, who earned a Scout badge for photography in his youth, previously convinced the organization to adopt a badge for cinematography"

Interesting why he waited all this time since the Supreme Court decision to finally make his move. Obviously it was more a publicity move than true convictions. Interesting that all these nay sayers have been silent for the past 90 years. Seems the BSA has maintained these standards since their inception and only since it became politically correct did anyone express their righteous indignation.

I wonder of the NAACP should sue the KKK discrimination against its members being allowed to join the Klan. Or perhaps the B'nai B'rith should sue the Knights of Columbus for the right to become members.

All it does is increase the $$$ being donated directly to the BSA. Ross Perot, wacko that he might be, has donated over $50 million to BSA HQ to cover the shortfalls that the national councils may experience.

Way to go Ross.

>Unfortunately, that particular sword cuts both ways. In fact, it was exactly

>the brutal ad hominem attacks of rabid NCTA's that embroiled me in this
>debate on Fidonet over a decade ago.

I, too, disagreed very strongly with some of the insults and attacks that some of the NCTAs used. Unfortunately, those that are now using the same tactics appear to be aligned with the PCTA side. It is unfortunate that some of both opinions feel that such conduct is appropriate in any social situation. Even worse, at least one of them feels that his demeanor is helping to teach people right from wrong.

>Also unfortunately, I must admit that
>I have been responsible for my own fair share of such attacks -- but only

Who cares. If the guy does not want to support morality, then I'm glad he's gone. Thank God one organization is willing to take a stand against immorality and depravity. Won't you heterophobes ever get it? Now back to ham radio.

Hi Jim,

I guess it was a bit extreme, but what a stupid jerk....I guess my flight instructor imbued a bit more respect in me for that whirling meat cleaver called a "propeller" out there to ever let myself be that close to one save for being in the left seat.

This idiot wasn't bold...He was stupid. Now he's dead. Oh well.

There is nothing "ad hominem" about calling someone a "baldfaced liar" if they are indeed lying.

Some people can't "debate" without rapidly escalating the "debate" to a shouting match. They have little or nothing to "debate" with, and/or are unwilling to accept known and established facts when presented with them. Thier last resort is name calling and fighting.

Oh well.

It is symbolism over substance, Vince. The majority of ARS members are not technical. One had to be a mechanic to drive the early automobiles. One had to be technical to build and operate early amateur radios. The same thing happened to ham radios and automobiles - scientific progress happened - mass production happened - good designs by professionals happened. With a BSEE degree and 35 years of engineering experience, I could be called a technical person. But I could no more duplicate an IC-706MKIIG than I could flap my arms and fly.

The FCC stated in its Report and Order (FCC 99-142) for WT Docket #98-143 that:

(a) "the public interest will best be served by reducing the telegraphy examination requirement to the minimum requirement that we have found that meets the Radio Regulations" ;

(b) "an individual's ability to demonstrate increased Morse code proficiency is not necessarily indicative of that individual's ability to contribute to the advancement of the radio art" ;

(c) "such a license qualification rule [Morse code exam] is not in furtherance of the purpose of the amateur service and we do not believe that it continues to serve a regulatory purpose" ;

(d) "the amateur service is fundamentally a technical service, the emphasis on Morse code proficiency as a licensing requirement does not comport with the basis and purpose of the service" ;

(e) "reducing the emphasis on telegraphy proficiency as a licensing requirement will allow the amateur service to, as it has in the past, attract technically inclined persons, particularly the youth of our country, and encourage them to learn and to prepare themselves in the areas where the United States needs expertise" ; and

(f) "telegraphy proficiency is not a significant factor in determining an individual's ability to provide or be prepared to provide emergency communications" .

Any day of the year, Bill, inasmuch as antique cars isn't the
subject. Morse code is. Fiddling with words (and issues) isn't
your forte.

>>He's wrong. It's that simple. In this case, very wrong, since
>>Morse is still in wide use in this 'Service.' And this
>>'Service'is what we're speaking about.

>Ah, but even "wide use" doesn't justify any need for a

>opinion will likly be different.

You can fiddle with issues as you wish, but again, you're not
good at it.

Where did I write we didn't have to justify our existance?  What I wrote
is that our existance is justified in ways more fundamental and
important than simply emergency communications.

Do me a favor.  Don't put words in my mouth.  Thanks.

But if they want to make an example of anyone, they can and
will, as I know very well. I was the District Director of the San
Francisco Office in the mid-1990s and I too "spoke lovingly" of
my retirement after The Powers That Be turned a deaf ear to my
need to add six or seven more investigators to my staff of
three. It hasn't improved any. Blame The Congress.

Jim Hawkins of the NO Office was a good friend/colleague in
those days, and very accomplished at "putting out fires".

You certainly implied that all that was necessary was our mere existence.
So, exactly what must we *do* to justify our existence?

> or practiced.

You need to crack open a dictionary, Vince. Nowhere in my dictionaries is "outdated" synonymous with "obsolete". As a matter of fact, Webster's says "outdated" means "outmoded". That's exactly what CW has been - outmoded by other modes. That's why it has been completely dropped from most other radio services. It has been outmoded. The only reason to use CW anymore is for the same reason Bill drives old cars - for fun.

Horses are not obsolete - they have simply been outmoded by more modern interstate transportation.

Maybe we should have a special ham license for guys like Dick.
Anyone who digs an eight cubic yard hole and fills it back up
a total of twenty times gets an Extra class license.

I would be satisfied if the God-Squad merely proved the existence of a
God. Otherwise, I'm going to have to go with the scientific evidence that
Homo Sapien DNA is 99% virtually identical to chimpanzee DNA and 50%
virtually identical to banana DNA.

> Hi Larry,
>
> Have you got that written into a macro or something? You post it as if the FCC published it that way. The FCC never published a document in such a form. It appears to be your own creation, with the context of their comments having been deleted.

Would like me to post the entire Report and Order?

The text in the quotes is the FCC words. The License Restructuring Decision was not a hastly written document. It had all the T's crossed and the I's dotted.

> More to the point, do you think their intent is to "ease" requirements?

No, I think they intend to bring their regulations into conformity with law by deleting the code exam requirement with or without the amateur radio community support. We best accept their decision less we hear another shoe drop.

>He's better at issues than you are at definitions, Vince. For
>God's sake, crack open a dictionary every once in awhile.

Keep praying for a bail out, Cecil, although Bill can't save you, just as he can't save himself. Starting with his "bull" statement in '93/94, when informed "the issue" was easing of requirements, not Morse. He needed Clark's statement plus FCC's concurring R&O to shut him down. And he's gone from there. Of all those arriving on the newsgroup in hopes of rattling cages just for the hell of it, then ending up rattling his own, Bill does it the fastest.

Regards,
Vince, WB2EZG

Nothing. Some idiot start posting multiple newsgroups
and we forget to delete the other groups. Sorry.

The newsgroups software can stop this by only
returning one newsgroup to the readers.

Their was a secret trade with the FCC, we got the 13 & 20 wpm code
exam requirement deleted in exchange for keeping Dick, Vincent, and Larry R
out of the FCC hair by entertaining them on this newsgroup.

It was good trade.

Obviously I know exactly what it is, Larry. I read it when the FCC
published it.

So then in what way is a quote of some pieces of the R&O taken out of
context, an answer to my question to Vince?

What I wrote
is that our existance is justified in ways more fundamental and
important than simply emergency communications.

Carroll's critique is based on "technologies ***which are in use in
the ARS***."  That indicates a preservation of the status in which
Carroll is quo.  If Carroll knows it and has practiced it, it is allowed
but everything else he doesn't know about is (seemingly) prohibited.

Amateur radio (be definition "not for pecuniary interest") is taken
as having no involvement with professional (activites done for
pecuniary interest) radio.  Those definitions are seemingly the
rationales for claims of radio superiority over professionals by
some amateurs.

In what part of the EM spectrum has the FCC "sold amateur frequencies
to the highest bidder?"

Is this something new not covered in the FCC's Daily Digest? Or is it
some urban myth reborn out of a need to rationalize some paranoia?

The latest and recent-past EM spectrum auctions concerning new
radio services are on the FCC Wireless Telecommunications
Bureau home page. None of those are "selling amateur frequencies
to any highest bidder."

>It is a mistake to put all our eggs in the emergency communications basket.

Part 90, Title 47 CFR, has regulations for US Public Safety Radio Services. The California Auxilliary Communications Service (ACS) integrates amateur emergency communications into a statewide emergency plan. Integrates, makes amateurs on an equal footing with professionals. Omelettes taste better when mixed well.

Mistake. Error. Incorrect. "Lie."

The smiley indicates the expected response from those who hear evil Citizen Boogeymen everywhere thousands of miles from another's geographic location. Their receivers exceed the physical limitations of radio, electronics, and the ionosphere beyond rational beings' capabilities.

>>Why does Miccolis ask?
>
>Just wanted your opinion, Len.

I don't think so. Such a "question" submitted in public is a rather obvious troll. If all that was wanted was an opinion, such could have been asked in private mail.

>> This is not the proper newsgroup to discuss
>>citizens band radio.
>
>I'll take that as an unsolicited opinion.

It would be a mistake, an error, a faulty judgement to "take" it that way. The title of this newsgroup is Amateur Policy.

Citizen Boogeyman, er, excuse me, Citizens Band radio was created first in 1958 (UHF), then augmented in 1959 to add the 11 meter telecommand and communications classes. Some radio amateurs have complained bitterly about the "theft" of their beloved, wholly-owned, ordained by God spectrum space on HF...for 42 years.

This newsgroup is titled as being for AMATEUR RADIO policy. Citizens Band Radio Service is not classified by the FCC as amateur radio, has its own Part within Title 47 CFR (95).

>>>Would you hold up the Citizens Band Radio Service, as it exists today, as
>>>an example of how that Service should conduct itself?
>>
>>No. There are far too few channels for the number of users based
>>on reception in the Greater Los Angeles region. That is a subjective
>>opinion based on the number of "heterodynes" heard on each of the
>>forty channels.
>
>OK

Over a dozen years ago I came across some Electronic Industries Association (EIA) statistics indicating over 10 million CB radios had been sold to US customers. Those were the 11m voice units formerly called "Class D" in the 1959 regulations. In that same time period there were 40 channels allocated for CB voice. It is fairly obvious that, if all were on the air at the same time and spread evenly across the allocated spectrum, that would make it a quarter of a million users per channel.

The above is an exaggeration, of course. Not everyone is on the air at the same time nor are they spread evenly among 40 channels. Just the same, there is a crowding in a narrow EM spectral region that far exceeds what occurs in the most crowded amateur bands during DX contests. [some amateurs will object to that since they exaggerate ten to twenty to thirty ham stations vying for a rare DX attention as "thousands"]

Is there any wonder that a few CB enthusiasts go beyond allocations into freebanding? That's no excuse for illegal action on their part, but neither is it worthy of some Hue and Cry for Capital Punishment for the evildoers by some hams.

Radio amateurs should police their own bands first in order to justify a self-righteous "opinion" of their own "superiority" in all radio.

>>>Would you hold up the Citizens Band Radio Service, as it exists today, as
>>>an example of how the Amateur Radio Service should be conducted?
>>
>>No.
>
>OK

That's a very blatant TROLL question, an attempt to manufacture some "dispute" for the sake of fighting, for a catharsis of personal opinion-and-frustration by the self-righteous. Standards and practices of today's amateur radio, including procedure, jargon, and everything else, is no role model for other radio services. Such hasn't even been divinely ordained, yet is included in many amateur liturgical documents.

>> Why would that even be a question, other than trolling?   :-)
>
>Just wanted to know your opinion, Len. Thank you for sharing.

You are welcome. It would be prudent to remember an old saying about "asking for what you want...you may get it."

CB was created by the FCC 42 years ago. The 40 meter band allocation changes began at WARC-79, 22 years ago. That 40 m issue HAS NOT BEEN SETTLED IN 22 YEARS' TIME.

The ARRL does not represent CB radio (see subject thread header of "Can we sue the ARRL? Yes we can."). It represents US amateur radio (by their own claims). Both the ARRL and IARU keep talking about the 40 m issue, yet nothing but talk has been done yet to settle it. 22 years of such talk. It would seem prudent to concentrate on amateur radio matters such as that rather than yet-another-castigation of CB radio.

The 40 m issue does not concern me. Have a blast with it.

No "weaseling" done. Anyone showing up at my house demanding a "meeting" has to be prepared to accept the consequences. Judging from the language used by the Anonymous one, this would not be a pleasant meeting.

Anyone is free to travel to and through all the states of the USA. Tickets to LAX or PSP are not free, nor are rental car fees, gasoline, insurance, or bail (after arrest). But, the anonymous one has, by admission, "plenty of income" and can afford to squander it...not by talking of pleasantries about avocations, but by demanding "meetings" to "discuss differences."   :-)

Perhaps this is all in the "spirit of amateur radio?" A "communications service" where some take it to be a confrontational service wherein they seek to intimidate others? To subjugate them to their wishes? To use vile language in an angry tone because others are not frightened of their majestic powers and achievements?

Thanks for proving the point that, for some, amateur radio is not a recreational avocation, but a fume vent for your anger and personal frustrations.

Which is it? April 30th or May 23rd?

Do you need directions? From PSP terminal drive
south on El Cielo (past the government buildings)
to Ramon Road (bear left, watch for signs pointing to
I-70). Go east on Ramon Rd to Gene Autry Highway 111,
turn left there and keep watching signs (on your left)
after about two miles from the intersection.

There. Happy now? :-)

April 30th Leona, your official day of mourning the death of your Furher,
who took the Andersonian way (read coward) of kicking off this mortal
coil. I am sure the black arm bands will go well with your brown Hilter
youth outfit.

The 23rd is when I plan on flying in.

> Do you need directions?

Nope, I already have your address and phone number. I'll call you when I
get in.

> There. Happy now? :-)

Bank on it ;-)

Palm Springs Regional, Leona?? Kinda far, don;t ya think?

I-70 Leona?? somehow I don't trust your sense of direction there. Maybe I have a defective map, but according to the one I have, I-70 actually ends in Utah where it meets I-15. Now there is an I-15 that passes through the outskirts of Los Angeles. There's an I-10, but since you are the anal retentive of non mistakes, I can only assume you are trying to trick me you silly wabbit.

As to local airports, closer to you, I was thinking more along the lines of Santa Monica Municipal (SMO) or perhaps Compton/Woodley (CPM). They offer reasonable landing fees and don;t require advance notice.

But that's really not any concern of yours. Looking forward to coffee and danish, Lemon's OK..no prune or cheese

You mean you have to ask, after all their rantings right here on rrap? How about NCI and all their supporters, who have clearly shown their enmity toward CW and everyone associated with it? THEY avowed it, not us.

What you wrote was: "Where did I write we didn't have to justify our existance?" So do we or don't we have to justify our existence? Your choice of passive voice masks the necessary action, if action is indeed necessary.

I didn't think so either, given that I did not one trick of CW operating during my 5 year military stint. But....somehow NCI et al seem to see anything a CW supporter does as somehow alien and of enmity to the "people".

What is a 100% sure bet is that I didn't take that exam. But, given
the license manuals, there's no reason to think I wouldn't have
achieved a perfect score. After all, the 1957 ARRL License Manual
had 25 pages of Extra stuff to memorize. The Y2K ARRL Extra License
Manual had 359 pages.

Webster's Ninth New Collegiate Dictionary:
"outdated - outmoded"

Webster's New Universal Unabridged Dictionary:
"outdated - outmoded"

Neither dictionary even mentions "obsolete" under "outdated".
Sorry, Vince, you lose. Many things are outdated which are
not obsolete. Please stop trying to put words into my mouth
that I didn't say. It's tantamount to lying and an indication
of desperation on your part.

Those old obsolete dictionaries? Try Webster's New Universal
Unabridged Dictionary to alleviate your ignorance.

Assuming that such people exist, do they not have the right to hate whatever and whomever they choose? Are you a member of the feeling police, Dick? Do you dispense capital punishment for wrong thinking or just torture people into submission a la "1984"?

I personally don't know anyone who hates Morse code. However, I know some people who hate the Morse code affirmative action program administered by the feds because of S25.5. What is wrong with freedom of choice of modes in a hobby in a free country?

Someday you are going to have to learn to read, Dick. The NCI web page
says they don't have enmity toward CW or anyone associated with it.
What they object to is the federal affirmative action program for Morse
code testing. It ceased to be necessary decades ago and is simply an
outdated artifact left over from earlier days that needs to be discontinued.
You continue to be confused about CW VS Morse code testing. Nobody hates
CW. Lots of people hate the Morse code testing requirement, maybe even
the majority of hams.

Actually, that's not quite true, according to what I read.

Spielberg did not quit.

He just did not renew. Or actually indicated he would not renew.

And he did not say it was because of the BSA stand on gays. What he DID say was that he felt that his renewing and remaining a member of the board he was on was construed by some people as his taking sides in the issue with the BSA.

So... He did NOT quit. He did NOT say the BSA was wrong or right. He's staying out of it.

Mike

You continue to be confused, Dick. NCI doesn't object to CW or CW supporters.
NCI objects to the federal Morse code *testing* affirmative action program.
What is it about "Morse code testing" that is so hard for you to comprehend?

Change 'camel' to 'radio outlaws', also known as freebanders, and the
tent to 'ham radio' and you have the situation we face, albeit on a
smaller scale - for now.

If that is true there should be no advanced levels of licensing.
Entrance exams are entrance exams, such as Novice and General. Advanced
and Extra are not, despite your (and some of ARRL staff) insisting it is
so. Never was, never will be, except that the tests of today have so

```
diluted the mix that FCC might as well just go ahead and issue one
license to all. It is more smoke screening and falsfication.

>The FCC stated in its Report and Order (FCC 99-142) for WT
>Docket #98-143 that:

>(a) "the public interest will best be served by reducing the
>telegraphy examination requirement to the minimum requirement
>that we have found that meets the Radio Regulations" ;

>(b) "an individual's ability to demonstrate increased Morse code
>proficiency is not necessarily indicative of that individual's
>ability to contribute to the advancement of the radio art" ;

The above demonstrates ONE example of how FCC got into the
trouble it did with its R&O. That is,

An individual's ability to demonstrate ANYTHING, including being
a professional engineer, is not necessarily indicative of that
individual's ability to contribute to the advancement of the
radio art.

Regards,
Vince, WB2EZG

What you don't seem to realize is that the advance in technology is the cause of that "terrible skid of some of the people". It's not terrible at all and is the predictable result of those very advances in technology. It has happened in many other fields. You are living in a delusional world if you think you can keep it from happening in ham radio. You long for a return to the good old days but those days are gone forever.

You don't have to be a mechanic to drive a car. You don't have to be an electronics whiz to use a ham radio. Professional auto designers design cars so you don't have to. Professional radio designers design ham radios so you don't have to. You are no more capable of arresting the evolution of the ARS than you are capable of arresting the evolution of the automobile.

We are talking about "acquisition of technical knowledge", not
about digging a ditch. Acquisition of technical knowledge is
fun for me and is essentially effortless.

Earth to Dick: Professional designers of electronics have made it
unnecessary for the participants to need to have much knowledge of
the communications technologies. Technology has out-distanced the
abilities of the vast majority of hams. Amateur radio operation is
mostly plug and play now just like a host of other fields.

What a silly thing to say, Dick. The Advanced exam was the entry level
exam into the Advanced class. The Extra exam is the entry level exam
into the Extra class. What is it about ENTERING the Extra class by
passing the Extra exam that you don't understand?

Maybe I can offer a little insight here, Ed. While you and Cecil and
othres posting here spent much of your youth hanging out in the hippie
culture, presumabely looking for new and creative ways to avoid reality,
Larry and I were in the military getting a full dose of reality on an
ongoing, daily basis.
We learned that you don't neutralize an avowed enemy by pandering to
his every whim.
Do I believe that ham radio has enemies which do not wish us well? A
good number of whom are present amongst us? Does a bear live in the
woods?

So then I should just go ahead and accept that no longer shall, ever,
an extra class test amount to anything, but everyone who passes it
shall. Typical reductionist attitude.

>
> >I have made tha clear

No, Ed, the frosting on the ecake is that many do actually attempt to
learn the material on the tests, imn spite of the fact that it is not
really necessary under the present system.

"Today" isn't the problem, but it is coming closer and closer to that
day.

 For one thing, tune across 10 meters without hearing many CBers haveing
set up shop.

 Another, argue with you about it all here on RRAP.

Hi Larry,

Have you got that written into a macro or something? You post it as if the

FCC published it that way. The FCC never published a document in such a
form. It appears to be your own creation, with the context of their
comments having been deleted.

More to the point, do you think their intent is to "ease" requirements?

73, Jim AC6XG

Holy RF, Batman, the avowed enemies are after us again! Time to get
into our Radio Militia uniforms and spread around some doses of Radio
Reality�. Somebody call Steve real quick too, and make sure he is
"preapred", and Larry ain't trying to kiss that camel again.

There's a much more fundamental reason for the ARS to exist. The amateur spectrum is like a National Park. Citizens have a reasonable expectation to be able to make use of the radio spectrum without a dependence on commercial radio service providers. Selling amateur frequencies to the highest bidder is no different than turning Yellowstone Park over for private, commercial development.

It is a mistake to put all our eggs in the emergency communications basket.

UPDATE!!!

USA: KSMR Disappears
By Hans Johnson, Cumbre DX, and Nick Grace C., Clandestine Radio Watch
Clandestine Radio Watch 65 Extra, March 24, 2001

[Mar 24] After weeks of broadcasting, KSMR - Kentucky State Militia (KSM) Radio - disappeared on March 21st.

Although the reason for the disappearance cannot be confirmed, CDX- CRW received a report that the KSM ordered an immediate end to the station`s transmissions earlier this week. The KSM, however, did not respond to a inquiry asking them to confirm or deny this report.

CDX-CRW have also learned that the operator of KSMR, 'Major' Steve Anderson, may possibly return to the air with a new station. This operation may be a militia-supported station, but may have a different callsign and fewer, if any, ties to the KSM.

Exactly!

I *did* get close to props, but that was for taildraggers that had to
be hand propped. LOL!

```

Once more we get into the great debate among gays, the Boy Scouts, and the literal-minded God Squad. I am blessed sick of it. For the record, I am a straight male, ex-Boy Scout with my own problems with the BSA on an entirely different issue, and have enough Christian background to know that in Pauline Greek 'religion' and 'superstition' are the same word.

I invite readers to perform an experiment. Put a hand flat on the table in front of you. If you are male, you will note that your ring finger is longer than your index finger. This is not the case generally with women. You will further note that your dominant hand has a ring finger slightly longer than the non-dominant one. This is one of the trivial effects of exposure to testosterone in the womb. Every fetus produces it in the adrenals if not the testes. It does not come from the mother.

As it happens, design-center in the human and most of the animal kingdom in fact is female. When the International Olympic Committee, suspicious of the East German ladies, asked for a test to determine whether they were in fact women, the manufacturers of such tests told them that they could determine maleness and certify that they were not men but could not determine femaleness.

Producing a male requires a lot of work and it is not a foolproof process. It is generally accepted that female homosexuality is the result of excess testosterone; it is a prime suspect in autism; it is a good suspect in a number of other conditions. It is no huge secret that left-handedness goes strongly with males and we all know that being left-handed is a bit more than being right-handed mirror-image in terms of brain wiring and such. The male proclivity for inhabiting prisons and mental institutions is also no military secret. Face it, gang, to some extent being male is a birth defect.

While I know of no direct research that confirms the relationship, it is a pretty fair bet that a malfunction in the hormone bath process that determines maleness and redesigns perfectly good female brains and plumbing is part of the production of male homosexuals. To at least a very large extent, they are born not made.

So to speak in moralistic terms is flatulence, at least about the condition itself. It is not in the least unfair to point out that the gay community is a sink for every venereal disease known to man. But to simply gay-bash is like criticizing coyotes for eating sheep.

It is perhaps incumbent on the mainstream to learn enough not to equate homosexuality with pedophilia; given the number learning ASL for the deaf, however, this may be asking too much. The gay 'lifestyle' is not an equal alternative to the mainstream but there is no good reason for it to be stigmatized. The diabetic did not ask for it either but generally maintains a balanced life.

But the insulin-dependent diabetic generally does not shoot insulin publicly, the left-hander finds himself a spot on the left side of a table at a banquet, and gays might be well advised to follow the example.

If there is a majority group, it is those of us who would wish the God Squad to learn something of faith and respect for the works of God, wish the gays to get the hell out of our face, and wish the Boy Scouts to develop the good sense God gave the average billy goat. The cacophony of idiots gets old after a while.

Are you saying that the ARS is an attempt to put aside some spectrum as a national playground for the common folk? Therefore, we don't have to justify our existence? I'll have to cogitate on that one.

>fundamentally technical service.

The problem you have Dick is that you view being
technical in a very narrow manner.  There are thousands
of engineers that never touch a piece of test equipment,
or even equpment itself and yet they are actively
involved in technically planning telecommunications
networks, broadcast and military communications
systems, and a whole host of other areas.

Cheers,
Bill K2UNK

The argument Vince, is exactly as Cecil states:
"As an entrance requirement, it is
simply outdated and therefore is in the act of being dropped."

Now Vince and others may disagree with that assessment,
but that doesn't change reality. I have several antique autos, each
is obsolete in terms of contemporary motor vehicles.
The fact that I occasionally USE those vehicles does
not make any of them NOT obsolete.

Cheers,
Bill K2UNK

Well said Cecil. The point also missed is in all those
other areas that are electronic related (e.g. consumer
electronics, TV, VCRs, DVDs, etc.) the old "support
mechanisms" like repair shops which were also somewhat
of a training ground for the electrical equivalent of the
backyard mechanic are gone because the cost of
these products is so low that when one fails after
10/15 or more years, the replacement cost for a new unit
is cheaper than the lowest possible cost of repair...AND
the new product replacement usually is better and has
more functionality.

>You don't have to be a mechanic to drive a car. You don't have
>to be an electronics whiz to use a ham radio. Professional auto
>designers design cars so you don't have to. Professional radio
>designers design ham radios so you don't have to. You are

>are capable of arresting the evolution of the automobile.

Indeed, the ability to create any ham equipment with the
functionality of even a modern HT is far beyond the
practical ability of most any one individual...even if that
person had the technical competency to design it.

Cheers,
Bill K2UNK

You conveniently didn't answer my question.
Your posts seem to be (IMHO) much more tied up with
some affinity for WORK as a discrete effort that
should be reuired to obtain a ham license. The
reality is that the FCC does not now and never has
ever been concerned with work as an element of
licensing.

>part of the NCTA.

Larry, that is just so much bull. The reality is that we all
make various choices regarding our time and how
we spend it. The choice to learn or not learn any
particular skill has nothing to do with maturity at all.
The issue we NoCodeTestAdvocates raise is that
there is simply no longer any valid reason to retain code
skill as a requirement. You may disagree with that,
but in the end, that decision will be made by a
cross-section of the worlds radio regulation policy makers.

Feel free to comment to those policy makers that
you beieve the end of code testing is just a sign
of their imaturity in making the decision to do so.

> Unfortunately, new hams coming into the service after
>Restructuring have no option but to be painted with the brush created by
>the lazy majority who whined for, and received, lowered licensing standards.

Your commentary sez volumes about your attitude.

Cheers,
Bill K2UNK

Perfect example of abusive and mean-spirited commentary,
Thank you for sharing your opinions with us as an
example of how not to behave.

>I just found out the league is going to push to remove all code requirements
>at the next international meeting. It's just the next step in their continuing
>efforts to dumb things down.

Your understanding of the league position is flawed.
The vote the league directors took was simply to
not oppose the removal of code as a requirement.
It is only the spin that you and others now state that
is recasting the league position to be one of pushing, rather
than simply not opposing.

>Soon, the only difference between a ham and a CB'er will be a piece of paper.
>Our bands sound more like 11 meters everyday.

Your opinion only. You are entitled to your opinion,
but stating it des not make it fact.

The reality is it won't do you much good to mess with words,
Bill; you're not good at it. Obsolete means no longer in use
or practiced. Cecil has stated Morse is outdated, i.e., obsolete.
He's wrong. It's that simple. In this case, very wrong, since
Morse is still in wide use in this 'Service.' And this 'Service'
is what we're speaking about.

Regards,
Vince, WB2EZG

The question is: What can you NOT do today that you could
10 years ago? The implication is that something about ARS
has changed because of lowering test requirements.

> For one thing, tune across 10 meters without hearing many CBers haveing
>set up shop.

What does that have to do with the requirements to
become a ham today vs 10 or more years ago?

> Another, argue with you about it all here on RRAP.

Is that a good thing or a bad thing?

I'll defer to the court of public opinion as to the appropriate
use of the descrition obsolete to describe my antique cars.

>He's wrong. It's that simple. In this case, very wrong, since

Ah, but even "wide use" doesn't justify any need for a
skill test for the mode (IMHO). Your mileage and
opinion will likly be different.

NO: That is CONSISTENT with the paperwork reduction act. The FCC got rid of an entire form in favor of another that already existed.

It doesn't matter that the replacement form is longer. That's not what "reduction" means to the U.S. Government. ;-)

>>Just wanted your opinion, Len.

>I don't think so. Such a "question" submitted in public is a
>rather obvious troll. If all that was wanted was an opinion,
>such could have been asked in private mail.

For someone who has repeatedly refused to exchange such "questions" in private e mail rather than a public forum, this is quite strange. Not unexpected, in as much as Lennie the Licenseless has demonstrated that he does indeed have more than one face, taking frequent opportunities to show most of them.

>It would be a mistake, an error, a faulty judgement to "take"
>it that way. The title of this newsgroup is Amateur Policy.

A fact that you only adhere to when it suits you.

>Some radio amateurs have complained bitterly
>about the "theft" of their beloved, wholly-owned, ordained
>by God spectrum space on HF...for 42 years.

Display of virulent anti-Amateur Radio attitude noted. Again.

>This newsgroup is titled as being for AMATEUR RADIO
>policy. Citizens Band Radio Service is not classified by
>the FCC as amateur radio, has its own Part within Title
>47 CFR (95).

And again pointed out that this is a fact that you adhere to only when it suits your particular rant. Changes in other radio services frequently DO impact Amatuer Radio and must and should be discussed by those who are TRULY interested in Amatuer POLICY matters, not just personal agendas intended to salve "professional" egos.

>Radio amateurs should police their own bands first in order
>to justify a self-righteous "opinion" of their own "superiority"
>in all radio.

According to The Chief Enforcer of the Radio Realm (read that "Riley"), we are already doing a grand job, although there is always room to improve.

Unfortunately, the encroachment on 10 meters and seemingly other bands now (notably 40 and 12 meters) demands that we pay attention to what is going on outside our allocations.

>>>>Would you hold up the Citizens Band Radio Service, as it exists today, as
>>>>an example of how the Amateur Radio Service should be conducted?

>>>No.

>>OK

>That's a very blatant TROLL question, an attempt to manufacture
>some "dispute" for the sake of fighting, for a catharsis of personal
>opinion-and-frustration by the self-righteous.

No it wasn't. You frequently assail us with your lengthy CV of "professional" communications experience. It was a simple question. I asked you the same question and you ignored that too.

>Standards and
>practices of today's amateur radio, including procedure, jargon,
>and everything else, is no role model for other radio services.

Who said it was? Who, Lennie? Post quotes, please.

>Such hasn't even been divinely ordained, yet is included in many
>amateur liturgical documents.

WHAT Amateur Radio related "documents" have made any such claim?

WHICH documents say "Amateur Radio" techniques are THE techniques that should be applied to ANY OTHER radio service, Lennie?

You are, of course, again lying. I expect no answer and I doubt that you will disappoint me.

Thanks.

>You are welcome. It would be prudent to remember an old
>saying about "asking for what you want...you may get it."

We would prefer a professional, informed opinion. Not one based upon your anit-Ham rhetoric.

>The 40 meter band
>allocation changes began at WARC-79, 22 years ago. That
>40 m issue HAS NOT BEEN SETTLED IN 22 YEARS' TIME.

Unfortunately the "40m issue" is one that involves over 150 other soverign entities with their own agendas, and ITU matters are only dealt with in 3-5 year increments.

> Both the ARRL and
>IARU keep talking about the 40 m issue, yet nothing but talk
>has been done yet to settle it.

Not true, but it makes you feel good saying it.

>22 years of such talk. It would
>seem prudent to concentrate on amateur radio matters such as
>that rather than yet-another-castigation of CB radio.

Yeah...keeping unlicensed freeloaders off of Amateur allocations is highly over rated.

Right.....

>The 40 m issue does not concern me.

Then why the snotty slap at the on-going efforts to realign the band?

None of your claims was true, but you felt it necessary to abuse us with them.

>Have a blast with it

Those of us with a license will. You can sit there and watch us play.
Enjoy.

>of Santa Monica Municipal (SMO) or perhaps Compton/Woodley (CPM).

WHOA! I wuddn't "do" CPM if I hadn't been there before, Jonathan. It's in a developed area and the runway has concrete walls at either end...literally.

I watched a fellow try to make a full-stop landing there despite being high when over the numbers. He should have gone around, but you could tell he was determined to put it down, "no matter what". He did get it down and brought to a full stop before he got to the wall, but there was not enough room from the spinner to the wall to squeeze between.

He got out, handed the keys to the FBO operator and walked away.

If you're not flaring when you are over the REIL lights, go around.

That's not the one I was complaining about. Last Sunday, I tried to
buy a beer at 11:55am. They wouldn't sell it to me until 12:00, five
minutes later.

> Until a little over a century ago, radio had not been discovered. Does

Radio waves are natural occurrences and ignorance is not proof of non-existence. Please provide some objective evidence that a supernatural realm exists.

Yup, just like radar and steam engines and hydroelectric power and automatic transmissions didn't exist either. I can't just see it now..... a million years ago, them cavemen sitting in their caves watching TV by candlelight saying "they ain't never gonna invent radio".

Thanks for the heads up. This will be my first trip to the left coast in a private, so any tips like this are certainly appreciated.

Got an e-mail from a friend about a website for all the SoCal airports and they even have pictures.

http://www.airsports.com/airports/

Am I wrong, is CPM a dirt/grass runway? Maybe it's a bad picture (aerial view) but you can see those walls you were referring to, and what's this No Tower!!!??? I hate those. They have several in New Jersey...another name for them is Bump and runs. Two planes landing bumping into each other and then everyone runs to avoid the falling flaming debris

What do you know about VNY or BUR. Both actually seem closer to Leona that CMP or SMO.   Looks like Burbank is a better option although it seems to have more traffic considerations due to the proximity to LAX, Van Nuys and Whiteman.

Still plenty o'time to decide. Poor little Leona, suggested coffee and Danish at a place of his choosing and he turns it into confrontation. Too bad. I would have even bought. Heck, he could have invited his wife. Vegas odds on LennieNoShow 29:1

Thanks again.

Subject: CB Channels Now Expanded...???
Message-ID: <20010419102808.25013.00000236@ng-mq1.aol.com>
Xref: supernews.google.com rec.radio.amateur.policy:19737

Lennie the Lame has made a point (as have several others) that the shennanigans of some CB radio operators are not "any of Amatuer Radio's business".

I refer the unbelieveing and the contrary to "www.coaxkid.com/chart.htm". There you will find a "Channel Chart" of "CB Channels" for export rig users and those who have "exapnded" their domestic rigs.

You will note that the chart starts at 25.165 mHz, a full 1.8 mHz below the legal CB band.

The chart then goes up to 29.655 mHz, covering all except 5kHz of the Amatuer 10 meter band.

This is not an isolated occurence, nor is it the fantasies of one errant CB/Freebander. Anyone who takes the time to just coast up and down the band will find that this is a VERY prevelant problem, and that indeed these "channels" are in use by other than the intended services and licensees.

This is not ""Chicken Little" nor is it any misplaced paranoia. It's happening, and it IS our problem. If WE do not take steps, within the framework of FCC regulations and other civil law, to stop this, it is OUR fault.

We cannot allow it to go any further.

"An America Not Prepared For War In Peacetime Will Not Know Peace In Any Time."

Screw China. Feed 'em fish heads.

You remind me of a statement made by my favorite schoolteacher from the eighth grade, mid fifties. He once said to the class, when discussing futuristic things, that it seemed likely that someday humans would evolve to where a human was just a big blob with a single thumb, with which to push buttons.
He was being facetious. But evidently that's your view of the future. In your view all anyone needs to know is how to consume.

 Sufficient for the purpsoe of teaching basic learning necessary for
acheiving an anateur radio license? What part of "sufficient" don't you
understand?

Only a character like you could make such a comparison. Of course the
source of the belief is the critical element. There is no doubt about
the source of Larry's belief (and mine) in the efficiey of
radiotelegraphy. It has 100 years of factfilled history to stand for it.

 No, it means that yoiu are still full of crap.

 It
> is not a graduation certificate.

 That's curious. If it is so, why didn't you 'enter' long ago? It was
always a certificate of accomplishment, one that said you have reached
the highest level of amateur radio, not some beginners level. It didn't
test to see if you were learned enough to begin to learn to be an Extra.
You're so full of crap your eyes have turened brown.

Dick Carroll wrote:
> In your view all anyone needs to know is how to consume.

Exactly how many vacuum tubes have you built by hand, Dick? How many capacitors have you ever rolled out of foil and paper? How many pencil leads have you converted to resistors? How many grains of silicon have you ever found at the beach that would amplify a signal? The only difference between the time you got your ham license and now is the level of integration. Your black boxes were tubes. Today's black boxes are transceivers. The basic concept has not changed. Are you really that blind to reality?

Actually it's pretty clear, Larry. He was never able to meet the code requirements for Extra until they were virtually eliminated, so he is compelled to 'prove' that they were never proper in the first place.

I never needed an Extra license, Dick. But my good friend was barred
from the HF ham bands for 25 years. Now he is an Extra. Exactly what
was gained by barring from HF ham operation an engineer with a commercial
radio license and 25 years of experience as an AM broadcast station chief
engineer?

Yep, there's no doubt that it is part of your religious cult beliefs. But you are free to have whatever religion you choose, Dick. The topic is not the "efficiey (sic) of radiotelegraphy". The topic is the Morse code *TESTING* requirement. I agree with the FCC on that topic.

Dick Carroll wrote:
> That's curious. If it is so, why didn't you 'enter' long ago?

Because it is not a certificate of accomplishment. It is a certificate for privileges and I never needed the extra privileges. The only reason I'm an Extra now is that I didn't want to be bumped back to General if the FCC decided to eliminate the Advanced class.

> It was
> always a certificate of accomplishment, one that said you have reached

If you really want to prove your assertion, Dick, memorize the definition
of 1000 words of Russian and get back to us on how easy it was and how
long it took you.

For a start how about convincing Hams, who feel if the "freebanders" are not on 10m it not a problem, to change their minds! I feel too many Hams ignore the larger picture because it does not impact them directly, yet. Worst still is why would anyone work to get any kind of Ham license to work H.F. when one could get a cheap export rig, amplifier, and work DX without one. Could that be one factor to explain the slow, or no growth in the number of new licenses? To allow the situation to continue would amount to creating a second "hobby radio service" competing with the amateur service, but with out any license requirements, and regulation.

Once the "freebanders" feel safe, operating anywhere on the 11/10m band, how long do you think it will be before they move in mass to other bands to try their luck there? Not only are "export rigs" a problem. but many of the "freebanders" now use modified newer all-band Ham H.F. rigs too. All they need to do is hang up a dipole for the band of their choice, and spin the VFO knob, then we have a problem.

Yes, in that they are actually communications-capable. And relevant to communications needs in times of distress or disaster. It is curious that many posting her in opposition of code testing would rather not have any communications capability rather than to acknowledge that radiotelegraphy, in fully successful use for over a century, be kept available within the ARS.

>

The history I read says that it was all amateur radio initially, even Marconi himself always claimed to be an amateur.

> Had Amateur Radio not had such relevance after WWI and WWII, it would not have

> been brought back to life.

Oh, it's relevant, all right. It has filled in more than adequately on many occasions. And shall in the future.

>
> If Amateur Radio sets itself apart from the rest of radio techology, we are
> making a big mistake.

Uh, Ed, I think our Gov't already set Amateur Radio apart from other services long ago, around the time of "Two Hundred Meters and Down". As far as "from other technologies", I have seen nothing whatever from *ANY* CW supporter which even remotely can be construed to mean any such thing. Keeping a CW test for amateur lciensingf is in no way "orienting the ARS away from modern technology" but instead keeping a more full complement of communications assets available for future use. It would be of great assistance if the ARRL, instead of wimping all the time, would actually spend jsut a little effort in educating new hams of the value of them learning CW so that they might at least understand what it is about, instead of just pandering to their lack of knowledge, and cowing before NCI and its lackeys. Magfazine articles such as "The How and Why of CW" by Bob Shrader W6BNB in the February 2000 issue of CW magazine help, but it looks like ARRL could have something on its website on the subject. Not all newcomers read magazines.

For you to suggest that our belief that radiotelegraphy, the most basic radiocommunications mode, should be kept alive and viable for future use within the ARS is denying other newer technologies- that is more than being simply disingeneous, it's downright abusive.

I challenge you - how many DSP based communications terminals do you have in your station? How many does W6RCA have? It will surprise me greatly if the two of you combined own more of them then I do. I even gave one to my son in law to get him started in digital comm.

Dick Carroll said:

> The history I read says that it was all amateur radio initially, even Marconi himself always claimed to be an amateur.

Marconi was businessman and a promoter. Contrary to popular myth, he never invented a thing, but took available technology and showcased it to promote his business. Today we would call him a "system integrator".

His "support" for amateur radio was a shrewd ploy to ensure a large supply of QRM for the Navy, so that they would buy his more selective receivers.

I don't really think so although it's certainly a possibility. I think there is a misconception that Ham Radio is all about 100' towers, walls-full of equipment, and a degree in engineering to acquire an Amatuer license. THAT'S the myths we need to dispell. Getting the word out about the now adolescent aged no-code license will help too.

I have heard many CBers state they don't get into Amateur Radio because of the cost, yet they already have the same amount of money invested in CB that could get them a good station for Amateur service.

>To allow the situation to continue would amount to creating a
>second "hobby radio service" competing with the amateur service, but with
>out any license requirements, and regulation.

It's already been "created". When the FCC washed thier hands of Class D CB they in effect said that's what they were doing. Maybe not officially, but that's exactly what happened.

>Once the "freebanders" feel safe, operating anywhere on the 11/10m band, how
>long do you think it will be before they move in mass to other bands to try
>their luck there?

BAM! Another one on the head. And it's already happening. Tune 28.000 to 28.135 and listen. They are higher, but not as many.

> All they
>need to do is hang up a dipole for the band of their choice, and spin the
>VFO knob, then we have a problem.

BAM! The nail sinks all the way in, even if a bit late. They are already doing THAT too. Listen to 6600kHz, 6955kHz, 6985kHz, and others.

I don't think we need to see much more to see that part of the perpetuation of "flaming" comes from cowardly sideline sitters who have nothing themselves constructive to add.

Not that I expected anything else from Hansel the Heartless. The very same form and fit of Lennie the Licenseless, and just as ineffective:

>In a sudden fit of patriotism, Major Steve Robeson LPN of the Radio Militia™
>donned his camo-fatigues with "KB1CCE" embroidered on the ass, and blurted
>out a bunch of old news, and concluded with:

Of course since it's been discussed before, per Hansel's logic, we should not discuss it any further.

(yeah....right)

And of course Hansel, like Lennie, despite an alleged lengthy professioanl career, can't seem to express his points without profanity or gratuitous insulting examples examples.

>Who is "we" and what is it that "we" plans to do, Nursie, other than scribe
>plaintive jeremiads here on rrap?

Nothing that involves you, Hans. Obviously you are "part of the problem" from the old addage that states "If You Are Not A Part Of The Solution, You Are Part Of The Problem".

Seems to fit. Perhaps a really good reason why the Hams of MN didn't lose any tears over your lackluster term in office as SM of Minnesota?

"An America Not Prepared For War In Peacetime Will Not Know Peace In Any Time."

Screw China. Feed 'em fish heads.

Hope he can use a backhoe. That's 240 tons of dirt.

Leland and all,

This is a serious problem. Yes, we must get in touch with our Representatives and begin making them aware of the problem and the further consequences if it is not nipped in the bud (so what if Barney Fife said it) NOW! As mentioned, the pirates are edging closer to the international HF aviation bands. That is the ONLY weapon we have. If we make our voices heard loud and clear, when various Reps begin hearing the same complaints loud enough and long enough, they will act. This is what happened with the "local enforcement" law got passed. However, this approach has not achieved any noticable results. The emphasis should've been placed on re-arming FCC with the funds and personnel to do the job in order to address the broader problem. Again, if SOMEBODY doesn't get off their (read that OUR) collective butts and use what tools we have to combat this problem, it IS going to get worse and worse. Maybe Congress won't care if CBers overrun the Ham bands, but if they can be made to see the dangers of allowing them to continue to operate illegally there and the extent of their encroachment onto public service and safety HF bands, they WILL do something.

Nobody wants to make radiotelegraphy unavailable within the ARS. Some
of us simply want radiotelegraphy to stand on its own merits and not
be artificially propped up by a governmental affirmative action program.

No machines allowed. Dick really, really admires work - the
harder the better. He would probably even consider a pick
and shovel to be an unfair advantage.

Len, DAMN IT!

It takes two to tangle, and your argument with "funguy" et al, has nothing to DO with ham radio at all. This is a NEWSGROUP, for gosh sakes! It's like saying John is Mad, John is also a Democrat, so, therefore, ALL Democrats are MAD! Even if the subject being argued is ham radio, it is an INDIVIDUAL argument between 2 or three people. The extraneous responses you get from some others is the result of their being denigrated by association--just like mine now. Why can't you AND funguy just let it GO!!?

Jerry

Words are cheap, Dick. Exactly what are you doing about it? Please
be action specific. Your rantings and ravings don't seem to have
had a very large effect so far.

The FCC has the responsibility for enforcement. Does it do any good
to report lawbreakers to the FCC? Is the FCC more likely to respond
to a lawbreaker within a ham band than a lawbreaker outside a ham
band? Can a system be set up at the ARRL to screen and funnel violation
problems to the FCC? How about an organization called "No Freebanders
International" with yourself as president?

They join the other "personalities" that hang out on the phone section of
the 75m band every night of course. 8-))

This topic comes up from time to time on the CB news group. The "typical"
answer I get, when asked why many freebanders, etc., don't get a license, is
the comment I posted. They say "why get a hammie license when I can do
everything you can do with out one." And without any meaningful FCC
enforcement activity, on or about 11m, they have a point.

If "working DX" is ALL they are interested in, they may have...but WHY face the fines and possible loss (per confiscation) of their equipment? The tests are NOT that hard to pass.

Not everything "Ham" occurs between 1.8 to 29.7mHz. HF may be "the sizzle", but the rest of it is the whole steak.

Bill:

Yes, my friend, I do disagree with it, and you're absolutely
correct about the decision being out of the hands of ham
radio operators. I assure you that I am firmly grounded in
the reality of the situation. However, here we are debating
the underlying philosophy of the code/no-code debate. I
have already accepted the fact that the decision to undo the
code requirements are the new skyscraper on the skyline,
blocking out both the Sun and the Moon. This is one of
the many reasons why I now advocate the reallocation of
as much of the valuable spectrum above 500 MHz out of
the hands of wasteful, unproductive, and technically
ininvolved "consumers" of this formerly worthwhile hobby.

> Feel free to comment to those policy makers that
> you beieve the end of code testing is just a sign
> of their imaturity in making the decision to do so.

I would rather attribute it to their lack of first-hand knowledge
of the true value of maintaining a pool of amateur radio
operators capable of proficiently employing the Morse/CW
mode.

Yes, it does. It sez (sic) that I have a complete and insightful
understanding of the present situation in the ARS.

  If he has renounced the Boy Scouts (which is exactly what it appears
he has done), he is a "former" Eagle Scout.  You cannot renounce an
organization and then turn around to claim a title in that
organization.  The world doesn't work that way, Darryl.

There is nothing "ad hominem" about calling someone a "baldfaced liar" if they are indeed lying.

Some people can't "debate" without rapidly escalating the "debate" to a shouting match. They have little or nothing to "debate" with, and/or are unwilling to accept known and established facts when presented with them. Thier last resort is name calling and fighting.

Oh well.

Steve:

Oh well, indeed! While I'm not claiming to be any kind of a saint in this regard, I believe your long-running sandbox-level quarrel with Lennie Anderson places you squarely in the category of people who should refrain from hurling aggregate projectiles -- lest you damage your vitreous abode!

>The difference is that I do have a

Of course you are subject to correction, yet once again.(Don't you ever get tired of being corrected?) The license manuals contained paragraphs and pages of   STUDY MATERIAL, not exact questions and answers.

You make the mistake of assuming the main opposition to homosexuality is coming from the religious community. In reality, just as many (nearly the same percentage) who claim no religion are opposed to homosexuality as those who do claim a religion. Therefore, your "God Squad" nonsense is nothing more than a load of BS.

> I invite readers to perform an experiment.

Now, what in the heck does that have to do with sexual gratification through homosexuality? By inject that into this conversation, you seem to be suggesting that homosexual men have short ring fingers like a female (which is as absurd as your "God Squad" nonsense).

> [snip] When the International Olympic Committee,

If they can determine maleness, they can also determine femaleness. In normal human beings, there are only two sexes out there. If you're not one, then you're the other.

> [snip] Face it, gang, to some extent being male

> is a birth defect.

Oh, brother. And are you now suggesting that we develop ways to fix this "birth defect?" Oh, that's right, I see where you're going with this now - homosexuality is the fix.

> [snip] It is perhaps incumbent on the mainstream
> to learn enough not to equate homosexuality with
> pedophilia; [snip]

I was not aware that anyone was equating anything with anything? In fact, all most are doing, when discussing this subject, is pointing out the tendency of many gay men to seek out young boys for sexual gratification.

>Neither dictionary even mentions "obsolete" under "outdated".

If so, then your 'new' dictionaries place you at an obvious disadvantage for understanding the comprehensive meaning of words, Cecil. The better dictionaries go through the words completely. No shortcuts. A lesson well learned.

>Sorry, Vince, you lose.

A laugher, Cecil. You couldn't win an argument if I handed it over.

Dick:

Thank you very much for your most gracious support. Truly, you understand a great deal more about me than others in this group could, due to having, like myself, sacrificed the most valuable and productive years of your life in the service of our country. My military experience was one of hard work, long hours, the high stress of constantly being forced to perform multiple tasks at once. I also faced the responsibility of supervising quite large groups consisting of more than a fair share of weak, lazy, and unmotivated people who were more interested in their own comfort, convenience, and the benefits of their service than they were in earning them. I carry quite a great bit of resentment over the way the military was used as an alternative form of welfare -- saddling smart, hard-working, motivated, and dedicated people with the arduous task of carrying an equal number of the opposite types on their backs. Many times I have had to take a back seat in job opportunities when they were given to less deserving people who, for reasons that had nothing to do with their job performance. I then was made to "work for" these people, and make them "look good" by doing my own work in addition to theirs, while they continued to massage their careers with square-filling activities which had nothing to do with the mission of the workcenter. When they did involve themselves, they usually made decisions which only placed a greater burden on the good workers, without providing adequate support.

I had a great deal of bad luck during my Air Force career, with regard to the type of people I had to work with and work for. My own subordinates were, for the most part, appreciative of my efforts to properly support them when they demonstrated to me that they were as seriously concerned about the mission as I was. One way I gave that support was to get rid of as many bad apples as I could, in order to not force them to have to carry that dead weight on their backs. I just wish some of my own "superiors" had shown me the same courtesy.

I admit that I carry a great deal of this "baggage" into the C/NC debate, with the desire to demonstrate my support for the strong, traditional values of the Amateur Radio Service. I fully understand that the Morse/CW mode must share a great deal

of the average ham's time and attention with all other modes.
I, myself, am quite enamored of the digital non-voice modes, but due to the fact that I was required by then current licensing standards to learn to effectively employ the Morse/CW mode, I am now a True Believer in the value of that particular communications skill. I also believe that being required to learn this skill at a practical, effective proficiency level, also led me to become a more technically-involved amateur, though I do allow that good technicians can contribute valuably to the service without it. Unfortunately, good technicians are among the minority in our now mostly consumer-oriented service.

I hope this provides some insight to others on the position I hold within this ongoing debate, and why I continue to participate therein. You obviously understand, for reasons which are both commendable and appreciated by myself.
Again, I thank you for your support.

We've went over this before, Cecil. Why should anyone prove to you the existence of anything? God is a personal experience, not something that can be handed to you on a paper plate. If you want to find proof of god, go out and find it yourself. If you're not willing to do that, then at least stop trashing those who do.

And how does DNA, or the relationship of one DNA sample to another, disprove the existence of a god?

>You can't come crying to me because your books take shortcuts.

By the way, bad texts, and those that take shortcuts are a major reason America's in trouble with education, Cecil. That's no coincidence, as even your 'new' dictionaries (apparently) show! (I'm taking your word for what you say your books say.) Another lesson well learned.

"Boyzzz, you can't even buy a decent book today!"

Not necessarily.  Masking of necessary action was not the intent of any of
my remarks.  The intent was just as I stated.  So go blow it out your ear.

From the 1957 ARRL License Manual: "If our answers sometimes seem to the initiated to be naive or incomplete, rest assured that they are sufficient for the purpose." What is it about "sufficient" that you don't understand?

Got news for you, Vince. Nobody died and made you the dictionary god.
I used the word "outdated" and "outdated" is exactly what I meant.
You dishonestly tried to substitute the word "obsolete", a word that I
didn't use. Better go practice your mind fornicating ways on someone
else - it's not working on me.

"Obsolete - no longer in use"  That's obviously not true about CW
or Morse code testing and that's why I did NOT use the word. That's
your word, Vince, not mine. Please cease your feeble attempts at
mind fornication.

Well, you're wrong every which way, Cecil. The better
dictionaries, including the better on-line ones, provide one or
more of the following for the definition of "outdated"---old
fashioned, obsolete, archaic, outmoded, no longer in use. So
you're wrong when you say "outdated" isn't equivalent
to "obsolete."

Second, the better dictionaries provide the definition for
"outmoded" as "no longer current," "not acceptable by present
standards," and "gone out of style."

Since Morse is in wide use, neither can you say that Morse
is outdated/outmoded. You don't win this one either, Cecil, even
with your chosen use of words!

Regards,
Vince, WB2EZG

Good dictionaries, Cecil, list the following for YOUR word
"outdated"---old fashioned, obsolete, archaic, outmoded,
no longer in use. So outdated is synonymous with obsolete,
any which way you turn it. Outdated is also synonymous with
outmoded, as you state. Unfortunately, outmoded means
"no longer current," "not acceptable by present standards,"
and "gone out of style," among others. So since CW
is still in wide use, you can't even say that it's
outdated/outmoded, as per your claim.

Does that mean that you now understand that passing the Extra exam is
a requirement for ENTERING into the set of Extra class licensees? It
is not a graduation certificate.

Cecil:

Just exactly what do you "hate" about the code testing requirement(s)? Hate is a pretty powerful emotion, and there is always an underlying reason for it. I'm curious to find out where this passion comes from.

I also used to "hate" the Morse code testing requirements, but that was because, at the time, I possessed a very immature, irrational, self-centered and short-sighted attitude toward them. I wanted the instant gratification of being able to communicate globally, preferably by voice, via amateur radio -- without having to learn no steenking Morris Kode. My attitude changed because I matured, and grew out of my selfish, insecure way of thinking and was able to accept the requirement based on the fact that it produces a valuable communications skill and the dividend of greater operating privilege. What I want to know is -- what's YOUR problem?

Because I am forced to live under a set of laws that assumes, without
proof, the existence of a God.

> And how does DNA, or the relationship of one DNA sample to another,
> disprove the existence of a god?

It doesn't disprove the existence of a God. It just makes God
unnecessary. Homo Sapiens are not special at all.

"Obsolete" means no longer in use. "Outdated" does not mean no
longer in use. I used the word "outdated". I did NOT use the word
"obsolete". Is mind fornication the only discussion technique that
you have left?

> Since Morse is in wide use, neither can you say that Morse

> is outdated/outmoded.

I didn't say that Morse is outdated. Here's what I said:
"As an entrance requirement, it is simply outdated and therefore
is in the act of being dropped."

What is it about "entrance requirement" that you don't understand?
Morse/CW is not being dropped. Morse code *TESTING* is outdated and
is being dropped.

I hate that a good friend of mine, who had an engineering degree, a
commercial radio license, and a job as chief engineer for an AM
broadcast station, was barred from HF ham bands for 25 years just
because he was unable to get beyond 10wpm even after thousands
of hours of practice. He's an Extra now so exactly what good did
it do to bar him from HF for 25 years? Walk a mile in his shoes,
Larry, and get back to us.

True enough, Bill, but within the Amateur Radio Service, Morse code use is significantly higher than "occasionally." Within the Service, the code is not obsolete at all.

It is obsolete outside of the Amateur Radio Service.

"Obsolete" would be among the more mild terms used to describe a few of my cars! Though the "Deathmobile" (my '78 GMC pickup) does have a new clutch in it now. But the used 4-speed I put in it seems to have a spun bearing or two. But it still goes, and I am hoping it wears in. :-)

I imagine that more people use Morse code within the Amateur Radio Service than conduct emergency communications. Yet there are still questions on emergency communications procedures.

I still like your original idea of having a Morse code test as a part of the overall exam, with a reasonable number of questions about the content of sent text being included in the written exam. It is a compromise that puts Morse code on the same par as other operating modes and techniques that are "occasionally used" within the Service. Completely eliminating Morse code testing appears to be letting the pendulum swing too far in the opposite direction.

Whew, for a minute, I thought that you saw me as the enemy. Your definition also lets Bill Sohl and Rick Tannehill off the hook. Carl Stevenson has acutally used it on the air, so he is cool, too.

Who IS this alleged enemy, Dick?

>In what part of the EM spectrum has the FCC "sold amateur frequencies
>to the highest bidder?"

They haven't yet. That's what we are trying to avoid. Of course, since you are NOT a part of Amateur Radio beyond your own shortsighted agenda, you wouldn't know that.

>Is this something new not covered in the FCC's Daily Digest? Or is it
>some urban myth reborn out of a need to rationalize some paranoia?

How would YOU know about anything in the Digest, Your Putziness? Only 5 days ago you stated that you are not subscribed to it.

And anyone who IS active in REAL Amatuer policy matters would know about the recent attacks on Amatuer allocations.

>The latest and recent-past EM spectrum auctions concerning new
>radio services are on the FCC Wireless Telecommunications
>Bureau home page. None of those are "selling amateur frequencies
>to any highest bidder."

Not everything that threatens ANY allocation is on the FCC's pages. Ask the folks at the ARRL about ONGOING moves against 2M and 70cm. You won't find that on the Digest recently, but it IS a very real threat.

>>It is a mistake to put all our eggs in the emergency communications basket.

>Part 90, Title 47 CFR, has regulations for US Public Safety Radio
>Services. The California Auxilliary Communications Service (ACS)
>integrates amateur emergency communications into a statewide
>emergency plan. Integrates, makes amateurs on an equal footing
>with professionals. Omelettes taste better when mixed well.

Which, you arrogant twerp, still leaves the other 49 states, Puerto Rico, Guam and several other American protectorates in the formula.

It would seem the only thing here "well mixed" is your brain.

One of those laws is "thou shalt not kill." Should we get rid of it,
just to make you happy?

Until a little over a century ago, radio had not been discovered. Does
that mean that it didn't exist for those thousands of years of human
history which preceded that discovery?

It wouldn't be the first time.

Or haven't you seen them make references to ham radio when they meant
CB, and vice versa? Or the time that they declared that "the gunman was
carrying a .380 magnum semi-automatic revolver."

The AP only passes along stories from members.

I see, so the doom and gloom is not actually here, but it is coming...

Okay, let me see if I can find a variation of the question you are willing to answer.

What rules changes do you think the FCC will be making in the forseeable future that will prevent you from doing things in ham radio that you are able to do today?

Fraid it is, Bert. I tried the "nice guy, roll with the punches" position for several months, but some people in here can only be dealt with in certain language and demeanor.

You just can't be a "nice guy" any more and have anyone appreciate that simple virtue. I assure you that I have my patience and tolerance levels, but some people CAN push the button sufficiently to let the sharks swim.

There are a few folks here that can't really face facts, nor can they accept "I understand your point but I don't agree" as a response. A (thankfully) few find it necessary to analogize anyone who is NOT of thier particular opinion with neonazis, brownshirts, thugs, etc.

I don't tolerate that. No one HAS to tolerate it. No one should.

>communications technologies ***which are in use in the ARS***.

It is important to Amateur Radio that its communications technologies have relevance to the communications technologies in use in the rest of the radio world.

Had Amateur Radio not had such relevance when it was created, it would not have been created.

Had Amateur Radio not had such relevance after WWI and WWII, it would not have been brought back to life.

If Amateur Radio sets itself apart from the rest of radio techology, we are making a big mistake.

Ed:

So, you're saying that the ARRL should fight tooth and nail to preserve, support, and defend the remaining 5 WPM Morse code testing requirement for a General- or Extra-class license? Wow -- you're really sticking your neck out on that one, aren't you? After reducing the code testing requirement down to the level of absolute meaninglessness, you begrudgingly allow that it now should be retained ad infinitum. How magnanimous. A code test that a person can pass without knowing the Morse code at a useful proficiency level is the one which should be kept forever. Well, I happen to disagree. It is now time to show the world exactly what the ARRL, the equipment manufacturers, and the amateur radio publishing houses really think of the ARS' most uniquely practical, effective, efficient, and universal mode. Which is nothing at all. Nothing except a potential barrier to their economic success, that is.

I say eliminate code testing in its entirety. I also say reallocate huge chunks of our valuable spectrum above 500 MHz to more productive and profitable commercial broadcasting and communications services. One hand washes the other.

For a man who put some much credence into the opinions of others as it
related to their affiliations, why is he allowed the privilege of stating
his opinion apart from the organization. Sorry Bill, he set the rules a
year or so ago, especially when it came to Ed and the ARRL. He sets
them, he plays by them. Can;t separate the 2 just because it suddenly
seems advantageous to you and your organizations stated goals.

Seems to me, being on the bands that they honor the sub bands, however
less and less. Maybve you should actually spend time on the HF bands.

Personally, Ed, I'm totally in favor of the entire lot. I have absolutely nothing
but the
greatest of enthusiasm for whatever technological wonders the ARS can bring to me.
I have always embraced cutting-edge technology as a radio amateur; I can't get
enough of the digital modes, mainly due to the fact that not enough of my fellow
hams
in this area could be bothered with anything more intellectually taxing than
picking
up a microphone. I've seriously thought of moving to Wilmington just to be within
range of Baltimore's ATV repeater system. The difference between me and the
NCTA is that I realize that Morse code proficiency and technological advances can
coexist, whereas they insist that the two must be mutually exclusive. You tell me
--
what's up with THAT?

In reality, Ed, I am not anything close to the egomaniac you think I am. I am very

well grounded in reality, and I have no illusions about myself as a person or as a radio amateur. I'm just a normal, ordinarily talented individual. Yes, I will admit
to higher than normal intelligence, but I seem to lack common sense. If I had any, I probably wouldn't waste valuable time in this newsgroup.

It does? So you advocate bringing back the 13/20wpm code tests so
hams will use code above 500 MHz in order to save UHF spectrum?
I, personally, fail to see the relationship between code testing
and ham spectrum above 500 MHz.

In article <3ae04e8d.1313113@news.mindspring.com>, Bill Sohl says...

>>NCI (which by the way is a registered trademark of the National Cancer
>>Institute)
>
>Who cares, we have nothing to do with the medical industry.

The National Cancer Institute probably cares a lot, since they use that little
"circle r" � thingy after their logo on their literature.

Cecil:

One thousand hours is 41.666 days. I went from nothing to 20 WPM in probably 100 hours or less of sending/receiving practice, including scores

of
on-the-air QSO's. I seriously doubt that your friend invested anything
close
to 1,000 hours of code practice. Is there anyone out here that can believe
Cecil's claim?

BTW, I am completely empathetic wrt your friend's "biological handicap,"
if one actually exists. However, I don't subscribe to the notion that
having
an amateur radio license of any particular privilege level is any kind of
"right."
There will be certain people who, no matter what happens, can not be
included among the rolls of radio amateurs. Life is like that. I wasn't
able
to make a career as an Airline Captain because of my eyesight. Do you
think an affirmative action program should have been in place to prevent
me from being "excluded" due to my "handicap?" Remember, with my
eyeglasses, I have BETTER than 20-20 vision. Airline pilots whose vision
deteriorates with age and require corrective lenses are allowed to use them
without being denied their pilot's licenses. So why wasn't I even
considered
for this type of work just because I would have been wearing corrective
lenses from the start? Nevertheless, I accepted the requirements in place
for
both a commercial pilot's license and the Amateur Radio Service. Your
friend proved he was able to live without HF amateur radio privileges just
as well as I was able to live without a career as an aviator. Your argument

has made absolutely zero points here.

Jerry:

You raise some good points about allowing local governments to enforce rules against illegal CB equipment. Perhaps the best way for local governments to proceed is to enlist the help of hams in the area who can work as a volunteer advisory committee to point out offenders. Just as local jurisdictions have competent engineering help in other technical areas, they can hire commercial engineering firms to help prosecute offenders they have identified.

Then what I would *really* like to see are sting operations at CB stores that sell illegal equipment, as well as "sweeps" at big truck stops along the major interstates!

>This "protection" exists in the regulations of only
>a small number of countries worldwide. The vast
>majority the ITU signatory countries do not divide
>the amateur bands up be mode, yet we do not see
>"hordes" of Canadian or Japanese or Chinese SSB
>signals descending on the CW end of any band.

This is primarily due to two facts:

(1) With the exception of Japan, we pretty much have the corner on Amatuer Radio operators. Ergo they can afford to let the few Amateurs in thier various administrations be "self-policing" in regards to sub bands.

(2) The Japanese society is very disciplined. If you tell them to NOT operate in certain parts of the spectrum they won't do it. No problem.

>Even in the US, 160 meters has no such "protection", yet
>SSB, CW, and even AM stations seem to coexist just fine
>on that band.

And the relative number of Amatuers operating on 160 meters is....?!?!? Also, the same "lure" of easy DX does NOT exist on 160 meters like it does on the HF bands. If Lower Slobovia starts calling "CQ" at 14.030 SSB, you can bet that the kilowatts will be lined up from 14.000 up.......

>Waffle all you want, but the evidence disproves your "the sky will fall on CW" jeremiad.

Will the "sky fall"...?!?! No...Will CW as an art disappear...? With the exception of a few diehards, yep.

Nope. But its easy to see that you are of the "gimme my privileges,
forget the responsibilities" school.

There's a huge trash underway at very high levels in the BSA heirarchy
over this bullshit. Individual troops have cut their ties with the
organization and continuing on their own. There are rumblings at the
council levels about pulling out of the national organization.
>
The problem is not morality or depravity or righteousness, the problem
is that there is no excuse or rationale for the Boy Scouts to get
involved in matters involving sex one way or another. National is a
bunch of Bible-pounding old farts in Dallas who have done a loverly
job of screwing up the whole movement by injecting issues into
scouting which have nothing to do with scouting. .

From this I glean one definite point of agreement- ARRL has a long
history of vaccilation.

I work with a guy who was a South Vietnamese fighter pilot in that war.
Even among those guys, Chuck Yeager is a hero. Since Gen. Yeager says there
are no old, bold pilots, I guess I'll take his word for it.

No. Within the context of my remarks, it's true.

Read more carefully.   Contracts are awarded in a bidding process. Most
contracts are awarded to the lowest bidder. You started this, Leon. Live
with it.

> You are full of surprises, Dick.

You are full of misinterpretations, Ed. Never have I said that hams must be technical geniuses, like Cecil claims to be. But neither do I agree with Cecil and you that hams need not know anything serious about radio technology.

You guys seem insistant that hams learn 9only newer mode technology, while your cavilier attitudes toward anything older than yesterday is amazing. Most ham radio communication is done with old technology, and so shall it be for some time to come. Sure, hams have long been able to get by somehow or other on little no knowledge, not that they have always been that productive at it. When one doesn't know how to make an antenna nor troubleshoot a defective one effectively he is sort of hamstrung when trouble strikes. But they press on, oblivious to their own plight. Why not see to it that they get some effective training in advance? How to better accomplish that than to have effective tests, rather than testing them over sattelite operation and other mundanities they more than likely won't soon see?

He never needed to copy Morse code at more than 5wpm in order to use HF.
Why would you claim he was "kept off of HF"? Or was that just another
exaggeration.

I already know "the rest of the story."

> His experience changed my mind about Morse code testing.

Seem it takes a lot more than one guy to change your mind about anything,
Cecil. I'm not convinced. But I formed my opinion about code testing in a
similar way. I knew guys who had been hams for 20 years, and didn't have
the privileges I did as a new guy - just because I could do the code and
they couldn't. I didn't think that was right.

My computer shows that the post which suggested digging and filling an 8
cubic yard hole 20 times was posted by W6RCecilA. Are you claiming this
information incorrect? If not, then it was your idea, and I claim you are
therefore responsible for beta testing it. :-)

Careful Ed, your True Colors are beginning to shine.
CW can overcome much QRM but no one wants to have to tolerate that sort of crap continuously, few will do it. A mode war would soon ensue and I imagine FCC realizes that. Perhaps that was a reason no change was made to band segments. We hope they are at least that aware up there.

In article <20010420121029.29693.00000271@ng-fc1.aol.com>, Steve Robeson LPN says...

> Will CW as an art disappear...? With the
> exception of a few diehards, yep.

Many ancient "skills-cum-arts" have disappeared, except among a core of devotee's.

..muzzle loaded muskets
..farriers
..archers
..steam threshers
..hand-cranked automobiles
..sail driven cargo ships
..the village smithy
..home-made soap and candles
..etc., etc., etc.

At one time these skills were all important parts of mainstream society, but now are quaint arts practiced by "diehards" (your term). So also it is with those of us who practice the art of radiotelegraphy.

So be it.

Quoting from the 1957 ARRL License Manual: "The privileges available to the Technician are all those amateur privileges in 50-54 and above 220 Mc., ..." His Novice license had expired after a year and the only way for him to continue as a ham was a Technician license with *zero* HF privileges. Yes Jim, as a 1958 Technician, he ***indeed*** was "kept off of HF".

> Seem it takes a lot more than one guy to change your mind about anything,

Nope, all it takes is one person, Jim. Can you imagine a murderer's plea, "But, I only killed one person and I deserve mercy because of all the people I didn't kill."

To All Cybercitizens,

The official launching date for our global broadcast: 1 November, 2000 is supposed to be a celebration marking the completion of Global Media Network. But as you're well aware, the reported break and enter, theft and other crimes committed by the Vancouver police which, if unchecked, have the potential to destroy human civilization. We offer our service as an impartial, fair, unbiased media. Our media network possess the power to illuminate the far corners of the globe, not for higher profits, but for higher understanding between the people of this great planet. We are proud that our media network, as its name implies, has the ability to reach every corner of the earth. We offer our declaration of principles to the men and the women, to our every brothers and sisters in the planet whom we humbly serve. We promise to report the news without fear or favor, to be a force for good in this world, fighting injustice, crushing intolerance, battling inhumanity, striking a blow for freedom at every turn. These are the goals of Global Media Network. Join us and visit our official web site at http://globalmedianetwork.org

Global Media Network proudly presents REVIEW OF ONE OF THE TOP NEWS OF THIS MILLENNIUM:- BURGLAR WATCH-A STATE OF WIDESPREAD STINK, OPPORTUNISTIC & RAMPANT THIEVERY, PLAQUE, CHAOS, BARBARISM AND LAWLESS-A GLOBAL REPORT OF BREAK & ENTER, THEFT, TREPASS, FRAUD, FABRICATION AND COLLUSION CONSPIRED BY VANCOUVER POLICE

ENACTMENT OF THE INCIDENTS [DETAILS PROVIDED BY THE VICTIM]:

On 6 June, 94. the victim went out at 2:30 p.m. from his apartment. When he gone back at 2:37 p.m. he discovered that both his apartment and his bedroom were broken and entered. He discovered that his newly bought hi-fi components (bought at A & B Sound) and forty CDs (costed CAD$2,000) were stolen from his bedroom. When he reported the crimes to the police woman badge # 9082, who admitted the fact of surveillance two years afterwards in 1996, she behaved very arrogant. She purposely hanged up the phone several times in order to aggravate him.

Being alerted of constant harassment, out of suspicion, in 21 September, 96, at 6:00 p.m., the victim confirmed with the same police woman badge # 9082 via 911 that the Vancouver police had placed the audio and video surveillance devices inside his apartment. She refused to remove them and asked him to remove them. The Vancouver police were very familiar with the environment inside the apartment. In other words, the Vancouver police specificially targeted at the victim's properties that were located at his bedroom and knew exactly when the residents inside left the apartment. When the residents left the apartment on 6 June 1994, at 2:30 p.m., the Vancouver police sneaked into his apartment, stolen his properties and left within a minutes.

In July, 96, he called the Vancouver police in 320 Main Street, Vancouver, a male police who had sneaky remarks (about twenty something years old, caucasian) lied that the former chief constable Ray Canuel was in Atlanta, Georgia so that he could not handle the complaint. Afterwards, he sent a letter to Ray Canuel (deceased of cancer) in the same month without hearing any response. He then presented the complaint in person directly to the assistant to Ray Canuel. The assistant deceived him that the Vancouver police wouldl respond to his complaint three weeks later. The complaint aroused the police's revenge. Two polices without search and arrest warrant trespassed his apartment in Feb., 97. One caucasian police opened his complaint letter which was originally sealed without his consent and he was falsely arrested by the two polices. One of the police were a Chinese who were about 5"6, 160 lb., black and short hair. Another police were a caucasian who were about 6"2, gray and long hair whir covered his trim, gray-blue eyes, about 220 lb.. Both polices were thirty something years old. The latter one misrepresented and called himself as former Chief Constable Ray Canuel (deceased). The two polices committed trespass and false arrest.

The fact that Vancouver police are morally corruptive makes no difference to his efforts. When the victim filed the complaint through other formal channels three years afterward, i.e. 1999, he received a fabricated letter from Sergeant Mike Bernard, Office of the Chief Constable, Internal Investigation Section, Vancouver Police Department dated 20 May, 99, falsifyinging that police badge #581 Dave Turpin, Tony Zanatta had conducted the investigations. Indeed, they never contacted him nor take any report.

On the other hand, given the Vancouver police are coercive that they collude with every party the victim seeks help from or affiliates with. When the victim booked an appointment with a security company, APC Security in Burnaby, B.C., to do a further sweep on his apartment, the Vancouver police colluded with the company not to show up at the appointment on 26 July, 99. The same circumstances happened for Brian Brown & Associates INC, owner: Brian; operator: Laurie. Ph. (604) 2912121 and Interglobe Investigation Services Inc.. On 6 Aug., 99, the Vancouver police called the property manager of Crosby Property Management Ltd. to follow him when he walked to the garden. The property manager purposely aggravated him and tried to fight with him. The property manager asked him to complain to the management (instead of the police complaint authorities) so that they can cover up the conspiracies....

Please join our global action together with ALL media and ALL political leaders ALL over the world that have received our attention.

>hams -- they must gain this knowledge on their own.

The people YOU need to impart such knowledge to
are not prospective or current hams, but rather those
subject matter experts on radio regulations that the
various country administrations will send to WRC-2003.

As a front-end to that you can try to convince those "inside"
amateur radio as to your beliefs by having the IARU
support your position...since the IARU is often looked
at for guidance on such issues by the WRC representatives
from each country.

As a front-end to that you can try to convince those "inside"
amateur radio for each country as to your beliefs by having
that country's national organization (e.g. ARRL for the
USA, etc.) support your position...since each respective national
organization is often la party to the IARU decision process for the
individual region it is in (e.g. Regions 1, 2 and 3).

> I can always
>make the attempt to relate my experiences, but that, from their
>point of view, is merely anecdotal evidence of facts they have
>yet to determine for themselves to be true.

Glad you understand that. The policy makers address
such issues based on facts, not isolated anecdotal
evidence. Now if such anecdotal evidence is of sufficient
quantity, hen it can be viewed as significant, but without
such quantity, the isolated incident here and there won't

do it.

>In the absence of the requirement to be tested for CW proficiency at a useful level which would encourage continued on-the-air use of the mode, the problem becomes one of motivating an individual to gain this skill.

I have absolute faith that any argument based on "motivational factors" will not be given any merit by the WRC policy makers anymore than it has with the FCC.

>With the incentive of higher operating privileges already given away for free, there no longer exists any reason for becoming a proficient CW operator.

You are into circular argument again. The first priority for you is to CONVINCE the policy makers that there MUST be a pool of "proficient CW operators." You haven't done that.

>The mere words of CW esthusiasts like myself may not necessarily inspire people who are motivated by amateur radio activities which provide more readily attainable gratification.

Not everyone can be inspired to play golf, to learn CPR, to do (insert any activity you want). The fact remains, however, that if something has some enjoyment/interest for even a small minority of people it will keep a following of loyal users. The burden, however, is on those loyal users to "recruit" new loyal users. That is no different for people that "recruit" others to play golf, to buy, restore and enjoy antique cars, and YES, learn and use CW.

> I can always try, of course, but to be perfectly honest, I am not really interested in "recruiting" CW operators.

Belive it or not, I wrote my prior comments with the "recriting" wording before actually reading this one. The sad commentary of your statement is that you really don't care enough (IMHO) about CW to be a champion of the mode you want every ham to be proficient at. That's a major hypocracy in my book.

>I would prefer to see them come about through a process which I feel develops internal motivation to learn and gain proficiency in the mode. I believe in incentives -- they work virtually every time they're tried. I believe in the testing requirement -- it worked for me and for millions of hams before me.

We obviously disagree, because I only believe in incentives

based on requirements which are related to those incentives.
One example that I personally would endorse is lower power
for the entry license. I believe higher power should then
be tied to the requisite knowledge in the higher license
test syllabus that can show the safe, sane and proper use
of higher power. NOTE: This is BILL SOHL's personal opinion
and NOT an NCI position.

>>>> > Unfortunately, new hams coming into the service after

>>>
>>>Yes, it does. It sez (sic) that I have a complete and insightful
>>>understanding of the present situation in the ARS.
>>
>>In your opinion anyway.
>
>Precisely. Everything I state in this newsgroup is MY opinion.
>I also know for an absolute fact that MY opinions are shared with
>a great number of my fellow hams, in and out of this newsgroup.

But, clearly not enough to influence the FCC with sufficient
facts and/or anecdotal examples to sustain the continued morse
requirements of 13 and 20 wpm today...and, likly the end of
any separate stand-alone testing of morse after WRC 2003 (IMHO).

>I am not put off by the fact that there are people out there who
>disagree with me. At least, not as much as you and a lot of the
>no-code test supporters seem to be. Why is that?

Larry,
I have no problem with disagreements and other opinions
which are discussed, debated, shared in a light of
the pure academic exercise of such debate and/or to influence
others. The problem I see, and to which you and others
oft go to, is the attempt to portray others that disagree
with the pro-code position as being "lazy, shiftless, etc.
The reality is that thousands of us that have taken the stance
in opposition to code testing have long histories of being
highly motivated, successful, and anything BUT lazy, shiftless, etc.

Cheers and thanks for at least a reasonable response.
We obviously disagree, so be it.

When one of the connecting rod bearing halves gets loose enough to
slip and "spin" out of position. It is usually a combination of worn
bearings and worn crankshaft journal. It happened to a SIMCA
I once owned.

All that proves is that *you* are capable of learning Morse code. Are you capable of dunking a basketball? Some people find it just as hard to become skillful at Morse code as you find it hard to become skillful at dunking a basketball. Again, Larry, your attitude is let them eat cake. Well, the FCC gave you exactly what your Royal Highnee deserved.

> I wasn't able
> to make a career as an Airline Captain because of my eyesight.

Did the feds keep you out of any National Parks because of your poor eyesight? If not, your analogy is invalid. Being an Airline Captain is a commercial life and death situation. The national resource of Amateur Radio, open to all qualifying citizens, certainly is not.

Dick, when you can't or won't answer a question, wouldn't it be better
to be silent than froth some drivel out of your mouth, errrr, keyboard.

Nope, it's Dick who favors work. If you read my posting, you know I said
I don't believe in work so I can't possibly be responsible.

You can't sue your local police department for not protecting you from
criminals. I assume the same principle applies to the FCC.

The reality is that may have been the case in the past and
it has been generally accepted now by everyone (well most
everyone) that we each have individual opinions that can
and do differ from the organization's policy (be it ARRL, NCI
or any other). Your reliance on a two year old stance on such
attitudes is flat out wrong, and it is not "suddenly advantageous"
to state what I did because this has been so for quite some time now.

So why isn't the IARU taking a stance? The issue is yours,
not mine.

The fact remains that people use acronyms for many things.  I'm
sure that one can find such acronyms of NCI used in many
ways.  Unless there's some deliberate effort to mislead folks,
nobody cares.

Larry,
Again you mislead others in your post.  The NCTA (No Code Test
Advocates) have no problem with you or anyone else learning and using
code.  Code learning (voluntarily) and use can certainly coexist with
technology advances the same as my antique auto can coexist
on the highway with the latest from the auto makers.

I believe you CAN sue the police for not protecting you if you can establish negligence...they knew there was a threat, but did not act. Similar types of suits are used regularly by environmentalists against various government agencies for not enforcing their rules. Examples include suits to place various animals and plants on the endangered species list.

Maybe Larry will listen to that German General who said he valued brilliant, lazy officers above all others. He said they figure out the easiest way to win the battle with the least effort.

The issue is the "requirements" not the learning of
old or new modes. I don't care if anyone wants to
be an expert code user, be an expert on tube circuits, etc.

>Most ham radio communication is done with old technology, and
>so shall it be for some time to come.

Depends on the scope of what you consider technology.
Is SSB and FM old as to the mode itself? Sure it is.
Is the transciever that I use to operate SSB or FM old
in terms of the solid state technology, the DSP
circuitry, etc? Not at all.

>Sure, hams have long been able to
>get by somehow or other on little no knowledge, not that they have
>always been that productive at it. When one doesn't know how to make an
>antenna nor troubleshoot a defective one effectively he is sort of
>hamstrung when trouble strikes.

Most antenna technology is VERY old when compared
with the rest of electronics.

>But they press on, oblivious to their
>own plight. Why not see to it that they get some effective training in
>advance? How to better accomplish that than to have effective tests,
>rather than testing them over sattelite operation and other mundanities
>they more than likely won't soon see?

Of the following, what should be part of testing:
Antenna theory/design

Tube theory and tube circuits
Transistor Circuits

I agree that some of the subject matter in the
testing syllabus is truly nutty. Who cares how many
months before/after one operates a space station that the
FCC has to be notified. Who cares what the frequency
is for black in ATV, etc. Many of those factoids are
meaningless until a person has the interest in and
actually starts using/trying some of those modes.

Cheers,
Bill K2UNK

Such "competent commercial engineering" help costs over $100 an hour.

Right on target. The courts will not substitute their judgment for the FCC's judgment of enforcement priorities. And the FCC has the ultimate reply anyhow - lack of $$$ from The Congress.

>You raise some good points about allowing local governments to enforce rules against illegal CB equipment. Perhaps the best way for local governments to proceed is to enlist the help of hams in the area who can work as a volunteer advisory committee to point out offenders. Just as local jurisdictions have competent engineering help in other technical areas, they can hire commercial engineering firms to help prosecute offenders they have identified.

My erstwhile clients (the sheriff departments of three Bay Area counties) want no part of dealing with the CB problem even though they have excellent in-house and on-call engineering and enforcement assistance available. They look at it as one more pack of "mickey mouse" (i.e. not "real public safety") rules that they would get stuck with enforcing with no increase in staff or budget.

>Then what I would *really* like to see are sting operations at CB stores that sell illegal equipment, as well as "sweeps" at big truck stops along the major interstates!

The enabling legislation does not give the locals any authority to enforce marketing regulations, only operational regs.

  That's cheap. The firm that I consult for/with charges a lot more
  than that, and has five of the nine Bay Area counties as long-time
  clients because they do the job *right*.

Dear Congressman Snarf,

The CBers are transmitting on 10M. Please have the FCC make
them stop.

Love Always,
Joe Ham

Dear FCC,

Enclosed is a letter from my constituent, Joe Ham, a fine upstanding citizen. Please advise this office of your action on this important matter.

Love Always,
Joe Bureaucrat
(Assistant to Honorable Congressman Snarf)

Honorable Congressman Snarf,

Thank you for forwarding the letter from your constituent Joe Ham.

As you are aware from the recent budget hearings, the FCC will need a significant increase in funding to fully deal with this and hundreds of similar matters in a timely fashion. Until then, we will devote resources on an "as available" basis.

Love Always,
FCC

Dear Joe Ham,

The FCC is looking into it.

Love Always,
Congressman Snarf

I'm absolutely sure you're the one who suggested a new kind of ham
license that required an unprecidented amount of work. I'm equally sure
that it wasn't Dick's idea.

W6RCecilA wrote: "Maybe we should have a special ham license for guys
like Dick.
Anyone who digs an eight cubic yard hole and fills it back up a total of
twenty times gets an Extra class license."

Your exact words were, "because I am forced to live under a set of laws that assumes, without proof, the existence of a God." Since you did not limit the scope of the laws you mentioned in any way, than it is only reasonable for a person to assume your were talking about all of them. Instead, it now appears you were talking about one law (no alcohol sales on Sunday) as that plural "set of laws."

> One cannot prove a negative. On the subject of
> God, one cannot even prove a positive. I cannot

> no evidence. [snip]

Then don't believe in such things, Cecil. Absolutely nobody is forcing you to believe, or not believe, in a darn thing. So why don't you extend the same courtesy and allow others to believe, or not believe, in what they want? Why must you constantly challenge the beliefs of others in these newsgroups?

And your nonsense about the laws against beer sales on Sunday just doesn't cut it, Cecil. If you don't like those laws, than attack those laws - not the religious beliefs of the people behind those laws. I have no problem with those laws at all, Cecil, and I'm not in any way religious. So what belief of mine are you going to attack in an effort to get me to change my mind?

Bert,

In essence, that was 'feel good' law, designed to get constituents off their backs. While it *may* stop some interference, I am inclined to believe that it isn't effective for the following reasons:

1. Local Law isn't qualified on the subject of electronics to discern a legal radio from an illegal one. He *could* mistake a power supply for a linear because it says "amps" on it.

2. *Would* they consult FCC for advice as provided for in the law before declaring a licensed ham's station "illegal" and ordering him off the air, or confiscating his equipment.

3. *Some* jurisdictions could smell money and attempt to go after fines and fees. Opens the door for corruption on the local level.

Having said that, won't you join me in writing to your Congressional Representatives and asking that funding be restored to FCC to combat this problem of illegal operations that has far-reaching consequences if it is not stopped. Tis the only weapon we have!

Do you realize how silly that sounds, Cecil? You sound like a five
year old saying "pee pee" instead of penis. The word is "nigger" - a

word that has been in the dictionary just as long as the word "gay" to describe homosexuals. Sadly, if the thought police are successful at getting people to use "the "n" word," instead of saying the real word, then it will not exist in dictionaries of the future (several dictionaries have already caved in to the thought police and dropped it).

Guess I am not the enemy then.  I could care less
about the code itself, I would encourage anyone to
make their own decision as to using code...it is only
the code test that I oppose because it has no rational
need to be.

Cheers,
Bill K2UNK

Why Larry, why can't you be the source of that "first-hand
knowledge" which you can then share with them to
convince them to leave the test alone?

  Most of the time it's because the US Attorney doesn't want to get
  involved in anything less than million-dollar asset forfeitures so
  the agencies are told not to bring cases to them.

  I know of several cases that have excellent evidence but have been
  at the US Attorney for years.  They have their own problems, too.

  It comes to a head when the pirate gets involved in other criminal
  activity or causes harmful interference to public safety or
  government communications.  Then the priority changes.  Same with CB.

If I had meant "all", I would have used the word "all". The particular
set of laws to which I was objecting are known in Texas as the "blue laws".

Everyone is free to believe anything they chose. But your freedom to
swing your fist ends at my nose. Please keep your religious laws to
yourself and stop screwing up my life with them.

> So what belief of mine are you going to attack in

The Texas blue laws are state-wide, not community-wide.

> Why don't you offer objective
> evidence that a supernatural realm does not exist?

Please offer objective evidence that you are not a rapist. It is impossible to prove a negative. The onus of proof is upon the person who asserts the positive premise. That's you, Dwight. Prove away.

Exactly what are we giving up, Dick? Have you lost any privileges?

>>Len, DAMN IT!

>Profanity will not make your point in this newsgroup (there are too
>many in here of victorian tastes who think that is smut).

I DON'T believe you said that, Lennie. You make liberal use of profanity to (uneffectively) emphasize your comments.

>A lot of discussion on Marine Radio isn't about ham radio at all.

It is when that operation fosters illegal operations that migrate to Amatuer allocations.

>A heap of abuse piled on CB might be justified
>because the FCC stole the wholly-owned and operated
>11 meter band from US radio amateurs 42 years ago.

If you think that's the reason any of us are adamantly against the proliferation of CB type operations on unauthorized frequencies, you are a bigger idiot than I thought, and Lennie, I already know that you're a pretty big idiot.

>Oxendine has posted to all of those threads...and a couple of
>others which have nothing directly to do with amateur radio.

Pot/Kettle/Black. What's your point. You have pontificated long and wide on topics having NOTHING to do with Amatuer Radio, yet you freely castigate others for doing it.

Putz.

>...now why must there continue to be a morse code test for
>amateur radio licences other than ITU-R S25.5?

YOU are the ONLY one arguing this, Lennie. The rest of us have tried to move on, but you keep INSISTING that "EVERYONE" is trying to somehow retard the growth of Amatuer Radio by insisting on keeping code testing.

Like it or not, just about everyone here EXCEPT YOU has accepted the fact that the FCC will dispense with code testing after the treaty has been ammended and ratified.

>Forgive me, morse code testing may not be about amateur
>radio? Inform the civilians who know nothing about nothing
>because they aren't licensed in the amateur radio service.

We forgive you for being ignorant, Lennie.

We forgive you for being arrogant.

We even forgive you for being intolerant.

But the "Persistantly Nagging" thing is really getting to be a problem.

Again, whether any one of us particularly like or dislike the end of code testing, we are getting on with the business of BEING Amateur Radio operators. That gives us a LOT of room to navigate in, from the basement of the RF spectrum to daylight.

On the other hand, since you refuse to get a license, you are stuck with Part 15 devices, CB radios and TV remotes.

(And don't even THINK of getting into that "I have unlimited access since I have a "commercial license" rant. You have NOTHING without a STATION license...it says so right on the back of your GROL)

Once again, Lennie the Licenseless is relagated to being on the outside looking in...doomed to be the sopping wet kid with his pitiful nose pushed up against the bakery shop window.

Lennie is the Darth Vader of RF. We all know that inside is a nice guy who WANTS to be a part of the party, but he has been too long swayed by the Dark Side...It won't be until his demise that he finally realizes that it COULD have all been his.

Cecil:

Admittedly, nothing was gained, but nothing was lost, either -- except perhaps from his personal point-of-view. However, this loss was self-imposed, due to his unwillingness to meet the licensing standards in place at the time. It has been proven that people from all walks of life -- including Ph.D's in Electrical Engineering with commercial radio licenses and an armload of professional credentials in the field of electronic communications, can master the Morse Code at a useful proficiency level. So can people who are mere radio hobbyists, who don't have anything even scratching the surface of professional electronics knowledge. If you don't mind my akxsing (just a little Ebonic lingo thrown in to demonstrate my multi-cultural sensitivity) an often repeated question -- what is your point?

The really sad part, Dick, is that I believe that you see it that way.

I hate to be the one to break it to you, Dick, but the FCC has made its decisions wrt code testing and volunteer examining and question pools quite some time ago. There is nothing to capitulate.

I guess I feel that unity is more important to ham radio than is your personal need to vent your anger about the FCC's decision on those who have done no more wrong than to do what the law requires to get a license. To me, the unity of ham radio is a more important tradition than nearly any other. It is too bad that some are choosing to trample our fine traditions.

>>Unlike other bidding
>>processes, things being sold at auction go to the highest bidder rather
>>than to the lowest bidder.

>What other auctions sell to the "lowest bidder?!?

Let's read that sentence reeeeeeeal slooooooow for Lennie.

"Unlike other bidding processes"......(SNIP)

Bidding processes...IE seeking bids to perform a task for hire or provide goods to a governmental or commercial entity,

"....things being sold at auction go to the highest bidder rather than to the lowest bidder."

In an auction where one seeks to PROCURE services or materials, they seek a competitive price by inducing the prospective vendors to provide the LOWEST price.

In an auction where someone seeks to sell or lease something of VALUE, they seek the HIGHEST possible price by competitive bidding of the CUSTOMERS.

Where in that thought process do you get lost, Lennie? Fourteen years of school melt your brain?

>What particular amateur radio bands are now under consideration,
>or even hinted at being under consideration for reallocation?

Just about everything above 144mHz. We can start with "BLUETOOTH" and rattle on a litany of other commercial world programs that covet our spectrum.

1.2gHz, 2.4gHz and 5gHz are under very close scrutiny for this act.

Or which one of two dozen trade periodicals would you care to dispute on this, Lennie?

"TV Technology"...? "Electronic Design"...? "EE Times"...?

I don't need a degree in engineering to understand "....we are seeking access to (enter band of choice here) to further expand the capabilities and improve the flexiblity of (enter pet project here).

>Let the world know so that the black helicopters may be properly fueled.

You ARE an idiot. Flaming, rip-roaring, stupid-as-the-day-is-long idiot.

>>Yes, it does. It sez (sic) that I have a complete and insightful
>>understanding of the present situation in the ARS.

>In your opinion anyway.

Let's put it to the test. Larry, what it the complete and insightful present situation in the ARS wrt the following topics:

Ultrawideband
Spread spectrum
Digital voice
Home Phone Networking
Synthetic aperture radar
Periodic emitters

Just to pick a few that I know well enough to be able to judge your response.

IMHO, anyone who thinks he has a complete and insightful understanding of all of the issues surrounding Amateur Radio is egomaniacal beyond belief. I realize you think you are superior, Larry, but you really should draw the line somewhere.

It appears that you are now agreeing with Cecil that Amateur Radio does not need to have a strong technical component.

You are full of surprises, Dick.

>Bounties and rewards sounds like a vigilante operation to me.

The FBI's "Ten Most Wanted" list is a vigilante operation?

The reward offered in the wake of the OKC bombing was a vigilante operation?

Of course, since I have my suspicions about you anyway, I BET that "bounties" make you nervous, Lennie, and probably with good reason.

>The word "amateur" in amateur radio refers to non-pecuniary
>interest in radio activities.

That pertains to compensation received for OPERATING a radio station for hire. Not that you needed to have that told to you. And ANYONE can participate in "radio activites" FOR PECUNIARY INTEREST with or without a license, as long as it does not involve operating a transmitter or divulging information contrary to The Communications Act of 1934 as ammended.

>What happens when the wrong person is accused due to bad
>evidence?

"Rewards" are paid "for the arrest AND CONVICTION OF" the alleged culprit. In otehr words AFTER the bonafide judicial system has determined that the person(s) alleged to ahve commited the offense did indeed do it.

Lot's of people are, unfortunately, prosecuted "due to bad evidence", and HOPEFULLY the "system" will see through it and "justice be done".

Do the wrong people get convicted? Sure, sometimes. But statistically that number is VERY small.

"An America Not Prepared For War In Peacetime Will Not Know Peace In Any Time."

Screw China. Feed 'em fish heads.

NCI (which by the way is a registered trademark of the National Cancer
Institute) is opposed to the allocations of the CW sub-bands on all HF
frequencies..as stated many times by Direktor Stevenson. This equates to
opposition to code. Waffle all you want, but eliminate these protected
areas and you eliminate code and digital modes as the SSB hordes will
descend upon them faster than Gengis did on China

>>requirements for Extra until they were virtually eliminated, so he is
>>compelled to 'prove' that they were never proper in the first place.

>There you go again, Dick...telling the TRUTH!

It looks more like an opinion to me, Larry. On what basis is there any "truth"
to Dick's surmising about the reasons for Cecil's current code-testing stance?
In a legal sense, truth is proven via evidence. What is the evidence that Dick

is using to fathom what Cecil's reasons are?

I suppose it is easy to believe you have won any arguement when you can pronounce what you say as truth and can pronounce the motivations and thoughts of those who say differently.

One lone voice in a screaming crowd of 1000's is seldom heard - Confucis

CW gets through when Condx are less than favorable. Today's modern DX'er (read post realignment) feels the need for stacked bleams and mega watts of amplitudinal power to make themselves be heard on SSB. Couple that with their total lack of operating skills, I doubt even an avowed QRP'er like yourself would ever make a contact in some of today's mega pile-ups.

Here's a test Ed. When the next big dx-pedition is on the air. Try working your qrp signal against the SSB boys. Betcha a nice lobster dinner at Ruths Crist you never make it through. Betcha 2 dinners, you're never even heard :-o

He means all a ham needs to know is how to build and operate a QRP kit. :-)

He was not unwilling, Larry, he was unable. He spent thousands of hours practicing Morse code and could never get past 10wpm. Getting to 13wpm was his top priority and had a negative effect on his life and physical health. What is it about a biological handicap that you absolutely refuse to understand?

The terms "met in person" and "being at a gatehring(sic)" are not equivalent. I have been at a gathering where Duante Culpepper was also present, but I have never met the man.

Good luck on this one now.

When Dick talks about giving up the farm, he's obviously talking about
the Morse code testing farm.

In article <MPG.1549e7f0c898d5aa9896dc@news.earthlink.net>, funguy@hotjuno.com says...

> Waffle all you want, but eliminate these protected areas and you eliminate code and digital modes as the SSB hordes will descend upon them faster than Gengis did on China.

This "protection" exists in the regulations of only a small number of countries worldwide. The vast majority the ITU signatory countries do not divide the amateur bands up be mode, yet we do not see "hordes" of Canadian or Japanese or Chinese SSB signals descending on the CW end of any band.

Even in the US, 160 meters has no such "protection", yet SSB, CW, and even AM stations seem to coexist just fine on that band.

Waffle all you want, but the evidence disproves your "the sky will fall on CW" jeremiad.

>knowledge" which you can then share with them to
>convince them to leave the test alone?

Bill:

This is a legitimate question, and I'm going to give it the truthful answer it deserves. I cannot personally impart "first-hand knowledge" of the value of the Morse/CW mode upon prospective hams -- they must gain this knowledge on their own. I can always make the attempt to relate my experiences, but that, from their point of view, is merely anecdotal evidence of facts they have yet to determine for themselves to be true. In the absence of the requirement to be tested for CW proficiency at a useful level which would encourage continued on-the-air use of the mode, the problem becomes one of motivating an individual to gain this skill.

With the incentive of higher operating privileges already given away for free, there no longer exists any reason for becoming a proficient CW operator. The mere words of CW esthusiasts like myself may not necessarily inspire people who are motivated by amateur radio activities which provide more readily attainable gratification. I can always try, of course, but to be perfectly honest, I am not really interested in "recruiting" CW operators. I would prefer to see them come about through a process which I feel develops internal motivation to learn and gain proficiency in the mode. I believe in incentives -- they work virtually every time they're tried. I believe in the testing requirement -- it worked for me and for millions of hams before me.

Precisely. Everything I state in this newsgroup is MY opinion. I also know for an absolute fact that MY opinions are shared with a great number of my fellow hams, in and out of this newsgroup. I am not put off by the fact that there are people out there who disagree with me. At least, not as much as you and a lot of the no-code test supporters seem to be. Why is that?

It's called the "gentleman's agreement" No one has to follow it, but
they do out of courtesy to each other, however, less and less. More and
more you hear the New Hams, who should have listened listened listened
first, just fire up and yak away and then complain out some clicking

noises they hear. If chastised, they get indignant.

>
> Waffle all you want, but the evidence disproves
> your "the sky will fall on CW" jeremiad.

> 73, de Hans, K0HB

However, the original premise was that NCI is actively seeking to
eliminate CW by virtue of Carl Stevenson's comments and teachings to the
other sheep...members.

Sucks to be me I guess

Who cares, we have nothing to do with the medical industry.

>(NCI) is opposed to the allocations of the CW sub-bands on all HF
>frequencies..as stated many times by Direktor Stevenson.

NCI has taken NO stance on sub-bands.
The personal opinion of one NCI director does NOT make
it NCI policy. There are many people that oppose subbands who
care not a twit about use of any one mode.

>This equates to
>opposition to code. Waffle all you want, but eliminate these protected
>areas and you eliminate code and digital modes as the SSB hordes will

Indeed, as have the rantings of others. However that need not be the case in the furure.

>The FCC has the responsibility for enforcement.

Just as your local PD or Sheriff has the responsibility for law enforcement in your town...however they too depend on the support and cooperation of the persons in the community. Just as WE should be helping (and encouraging) the FCC to go after these ner'-do-wells.

K1TTT has a neat idea. He's got a bounty out on anyone caught bootlegging on 10 meters. I promised to pony up $50 for the kitty if he gets a taker.

>Does it do any good to report lawbreakers to the FCC?

Do I detect an air of apathy? The same apathy that sees local crimes occur but left unreported "cuz it's the cops job"...???

>Is the FCC more likely to respond
>to a lawbreaker within a ham band than a lawbreaker outside a ham
>band?

They have been pretty righteous about getting the pirates at 6955kHz. I bet with a bit more information to go on they will bust others too. Make the local CB scofflaw the next target of a t-hunt, then get the "participants" to submit what they fiond to the FCC.

No...no vigilanteeism, no knocking on doors...just find 'em and rat them out.

>Can a system be set up at the ARRL to screen and funnel violation
>problems to the FCC?

Already exists. Too bad it doesn't get used more often.

73

In what part of the EM spectrum has the FCC "sold amateur frequencies
to the highest bidder?"  Bidding indicates auction.  Is there an auction
planned or posted by the FCC?  This is merely a question.

My father died of natural causes in July, 1975.

Not from any "cowardice."

> I am sure the black arm bands will go well with your brown Hilter
>youth outfit.

Poor attempt at an insult. What next, some attempt at insulting my late mother?

Why are you concentrating on personal attacks of others who object to your initial insults?

>The 23rd is when I plan on flying in.
>
>> Do you need directions?
>
>Nope, I already have your address and phone number. I'll call you when I

No need. Unwelcome telephone calls are treated with the same courtesy afforded to telemarketers. None.

>Bank on it ;-)

No. The above anonymous intimidation was a poor attempt at "message poker" which didn't win any "pot." There was no "game" in progress except in the minds of a few furious individuals who cannot communicate through the written word other than scribbling insults as "replies."

Intimidation, overt or implied, only works on those who are able to be intimidated. I am not intimidated, only annoyed with the anonymous idiots who continue to act like they are still schoolchildren.

Untrue. Unlawful conduct is everyone's concern.

This includes unlawful amateur radio activities.

What I stated under another thread was that standards and
practices and procedures of amateur radio are not the example
for citizens band radio nor the other way around.

The civil radio regulatory body in the USA is the Federal Communications Commission. The FCC is open to suggestions, comments, information, and evidence of radio wrongdoing.

The keyword is evidence. Evidence is not personal opinion. Evidence is factual information of unlawful radio activity...in any radio service. Such evidence can be recordings that include dates and times of unlawful operation, frequencies, transmissions. Such evidence can be supported by approximate bearings from an observer's geographic location. Directional antennas are well-known in radio literature.

The alternative to citizens contacting their government on unlawful radio operation is vigilanteeism, itself against the law. Vigilanteeism is a two-way street, not a good thing to consider against another radio service when outnumbered at least ten to one. Vigilanteeism is wrong.

One they cannot do is talk to law-abiding hams, at least not for long.
Ask them how they talk to their ham friends.

It's not apathy, Steve, maybe it's reality. The local cop is my younger
cousin whom I smacked up aside the head with a 2x4 regularly in our younger
days. The FCC is not my cousin if you get my drift.

So .... You found the site, so refer it to the FCC for action. Send the URL to Riley.

Gee what's a matter Leona? Is is getting to her that she isn't the only
one who can toss out the "compliments"? And these aren't personal
attacks mind you, these are factual observations based on reading your
posts. Whas a matter.....is it getting too hot in the kitchen for the
poor baby?? HA HA HA Or perhaps, we're hitting a nerve..actually
exposing her to what she really is? hhmmmmmm

That's OK. Then I've accomplished everything I set out to do. Show you
for the little weaselly nazi loving stooge that you are. I think we've
chatted enough. So until the fact to face, or in your case face to 2
faced (yours of course) Try not to wet your depends when the phone rings
or someone knocks on the door.

>>Lennie the Lame has made a point (as have several others) that the
>>shennanigans of some CB radio operators are not "any of Amatuer Radio's
>>business".

>Untrue. Unlawful conduct is everyone's concern.

You have, on numerous occassions, stated that Amateur Radio operators should not be concerned with the activities of NON hams.

That you may have said something to the contrary in one thread means nothing. You changes faces so quickly as to be untrustworthy and contradictable.

>What I stated under another thread was that standards and
>practices and procedures of amateur radio are not the example
>for citizens band radio nor the other way around.

No one was addressing radio technique or practice. We were discussing illegal activities.

Please pay attention if you are going to comment here.

>The civil radio regulatory body in the USA is the Federal
>Communications Commission. The FCC is open to
>suggestions, comments, information, and evidence of
>radio wrongdoing.

That's waht I said. No vigilanteeism's...just report what you know. Thanks for reiterating the obvious.

>The keyword is evidence. Evidence is not personal opinion.

Again, I stated that clearly. Obtain information and relay it to the authorities. Why do you seem to have a problem with that, Lennie...???

>Such evidence can be supported by
>approximate bearings from an observer's geographic location.
>Directional antennas are well-known in radio literature.

No kidding, Lennie? I didn't know that. I believe that I stated that using a "bandit" as a foxhunting target and then reporting that information to the FCC would be a proper course of action. I SPECIFICALLY said "no door knocks". Just find 'em and report 'em.

>Vigilanteeism is wrong.

I believe I said exactly that, too.

The point is, the discussion was in regard to 'justifying' amateur
allocations. If the FCC were to change its stance and decide that the

allocations were no longer 'justified', the amateur spectrum would presumably be reallocated. In the past few years a prevalent means for allocating frequencies has been by auction. Unlike other bidding processes, things being sold at auction go to the highest bidder rather than to the lowest bidder. Leo is apparently unfamiliar with such concepts.

> Ask them how they talk to their ham friends.

That's a nice question. I gave some thought to it a while back and there is a way, sort of. Each issue of QST has a rather large list of SK's published. All one would need to do is find an issue about 5 to 6 years old or more, then look for a SK listing whose call sign is in the same district where they live. This needs to be done to reduce the chance that somebody will notice the antenna is pointed the wrong way when they talk to them. A simple check on QRZ or Buckmaster will revel if the license is still cataloged as being "good", not expired, and what class it is, and what name to use on the air if it is looked up. The reason for picking from an old listing is to reduce the chance that somebody will "remember" working somebody with that particular call sign. Of course it is not fool proof, the spoofed call may have belonged to a well known and very active operator, or the other party knows the ham whose call it is is a SK! The other problem would be QSL cards too. I think if somebody plays their cards right they can get away with this for a good while.

In article <3ADF20E5.752F@bellsouth.net>, Jerry Oxendine
<joxendi@bellsouth.net> writes:

>Len, DAMN IT!

Profanity will not make your point in this newsgroup (there are too many in here of victorian tastes who think that is smut).

>It takes two to tangle, and your argument with "funguy" et al, has
>nothing to DO with ham radio at all.

A lot of wasted bandwidth concerning Steven Spielberg and the
Boy Scouts isn't about ham radio.

A lot of discussion on Marine Radio isn't about ham radio at all.

A heap of abuse piled on CB might be justified
because the FCC stole the wholly-owned and operated
11 meter band from US radio amateurs 42 years ago.

Oxendine has posted to all of those threads...and a couple of
others which have nothing directly to do with amateur radio.

>therefore, ALL Democrats are MAD!

Political parties and their faults/goodies have little to do with
amateur radio...despite an extraordinary amount of political
party talk going on in this newsgroup after the General
Election. That isn't ham radio stuff either.

>Even if the subject being argued is
>ham radio, it is an INDIVIDUAL argument between 2 or three people.

That is the norm for 99+ messages in here.

>The
>extraneous responses you get from some others is the result of their
>being denigrated by association--just like mine now.

Oxendine posts an extraneous response and somehow I have
"denigrated him?" Is this through some time-space warping
capability, including telepathy, that is granted under an amateur
radio license?

>Why can't you AND funguy just let it GO!!?

"Let go what?" It is difficult to hold onto something that doesn't
exist...such as self-professed ace holes, excuse me, ace haoles
of WW2 fighting skies who demand and expect physical
confrontations.

...now why must there continue to be a morse code test for
amateur radio licences other than ITU-R S25.5?

Forgive me, morse code testing may not be about amateur
radio? Inform the civilians who know nothing about nothing
because they aren't licensed in the amateur radio service.

For the same reason he has been cajoling Amateurs in this forum for years now. He has nothing else to do except elevate himself on a self-carved pedestal. It's truly pathetic.

And trust me, he KNOWS exactly the nature of this forum. He will once ridicule someone who uses the "it's USENET, not Amateur Radio" arguement when HE does not feel that the persons behaviour fits "The Amatuer's Code", but then he will himself launch into tirades and bursts of profanity, immediately humiliating himself and anyone else in his profession.

Just relax, Jerry. Lennie isn't about to follow his own "rules", so might as well sit back and enjoy the fracas.

Commenting is probably futile, Jim, since Lennie has since edited out your original comments and the context in which it was made.

Easier to defend a lame argument that way. I understood your comments,
and I didn't spend 14 years in night school to do it!

Oh, I see, it's not that the law is based on religion that is the
problem, it's that it inconveniences you.

Why, then, did you attack all laws which "assume the existence of a
God"?

Make up your mind.

BTW, if you can't wait 5 minutes before you start you Sunday drunk, then
perhaps you have a problem.

Obviously they don't know too many teenagers.  "How GAY!" is still used
a condemnation (as it has been since I was in my teens).

He is incapable of copying Morse code faster than 10wpm and has been diagnosed with a biologically based AADD. It seems to me to be akin to interrupt latency on a computer. He is an electronic genius, had no trouble with the theory exams, and was one of the first to upgrade using a code waiver. He is so knowledgeable of ham radio and radio in general that it blew my mind when I first found out he was a Technician since the 1950's. His experience changed my mind about Morse code testing.

If you can find the word "all" in my posting, I'll give you $100.
Please ask your God to forgive your attempt at mind fornication.
Some laws based on religion are rational and logical. A law against
buying a beer at 11:45 on Sunday morning is not one of them.

> BTW, if you can't wait 5 minutes before you start you Sunday drunk, then
> perhaps you have a problem.

I've got better things to do than hang out at the Taylor, TX 7-11.

> You have no more way of knowing that there is no God than those folks
> that there was no such thing as radio.

One cannot prove a negative. On the subject of God, one cannot even prove
a positive. I cannot afford to believe in things for which there is no
evidence. If I told you to have faith that a bunch of gods live under
the surface of the moon, would you buy it? If not, why not?

If they are so good at putting out fires and making examples, why has an unlicensed FM station operated with impunity at their door step for the last two years?
Actually, I know the answer but would love to see your answer.........Cajun

What laws are those, Cecil? I see laws based on common sense (murder, etc), laws based on accepted community standards (marriage, drugs, etc), and laws based on adopted standards (trade, business, etc), but I see no laws based on an assumption of the existence of a god.

> It doesn't disprove the existence
> of a God. It just makes God unnecessary.
> Homo Sapiens are not special at all.

Well, you're certainly free to view yourself that way, Cecil, but I hope you'll pardon me if I continue to view myself, and other human beings, as somewhat special.

Please show evidence of "bursts of profanity."   :-)

It is not possible to "know exactly the nature of this forum." This
forum is about amateur radio policy. Those not licensed in the
amateur service "know nothing" about amateur radio (repeated
quote from the quoted individual) therefore cannot "know exactly"
anything about this forum. :-)

>presumably be reallocated.

In that hypothetical future, unjustified allocations would more likely result in cancellation of the particular radio service.

>In the past few years a prevalent means for
>allocating frequencies has been by auction.

Untrue. Auctions have been used by the FCC to select a service provider, national or regional, for a particular radio service in frequency bands already selected and offered by the FCC.

The FCC explains this in the "FCC Handbook."

>Unlike other bidding
>processes, things being sold at auction go to the highest bidder rather
>than to the lowest bidder.

What other auctions sell to the "lowest bidder?!?"   :-)

What particular amateur radio bands are now under consideration, or even hinted at being under consideration for reallocation? Let the world know so that the black helicopters may be properly fueled.

Those blue laws are based on community standards, Cecil. Your community obviously has a good number of people who, for whatever reason (religion, or they just don't like drunks), don't want people to buy beer on Sunday. If those laws were truly based solely on religion, there would be no beer sales at all (any day of the week).

Hey, you started this, Cecil. Why don't you offer objective evidence that a supernatural realm does not exist? Sorry, your claim that it doesn't exist is opinion, not objective evidence.

>
>What can we do?

1) Tape-record the intruder's transmissions
2) Send the tape and a letter detailing the intruder transmissions to the FCC. Include date, time, frequency, signal strength, bean heading (if directional antenna used), and any toher pertinent info you can think to include. Send them to Riley Hollingsworth.

Cassette tapes are the preferred medium. Reports alone won't do it - the FCC wants tapes of the actual transmissions.

DON'T make contact with the intruders, or try to deliberately interfere with them.

No, it's just a question. I wanted your opinion. I'm still trying to figure out what you answer is supposed to mean. Please explain.

>If all that was wanted was an opinion,
>such could have been asked in private mail.

Why? The only reason I can see to move a discussion from a public forum to a private email is because one or both parties want the discussion to be private, for some reason. I saw no reason to for that. In addition, many people consider uninvited email to be "spam" - that is, unwelcome.

>classes.

That latter part is correct.

>Some radio amateurs have complained bitterly
>about the "theft" of their beloved, wholly-owned, ordained

>by God spectrum space on HF...for 42 years.

A few, sure. Not me.

US hams got the shared "11 meter" band immediately after WW2. It was added for a variety of reasons, the most obvious of which was cto compensate for the loss of 160 meters to LORAN. But in the years following WW2, hams got an exclusive 450 kHz band at 15 meters, and regained use of 160 meters a little at a time. The reallocation of 11 meters to other services was not a major loss.
>
>This newsgroup is titled as being for AMATEUR RADIO
>policy. Citizens Band Radio Service is not classified by
>the FCC as amateur radio, has its own Part within Title
>47 CFR (95).

True. But that is not the whole story. Actions by users of the CB service have had negative impacts upon amateur radio. For example:

- Hams are often blamed for RFI situations caused by CB users.
- The public often confuses the two services.
- Some CB users operate outside their assigned channels. Some of them even operate in the amateur bands.
- Amateur radio equipment has to meet certain FCC type-acceptance rules, not because of misuse by hams, but because of misuse by CB users.
- There was a concerted attempt in the mid 1970s by the EIA to get the FCC to reallocate the 220-225 MHz amateur band to a new "Class E" CB service. (This effort was, fortunately, defeated).

>>>>Would you hold up the Citizens Band Radio Service, as it exists today, as

>of a million users per channel.

Sure - but that's hardly a reasonable scenario, for many reasons. For example, many of those 10 million sets are no longer in use.
>

>The above is an exaggeration, of course. Not everyone is on the

>will object to that since they exaggerate ten to twenty to thirty
>ham stations vying for a rare DX attention as "thousands"]

Not at all, Len. The two scenarios are quite different.
>
>Is there any wonder that a few CB enthusiasts go beyond
>allocations into freebanding?

Yes, it's a wonder. CB operation is supposed to be done with low-power equipment, and limited to local operation.

>That's no excuse for illegal

>
>You are welcome. It would be prudent to remember an old
>saying about "asking for what you want...you may get it."
>
>CB was created by the FCC 42 years ago.

Actually, 53 years ago, 1948. That was UHF, but it was CB.

>The 40 meter band
>allocation changes began at WARC-79, 22 years ago. That
>40 m issue HAS NOT BEEN SETTLED IN 22 YEARS' TIME.

The issue of 40 meters is a lot older than that. It goes back to at least 1947.

>
>The ARRL does not represent CB radio (see subject thread
>header of "Can we sue the ARRL? Yes we can.").

Nobody I know of says the ARRL represents CB, or that it should do so. What's the problem?

> It represents
>US amateur radio (by their own claims).

All hams benefit by what the ARRL does.

>Both the ARRL and
>IARU keep talking about the 40 m issue, yet nothing but talk
>has been done yet to settle it. 22 years of such talk.

What would you have them do? Have you ANY idea of what the actual issues are, in the 40 meter question? Have YOU ever dealt with those issues?

> It would
>seem prudent to concentrate on amateur radio matters such as
>that rather than yet-another-castigation of CB radio.

When another radio service has an effect on amateur radio, that's a policy question that deserves attention.

Do you know why hams cannot buy external RF power amplifiers that work on the 10 or 12 meter amateur bands without modification? Do you know why they cannot build more than one amplifier of a given design for those bands per year?

>
>The 40 m issue does not concern me.

I am not surprised.

>Have a blast with it.
>
40 meters is my favorite band. I enjoy it very much. Hopefully, there will be even more to enjoy soon.

N2EY

Yes, and it has also far outdistanced the ability of *anyone* to keep abreast of all its various and widely divergent branches and variants. But ham radio is not all that far reaching in its basic objective and means- to communicate by radio, using whatever means is at our disposal.

Leland and all,

OK, I have spent the better part of 3 hours composing a detailed letter to my Representatives explaining the problem, and asking that funding be restored to FCC to deal with this illegal activity. I, for one, am angry over these unlawful intrusions onto the Amateur Bands, and the activities of others on other HF bands. I had to edit the letter down to 3 pages! LOL!

This may be futile. The Reps *might* ignore my letter, or feel that it is not important enough to warrant attention. Again, maybe not. To me, it beats sitting around just "gumming" the issue to death. This is our most useful weapon. We, as a group, can't just go out and start pinning up coax, or slapping the snot out of outlaws, but we CAN write enough letters to get the issue noticed. My letters will go out tomorrow, not only to my own Reps, but to Mssrs. Feingold and Ehlers as well since they are responsible for the local enforcement bill, and will be somewhat aware of the issue. True, I am not one of their constituents, but this is something that affects ALL of us as users of radio--some of us as users of other forms of utility comms besides Ham.

So. Who's joining me with YOUR letters?

73

Would I redeem myself if I said I feel sorry for him? How he must have
yearned all those long years to be liked by the other hams, and be
allowed to play reindeer games.

No.  Only you would think of saying something that ridiculous.

But, but, you said you wanted to keep the code test, and score it in
with the written test. Why would you say you want to keep a test that
you also say has no rational need to be? That's quite a dichotomy
you're dealing with there.

For your clarification, then...
I oppose the code test as a separate pass/fail exam.
I have no problem with adding a couple of questions to
the theory syllabus relating to code as a mode. That would
put the code on an equal footing (as a mode) with all
others.

Cheers,
Bill K2UNK

That doesn't sound like the same thing as scoring the code test in with
the written test.  Have you backed away from that now?

If you are talking about integrating the 10 questions
of a morse test with the other written tests, you are
correct in that I see no reason to support that any more.
It was a hypothetical that showed how locked in the
code requirement mindset was.  The reality is that
it never was going to happen.  Had it actually gone forward,
I'd have supported it for the interim.  Now there is
absolutely no need to do so.  Times change, positions
change.

Cheers,
Bill K2UNK

When having nothing rational to say, you resort to sillyness? He was more
intelligent than I. He was better educated than I. He was more experienced
than I. He was more knowledgeable than I. The single advantage I had over
him was that I was biologically capable of 13wpm and he wasn't. It was/is
a biological condition beyond his control just like skin color or sex.
Walk a mile in his shoes and then get back to us.

I got the idea from Dick. I promise you that I am totally not responsible.
I absolutely hate responsibility and have promised myself never again to
be responsible.

Actually, what it was was the most defensible solution to the code test issue.

Jeez, that seemed painful for you.

My recollection is that you did more than just support the idea, though. Weren't you the one who actually proposed it?

Okay, alright already. I don't feel sorry for him anymore.

> Walk a mile in his shoes and then get back to us.

What size does he wear? I can't fit into anything much smaller than a
12.
Maybe I could just wear his hat instead.

Wrong.

Adolescents must be protected from those who would exploit their
interest in sexuality. I have no problem with the idea of homosexual
males being on GIRL Scout overnights, I have a real problem with

heterosexual males being there.

If you don't see the risk of having homosexuals leading troops on
campouts, then you are broken.

If you had meant something less than all, it is contingent on you
(making the assertion) to specify a subgroup.

I went round and round on this one with both Carl and Bill. They came around
to my way of thinking and now both agree that what I post is my personal
opinion, unless obviously otherwise from statement or context.

Restating my words to make them say something that they did not is a pretty odd
thing to do, Larry. Why did you do it?

Folks

I have a "tech-plus" (technician plus 5wpm code) license that I received
in 1991 that is up for renewal in July. With the new fcc rules, what
class would that be renewed to and/or would any additonal testing be
needed? Thanks.

In article <3AE0DC6D.195CE3D1@charter.net>, Warren Trimble says...

>I have a "tech-plus" (technician plus 5wpm code) license that I received
>in 1991 that is up for renewal in July. With the new fcc rules, what
>class would that be renewed to and/or would any additonal testing be
>needed? Thanks.

It would renew as a "Technician" license with 5WPM, thus eligible
for the same priveleges you have now. ("Novice" HF privs plus
everything above 30MHz)

With one additional written exam you could upgrade to General.

With still another written exam you could upgrade to Extra.

73, Hans, K0HB

Please.  They both realized that they had set standards that they were
being judged by.  After trying to weasel out of holding themselves to the
same standard they set, the NCI board MADE them concede.  This way they
could go about bad mouthing everything around them that didn't agree to
follow the rest of the group.  Archives show that Carl hated everything
about the ARS, especially the ARRL.

BTW..after all his posturing about the elimination of the code..or the
reduction and all the great things he could do but couldn't/wouldn't, it
strikes me as funny that he never used his get of jail free card and bag
that Extra license.  HHHmmmmm

What kind of nonsense is all that?? Of course I don't build my own vacuum tubes nor caps and resistors, but I have a lifetime supply, probably 6K tubes, along with a lot of transistors and IC's and scads of other hard to find parts. So what? Do you build your own pickup trucks? Why are you trying to gete stupid on us?
If you believe that ham radio and CB are one and the same,why not just come right out and say so instead of all this dancing around the subject?

Maybe Bruce was right-- "No CW, it's just CB". Why don't you just overtly acknowledge it instead of trying so hard to ease us into the idea?

MOrse didn't invent the code that bears his name, either, ALfred Vail
did. Morse was klutzing aroiund with using numbers for words, and was
really upset when he saw what Vail had done to so seriously upstage him.

>

Makes a good story. May even have a grain of truth in it. If so, power
to him, at least he had what it took to get radio off the ground. Others
who came before didn't get it done.

Mahybe YOU don't. That doesn't mean others are of the same mind, whatever they say for publication.

Some
> of us simply want radiotelegraphy to stand on its own merits and not
> be artificially propped up by a governmental affirmative action program.

Which is tantamount to it's demise. When no one is required to learn it, it is gone,gone,gone in less than a generation.

Why do I really believe that is a huge mistake? From another venue:

"A book with the simple title "Complexity" says that all self-adaptive systems (including us) grow in complexity until we reach the edge of chaos, where being competent is defeated by random events beyond our ability to predict or control."

I have seen too many failures of high technology to believe that it is the total answer to all human needs. It only gets worse with added complexity. When will the lockup occur? Do YOU know?

I'd like a shot at these:

>
> Ultrawideband

Unless you're referring to SS we don't have any wideband, by regulation.

> Spread spectrum

Useful in many venues. I have a cordless telephone which works great. As for ham radio, it is clear where we are with it - nowhere. We can't begin to agree on what the consequences of use of SS are on HF, and it'll be years before that question is adequately addressed.

> Digital voice

Same as above. In ham radio we don't have any, and it doesn't appear

likely we will in the foreeable future. What would be the point?
Ham radio responds to two stimula:
1). developements which solve a need, such as development of SSB which did indeed solve the horrendous band congestion of the late years of the AM days. Anyone who experienced the wall-to-wall heterodynes of 75 and 20 meters in the 50's-60's knows.

2.) New developments which are attractive from an operational point of view, including efficient use of bandspace and power. PACGTOR and PSK31 are two notables. I know that engineers and theorists see great things for digital voice. I have serious reservations that the ham radio populace will agree that the massive convesions needed will be in their best interests given that there is presently no imperitive need. I know that time and proofs of some of the finer benefits will slowly persuade hams that there may be reasons to go digital voice, but I believe that will take longer than the conversion from AM to SSB. The glarin gneed is just not there.

> Home Phone Networking

QRM, QRM, QRM. Sanctioned by our very own FCC. I yelled as loud about that when it was in the NPRM stage as anything I've ever yelled about, both to FCCand my congressman. I imagtine many others did, too. To no avail, as is clear.

> Synthetic aperture radar

Not familar with this one.

A long-experienced Extra class ham is not a superior performer to the many beginners in ham radio? What is this, becoming a Communist hobby/League? No body said "better" or "exclusive". Despite all your verbiage in criticism, the newcomers know...

Hey, we're paying you to be the expert, Ed, and to handle such stuff for us. If no new hams need to be even minimally technically competent what's your problem?
I know of no better reason to pay my membership dues than to hire you and others to keep ham radio afloat, If you guys can't get it done, well, either we'll have to find someone better at it or give it up.

And again, you have done very well at holding down your end of things. I still think that Newington could have done a lot better job of liason with the FCC in the past couple decades. They need to know us on a first name basis, and that first name should not be Squiggy.

> This "protection" exists in the regulations of only a small number of countries worldwide. The vast majority the ITU signatory countries do not divide the amateur bands up be mode, yet we do not see "hordes" of Canadian or Japanese or Chinese SSB signals descending on the CW end of any band.

You don't see "hordes" of hams of any type there. But don't tell me that we don't experience QRM from Canadian SSB stations in the US CW bands. Maybe you're a little close to them, I am not. Imagfine what THEY would experience if every US ratchetjaw with a bloated KW could do SSB down there. They might as well toss in the towel, right along with ALL low powered CW. I rarely ever use an amplifier these days, but I can assure you, it'd be KW day every day on CW if I had to compete with the smug SSBers all the way down.

The subbands were put inplace initially for a very good reason, a reason which still exists. To change that would introduce chaos unknown heretofore.

>
> Even in the US, 160 meters has no such "protection", yet SSB, CW, and even AM stations seem to coexist just fine on that band.

Yeah- the hndful of hams who can get enough antenna to radiate a useful signal on the band. We gripe about CCCR's and the severe antenna restrictioins they cause, and we work around them. But not effectively on 160 meters.

>
> Waffle all you want, but the evidence disproves your "the sky will fall on CW" jeremiad.

If that's what you use for evidence the trial is certain to be a flop.

Your Technical Plus license will be renewed as Technician, and it is general believed that you will retain your current Technician Plus HF privileges. You must save all of your old FCC licenses and VEC CSCEs to insure you have proof of passing the 5 wpm code exam.

You are not required to take any additional exams. However, I would recommend that you take the Element 3 written test (35 questions) as soon as possible, which will advance you General class licensee.

And, if the Boy Scouts didn't have this policy, and one of the boys were molested, there would be multi-million dollar lawsuits involved. Look at the pile of lawsuits directed at the Catholic Church after several "gay" church leaders molested some boys. What other choice does the Boy Scouts have? In my opinion, this policy is an absolute necessity.

Yup, not a bad idea at all. Bury 'em under a pile of tapes & letters. The last thing the FCC wants is pointed questions from Congressmen about anything and a heap of tapes oughta generate some of those questions.
>

Which of course the FCC would dump right back on the Congresscritters
for not having enforcement monies. But somebody gotta make a stink out
of it to get the ball rolling or nothing will happen again.
>
As far as hams really getting the goods on the sumbitches is concerned
hams can't DF 'em with tribanders and tapes are all stale
privately-gathered post-facto evidence. Would not carry much if any
weight in legal proceedings.
>
On the other hand the FCC monitoring stations have very sophisticated
DFing capablities, they can nail a transmitter location within a block
or two from a half continent away in real time. We need an 800 number
hotline to the monitoring stations so that we can put the FCC directly
on 'em in the act. Or maybe a pasword-protected instant messaging
link.

Read your sentence again, Cecil. You said the "set of laws" you are "forced to live under." There is only one Blue Law that you live under - the one in your county or town. So where are the plural "set of laws?" ;-)

> > So what belief of mine are you going to

You have an inalienable right to buy alcohol on Sunday? Lets not get carried away, Cecil. More importantly, lets not reduce inalienable rights to trivial matters like alcohol consumption.

Why sure Jerry,

I'll be quite honest though. I'll "rat" out anybody whose illegal operation interferes with my (read our) legal operation. That merely means that I basically take a similar stance to the FCC's "apparant position; You need to attract my attention first. I will NOT be sitting around monitoring the freeband and keeping a log, etc. An errant freebander needs to slip the noose around his own neck. Please don't tell me that they do that by just operating in the freeband, there are many low power stations that we will never hear unless we go looking for them. Quite frankly, I've got better things to do ON the amateur bands rather than OFF on 11 meters.

I have done, do now, and will continue to take a very proactive stance against those who encroach upon our 10 and 12 meter bands. No, I don't lump them all into the same basket. The trucker running a 500 watt amp transmitting on channel 19, "2 up" in the 10 meter ham band greatly concerns me. The guy running 25 watts into a 3 element yagi with good RF grounding who works some DX in the freeband does not. (Besides, that's the guy who'll eventually move up to bigger and better things and get his ticket.) Some might disagree with me and that's ok, that's what makes the world go around. As for letters to my local and congressional representatives, I'm way ahead of you...on a variety of RF related matters.

It's probably more than double that, but think of what your city or county pays experts to testify in criminal proceedings. While these would most likely be misdemeanor offences, a typical community would only need a few high-profile cases and the rest would back off.

No, although I was DL4RQ for a couple years in the early 60's. Things are sure different on the bands when you leave our shores. I even find it radically different on the bands when on the West coast than here in the center of the country. Probably because there, on one side is nothing but water, with all the ham activity to the East instead of on all sides as here. You may experience some of that from near the south border.

I can tell you that nowhere on the planet exists active hams running higher power in the numbers found in the USA, and for sure not the independent minded individuals. As Larry said, in most other countries most everyone does what they are told, including hams. Here? Well,....

The sheer numbers alone would soon close down all but QRO CW in the event FCC abolished all band mode segments. Since there are far fewer CW ops running high power than SSB ops, the end result is obvious. Many, if not most CW ops would just toss in the towel before long, and quit ham radio. There are many who are on the edge of it now. I know several who have been inactive for years but keep their tickets.

That's true, the Supreme Court ruled in1856 that the police are not responsoble for protecting individuals, rather society as a whole. Got that, gun bashers?

> I assume the same principle applies to the FCC.

No, FCC has been sued *by ARRL* a few times. Last time I dropped my membership it was because they sued FCC over something I considered to be far less important than the ill will the lawsuit was certain to generate at FCC HQ.

They don't like busting hookers, bums or public drunks either, but when the influential folks about town raise a stink, they're out there on-the-double. When a small aircraft misses the runway at the county airport and crashes into a school and someone speculates that 4th or 5th harmonic radiation from a "Texas Star" 6.4 kW (non) linear may have taken out the navigation system, then you'll see more interest in the regulations.

Actually, Phil, effective regulations are already on the books, as you know. Typical Use-Permit regulations will allow antennas under imposed resitrictions, but those restrictions generally require FCC authorization as a minimum condition. I know that's true with both the Sonoma County and Petaluma city regulations. Exisiting Planning and Land Use regulations could at least require the removal of the antenna. That area of law is "well settled".

I think the FCC is already doing the stings. I read a few months ago about
one in Washington or Oregon where some mom 'n' pop CB shop got popped
several thousand bucks.

That's not pressure. Walking into Rep. Snarf's field office and having a face-to-face with his field rep and explaining in a professional manner why the problem came to exist and how it can be fixed is a bare-minimum start. They say that a face-to-face is equivalent to ten thousand votes.

But no officer ever wins a battle. The foot soldier is always the winner, if there is one. The general just calls the shots. If the troops don't perform its all a lost cause.

This has always been a big advantage we have had in war. When our officers fall, there is always some lower ranking person who steps in to fill the gap. Most of our enemies troops were lost when their officers were neutralized.

And you, unknowledgable soul that you are on the subject of
radiotelegraphy, do not have a clue that the very improvements that you
note also enhance CW operation just the same.

But practical applications have varied all over the landscape. Hams
need practical knowledge about how to implement the old basic
technology.

> >But they press on, oblivious to their

I think all the above, in quantities that introduce the applicant to the basic concepts. Of course there was once an Extra class exam that went far beyond the basics. That's long gone.

We agree. Sometimes the test content looks like nothing more than filler.

Which made it all the more curious to me why ARRL would sue the FCC.

I have said that having to memorize over 1000 questions to get all amateur priveleges is a lot harder than my having to study 16 pages of study guide as a 14-year-old kid was.

Does that really say the following to you?:

>> > Yep, "Gimme my privilege, and shove your assertions of personal
>> >responsibility."

If that is what you are perceiving from my words, your perception is way off base. Are you sure you aren't making it up to try to make a point?

Would it be as bad as the US SSB stations experience trying to operate about 7150 kHz in the evening?

I, too, have experienced QRM from non-US SSB stations on 40 meters. I have experienced even more QRM from other CW or digital stations on 40 meters, though. QRM has been part of my hamming experience since the first day I got on the air. If your experience is different, can you share your secret for avoiding QRM?

>Please. They both realized that they had set standards that they were
>being judged by.

I have discussed this in person with Carl and Bill, over a lobster dinner. IMHO, they were sincere when they told me that they were wrong that Ed Hare posts ARRL policy on newsgroups. I reached my conclusion bases on all those clues one gets in meeting with someone in person. On what basis have you reached your conclusion that they still believe that I post official ARRL policy but are lying about it?

>After trying to weasel out of holding themselves to the
>same standard they set, the NCI board MADE them concede.

What evidence did you use to reach this conclusion?

>Archives show that Carl hated everything
>about the ARS, especially the ARRL.

I remember the days well, and Carl now feels more like I do -- that ARRL is an organization that does some important things that need support. I think that Bill always felt that way; he has been an ARRL State Government Liaison for as long as I remember. Carl, Bill and I all have some disagreements with the ARRL, but all in all, I think all three of us are still ARRL members.

>BTW..after all his posturing about the elimination of the code..or the
>reduction and all the great things he could do but couldn't/wouldn't, it
>strikes me as funny that he never used his get of jail free card and bag
>that Extra license. HHHmmmmm

I have no doubt at all that Carl could pass the Extra easily. Do you?

>>
>>Nope. I stated the source of my observations, gave some numbers.

>
>Actually, you have it backwards. I stated some numbers, and you took issue
>with them.

Incorrect. I posted a reply to Hans Brakob's message, giving numbers and the source for those numbers. Miccolis had to jump in after the fact.

>You also derived some numbers by faulty methods. Like your claim of 59
>Technicians reclassified from Tech Plus.

That was not a "faulty method." The "59" number value was the difference between the total number of Technician license class increase in a ten-month period and the number of new Technician licenses in the same period. That was stated at the beginning of a reply to Miccolis' claims of "faulty methods." A difference of numbers, stated as such, is not "faulty" unless the arithmetic is faulty.

The original subject thread began with the effects of restructuring following the April 15, 2000, change. Miccolis tried to use data prior to that date to indicate post-restructuring effects. That in itself is faulty and misleading since it lumped pre- and post-restructuring data together instead of making a comparison.

>You also made statements that are clearly incorrect, like Technicians with
>Element 1 CSCEs having no HF privileges.

No. I said nothing about "Element 1 CSCEs having no HF privileges."

Neither did I say anything about "Easter Bunnies" although Miccolis seems to claim that I did.

>>There is a common thread among long-timers here in which
>>the True Beliefs of US amateur radio are stated as if reading
>>from a hymnal.
>
>Like what? And by whom? Give us some examples, Len, not these vague claims.

"No CW = No Ham. Know CW = Know Ham." Not a "vague claim" but rather a common statement that shows up in this newsgroup from time to time.

Those alleged "vague claims" have shown up in here constantly under true names and pseudonyms. One can begin with Kehler, KH2D, continue on to Roll to Carroll to an assortement of individuals ranging from ex-USN chiefs (not Brakob) to one younger hotshot who even made up a webpage (trying to copy Kehler, but doing it badly) against the NCTAs and even appeared in the 98-143 NPRM comments. The comments of many PCTAs is publicly documented among those 2600+ documents given by the FCC. The support for code testing and emphasis on HF above all else is like a litany of reasons found in old ARRL documents. It is a virtual hymnal.

Labeling tens of thousands of words in publicly available documents as "vauge claims" is itself faulty to an extreme extent.

The trend prior to restructuring had new license growth coming from the new Technician class licensees. So much growth that it offset the attrition from dropping code-tested license classes. The net result was a small increase in the number of total ARS licensees. That trend continues following the April 15, 2000, date with very little change due to Technician Plus renewals shifting to Technician license class.

My only dispute with Hans Brakob's posting was relative to the number of radio amateurs with HF privileges. I did not observe any great change, only a continuation of the trend that had been on-going for several years. I still hold to that observation regardless of allegations of "faulty methods," "errors," or "mistakes" levelled by long-timers who seem to wish things were otherwise.

> What technique was he using?

Probably an Instructrograph but it doesn't matter. If your language processor doesn't work for 200 milliseconds out of every second, you will never be able to copy 13wpm Morse code perfectly for one minute.

Any town that passes legislation can ONLY do so by
reference to the federal laws (FCC rules). They can NOT
insert additional constraints or requirements (e.g. anything
without ...) in their local laws.

Labels are so easy to falsify that if there was any such
goings on, the ability to generate such "bogus" labels would
spread across the internet in less than 24 hours.

More to the point...the police MUST gain access to that
radio to see it. Does the terms "reasonable cause, search
warrant required" mean anything to you?

> It
>is just about as easy to check power output of a radio using a simple
>power meter calibrated by the local electronics shop (the same place

On what basis does the police get to "confiscate"
the radio to have that local electronics shop check anything?

>And a cop can be taught in two minutes
>to check for modifications to allow operation outside the proper
>frequencies (turn the knob, look at the dial, etc).

ROTFLMAO!

The police go through a 40 hour training class just to
become qualified on using speed enforcement radar.
Given the 100s of different CB radios, just how much training
do you think it would take to satisfy a judge that the cop
knew anything, much less enough to qualify as
an expert in court.

> And that is more than enough probable cause to seize the radio for
>evidence.

Please explaine the probable cause eveidence. I don't see
it here at all?

>And, just like any other evidence seized, that radio can
>then be tested by a electronics expert, and that electronics expert
>can be called into that courtroom to testify if needed.

Ditto my last comment above.
Also, that electronics expert gets paid $$$ to
testify. How many towns want to take on that cost?

> Enforcement of this can be handled easily by local officers, and no
>special skills are required.

Your statement is at direct odds with your other
comments above.

>> 2. *Would* they consult FCC for advice as
>>   provided for in the law before declaring
>>   a licensed ham's station "illegal" and
>>   ordering him off the air, or confiscating
>>   his equipment.

> Jerry, as you should well know, this law specifically excludes any
>licensed radio operation. In fact, HR-2346 requires any local law to
>specifically state that exclusion in writing. Therefore, HR-2346 does
>not give local enforcement officers any authority over ham radio
>operation. Simply show your license and the officer has to walk away.

How does the local cop know the difference?
Are you, therefore, saying anyone with a ham license
is totally exemp from any efforts to have CB enforcement
action taken against them? Consider Bootleg Jack
who has a ham tech licnese and still likes to
operate freeband. Hey, if the locals show up at
his house he just shows them his ham ticket and
off they go?

> As for the person who asked about this, that bill (HR-2346) has been
>passed by both houses of Congress, and signed by the President, so is
>now the law of the land. Therefore, if you want more enforcement of
>CB in your area, feel free to contact your local law makers (city,
>state, or county). Be sure to provide them with a copy of HR-2346 (or
>now 47 U.S.C. 302a, as amended).

I truly wonder how many towns have acted at all under
this new authority.

Cheers,
Bill K2UNK

If that is tantamount to its demise, then that doesn't say
much at all about the claimed value of morse, be it
based on capability of morse (vs other modes), be
it for the simple enjoyment of morse or both.

Seems to me that the use and enjoyment of archery
hasn't ended because no formal need exists for any

following. Likewise there's still a significant following
of people that prefer and buy cars with manual gearboxes...
indeed there is enough of a following for both these
skills that products are still being made to accomodate
that niche market.

> Why do I really believe that is a huge mistake?

I dunno Dick, tell us.

>From another venue:
>"A book with the simple title "Complexity" says that all self-adaptive

Your point?

> I have seen too many failures of high technology to believe that it is
>the total answer to all human needs. It only gets worse with added
>complexity. When will the lockup occur? Do YOU know?

It's not something I give any creedence to, much
less worry about. To submit to such "doomsday"
thinking gains us nothing. We prepare fro the
unexpected as best we can. If we really all were so
concerned about being "ready" for even everyday
emergencies, we'd all be mandated by government
to be CPR certified, to all know how to drive, etc.

Cheers,
Bill K2UNK

The CB problem is NOT so adverse that any one community
is likly to have even one really "high profile" case.  Larger
metropolitatn areas might, but that is not so in suburban and
rural areas where police won't care to begin with.  I live in a
suburban/rural area and have regular contact with other area
has.  Haven't heard of any real "CB problem" on 10m here.

I agree totally with that too. Indeed, the FCC would help
the situation if the "freeband" was given back to the
ARS service which would then make it monitored by
hundreds of thousands of hams.

>I have done, do now, and will continue to take a very proactive stance against

How many of said "influential" folks in any town have
any concern at all over CB vs ham vs anything. It is
NOT a concern to most governing odies at all. More likly
the case that we, as hams, are viewed by those same "influential"
folks as a nuisance because of our antennas, towers, etc.

>When a small aircraft misses the runway at the county airport and crashes
>into a school and someone speculates that 4th or 5th harmonic radiation from

Sounds good on paper, but you have nothing but
speculation and a long wait for that to happen.

>Actually, Phil, effective regulations are already on the books, as you know.
>Typical Use-Permit regulations will allow antennas under imposed
>resitrictions, but those restrictions generally require FCC authorization as

>"well settled".

Most towns allow antennas except where the size of the
support structure (tower) becomes an issue. You don't
need anything significant for someone to run 1000 watts
using just a vertical antenna (see any QST or CG for
many possibilities). I suspect the erection of a verticle
would violate very few actual zoning laws. If your town
allows TV antennas, then you have plenty of latitude to
erect a sufficient antenna to handl pirate CB.

Crash helmets for all vehicle occupants would save many multitudes
more lives than any Morse code testing requirement.

HUH? Vas ist los? I don't understand. You don't believe in God, yet you would use the Bible as an instrument of truth upon which you would swear to your own statements? Why not a comic book or a Playboy?

Cecil, I'm not trying to put words in your mouth, I just don't understand. Are you sincere in your beliefs, or are you just putting us on?

Jerry

In article <3ae1ebc5.2860704@news.mindspring.com>, Bill Sohl says...

>Any town that passes legislation can ONLY do so by
>reference to the federal laws (FCC rules). They can NOT
>insert additional constraints or requirements (e.g. anything
>without ...) in their local laws.

Of course they can. "All powers not reserved..." and all that crap. Of course, it could be ruled invalid by a court, but someone with deep pockets will have to take the steps to make that happen. Meanwhile, Joe Tribander with 3 kids in college is SOL.

Good luck on this one now, Bill!

You did not specify that set until after I responded.

Once again, Larry, "arbitrary and capricious" is a legal term of art in regulatory law whose definition bears no reemblance to the meanings assigned to each of the words in any other context. I've instructed you in this several times in the past and I see no need to rehash it.

If you can't apply the terms properly, don't. Stop trying to play guardhouse lawyer.

Yup, that's what the statute says. Jurisdiction fails if the suspect holds a valid FCC station license of any type. It then becomes a pure FCC problem once again.

>I truly wonder how many towns have acted at all under this new authority.

Beloit, WI is the city that jacked Sen. Feingold into submitting his bill in the first place. How come they haven't passed the required local legislation yet?

This is a really interesting thread. The sheer variety of the replies is absolutely marvelous. It'd be interesting to try and perform a "cause and effect" analysis. What is the desired effect? Take the various course of actions mentioned and attempt to unbiasedly (the toughest task, no doubt) predict the actual outcome. Compare the the desired effect against the probable one and determine how desireable the actual outcome truly is. Sir Isaac Newton suddenly comes to mind for some strange reason. Good luck, this is a nice approach. Take care and 73 to all.

```

Also note that a failure to enforce in any specific case or situation is generally within the agency's discretion, especially if its budget is a concern. To suceed here, one would have to show a complete abandonment of enforcement, but to counter, the agency need only show any one case anywhere in the country for the given period to overcome the abandonment argument. As long as there's one CB or "freeband" violation per year acted on, the FCC meets its

```
burden.

Actually, it's not arbitrary nor capricious as long as the U.S. remains a party
to the international treaty that requires it. Once the treaty gets morse code
removed, then you're a step closer - but should the FCC retain the requirement
(even for one day beyond), you can't show that it's "arbitrary" because it was
historically required.

Try "Glamorous Glen". There were at least three P-51 Glamorous Glens. It appears that number II was the one which augered into the countryside of Southern France in 1944.

I'm not sure what you mean. Everybody has the right to comment to the FCC. So do interested organizations.

The point I'm trying to make is that when a group claims to have a single-issue agenda, but then gets involved in issues that have nothing to do with that single issue, the group no longer has a single-issue agenda.

Bingo.

There have been single-issue amateur radio groups in the past. Remember the "National Amateur Radio Council" and the "Society of American Radio Amateurs" and the influence they had?

The tapes go to the FCC, not the Congress.

For legal reasons, the FCC needs an audio tape of the intruder transmission. "Paper" reports just don't do it. K2ASP (Phil Kane) is my source for this - I kinda think he knows whereof he speaks ;-)

>>
>Which of course the FCC would dump right back on the Congresscritters
>for not having enforcement monies. But somebody gotta make a stink out
>of it to get the ball rolling or nothing will happen again.

If nothing else, the tapes give the FCC some reason to ask for more money and to allocate some of it to ham radio enforcement. I don't know the legal evidence status of a cassette tape of an alleged intruder sent to the FCC by a ham. But that's what the FCC is asking for, so let's give it to 'em!
>>
>As far as hams really getting the goods on the sumbitches is concerned

Riley and Phil both say the FCC wants tapes. Works for me.
>>

>link.

Sounds good, but I ain't gonna hold me breath.

My uneducated guess is that a tape tells the monitors exactly what to listen for. The accompanying written report tells them where and when to look. The more tapes they get, the more datapoints they have, and when that particular intruder shows up, they have a pile of goods on him.

Another uneducated guess is that the FCC operates on the "example" principle. They can't possibly nab every intruder, so they look for really solid cases and push them hard. A few big fines sends a strong message. Having tape evidence gives them a better idea of who to go after - the intruders who show up repeatedly.

Ed:

My proclaimation of the truth is based entirely upon experience when dealing with no-coders. They are very original in devising lies, rationalizations, and excuses for not learning the code. However, in virtually case, the truth is that they are just plain lazy. I hate laziness. End of story.

>on the highway with the latest from the auto makers.

Bill:

Sorry, no sale. The NCTA have always used the need to "advance the state of the art" -- presumably in digital communications technology, as a primary reason to reduce or eliminate the Morse code testing requirement…as if the two were, indeed, mutually exclusive. The claim had always been that the code test requirement was discouraging brilliant, computer-literate young people who would magically transform the landscape of amateur radio communications technology if only they had the fetters of this time-honored mode removed from them. They have claimed the Morse code, and it's testing requirement, to be everything from "lame" to "ethnic cleansing" -- and insisted that those who support continuance of the testing requirement were not in step with the "inclusive" nature of this hobby, and, therefore, politically incorrect.

No, Bill -- the NCTA and their apologists throughout the years have done an excellent job of marrying the concepts of Morse code skill with technical stagnation -- thus making proficiency in Morse/CW and technical competence mutually exclusive in the extreme. You would have to undo over a decade's worth of Fidonet/Usenet debate on this topic to convince me otherwise. I have read and authored the equivalent of dozens of full-length novels' worth of messages that relate to this topic, and can call myself an expert on the subject without any fear of exaggeration. This is one place where you can't pull the wool over my eyes with one of your classically specious examples.

The link between technical incompetence and Morse code skill is the very foundation of every argument that has ever been made against the pre-Restructuring status quo in code testing.   This is the truth, the only truth, and the only reality. You cannot ever escape this reality in a feeble attempt to justify what has been done to permanently obviate any future growth in the use of the Morse/CW mode. Such use will indeed decrease, and make it easy to expand the amount of amateur HF spectrum authorized to voice modes. Deny this if you will, but it is the truth.

I'm one of those influentual folks, and getting something like this on the City Council agenda isn't all that hard.

The FCC has already busted several pirate FM broadcasters who were interfering with aircraft communications. Just bringing up the possbility of it happening will cause them to squirm. Look at all the debate over RF exposure...and not one shred of evidence that there is any health risk at all.

Antenna regulations in both our city and our county allow only TV antennas, and even those have restrictions. Anything that transmits a signal, regardless of height, is regulated. I was able to convice the local town fathers to specifically allow mobile antennas, since doing otherwise would restrict TV news coverage, and since this was the town where Polly Klass was kidnapped from, they made the exemption. Everything else is regulated.

If the city has passed the ordinance that HR 2364 provides for, and mom and pop are transmitting with illegal equipment, they can bust 'em. Even if it requires "stings" to get it done.

"Every argument that has ever been made"? Larry, if that were a true/false statement, any professional testing expert would tell you that it is prima facie false just because of the wording which allows absolutely no exceptions.

In fact, my argument is that if the med/high speed Morse code requirements had been maintained, the population of the ARS would become too low to sustain the ARS emergency communications function. Nothing said about technical incompetence at all.

All you have to do is look above at what I had to do to earn the $100.
You said if I could show you where I state or implied any division between
one group of laws and another, You will give me $100. You did NOT specify
which posting it had to be. I presented the posting where I satisfied the
necessary condition. Now you refuse to honor your word.

Why do you try to hold me to a higher standard than you hold yourself to?
You forgot to specify which posting. I forgot to specify which law. What's
the difference? Heads you win, tails I lose?

> Then why were you stopping to buy a beer?

I wasn't stopping to buy beer. I was stopping to buy milk and Sprite.
I just wanted some beer for later and this was the last stop before
arriving at my daughter's apartment.

Wouldn't a historical requirement be arbitrary if the reason for
the requirement had ceased to exist?

That is your "compete and insightful" summary of the present impact of UWB on Amateur Radio?

>> Spread spectrum

> We can't begin to agree on what the consequences of use of SS are
> on HF, and it'll be years before that question is adequately addressed.

I think "complete and insightful" needs to be accurate, Dick. SS is not permitted on HF.

>Same as above. In ham radio we don't have any, and it doesn't appear
>likely we will in the foreeable future. What would be the point?

Do you think that "what would be the point" is really a summary of the potential use of digital voice in amateur radio?

>> Synthetic aperture radar

>Not familar with this one.

It was and may still be an international threat to the amateur use of the 70 cm band.

>> Periodic emitters

> More "help" from Friendly Cousin Charlie. Live with it, I guess.

I agree that we can probably live with the present rules wrt periodic emitters.

>> IMHO, anyone who thinks he has a complete and insightful understanding of
>> all of the issues surrounding Amateur Radio is egomaniacal beyond belief. I

line
>> somewhere.

> A long-experienced Extra class ham is not a superior performer to the
>many beginners in ham radio?

Where did that come from? My comment was that Larry's choice of words implied that he knew everything there is to know about Amateur Radio. Do you really believe that I was saying that a long-experienced Extra is not superior to a beginning ham, or were you making that up to try to make a point?

> What is this, becoming a Communist hobby/League?

If you want to make this a communist conspriracy, go ahead, but it really does detract from your credibility.

> Hey, we're paying you to be the expert, Ed, and to handle such stuff
>for us. If no new hams need to be even minimally technically competent

I disagree with you if you believe that new hams do not need to be technically competent.

>I know of no better reason to pay my membership dues than to hire you
>and others to keep ham radio afloat, If you guys can't get it done,
>well, either we'll have to find someone better at it or give it up.

That is my reason for paying my membership dues, too, Dick. But I have never, nor can I, do it alone. ARRL's work in RFI, spectrum protection and a number of other areas is not done by a handful of staff in Newington, CT; there are a number of volunteers who are a lot smarter than I am that offer their help on a regular basis.

> And again, you have done very well at holding down your end of things.
>I still think that Newington could have done a lot better job of liason
>with the FCC in the past couple decades. They need to know us on a first
>name basis, and that first name should not be Squiggy.

I agree that there is always room for improvement, but I would imagine that my name, Jim Haynie, Paul Rinaldo and Chris Imlay would be pretty well known in FCC circles. I would also bet a lobster dinner that if you say the name "Squiggy" to the FCC, that not one FCC staffer will have any idea what you are talking about. If you mean Carl Stevenson, chances are real good that those he met in Washington, both as part of his ex parte presentation and as part of his professional contact with the FCC know him well, too.

Of course, you may not have been being serious about the name Squiggy and intended it only as a gratuitous insult.

So all Mr. Bootlegger does is set up a plain vanilla 4 watt station
in his house and never shows the Locals that KW amp
and the other equipment he has in the basement.
Allowing an inspection doesn't mandate a complete search of
the entire house.

Me thinks in the scope of radio enforcement, any half baked
attorney would clean the clock of a local cop who couldn't
show the required knowledge. As to cops in your state
being "trained" on radar use. I would doubt sincerly that
there isn't some required certification required. NY has a 40
hour training certification.

>> Ditto my last comment above. Also, that

In the few instances where I have interacted with town officials wrt RFI and local regulation, they readily accepted the premise that they did not have jurisdiction.

Of course, what added the exclamation on the decision was the statement by the ham that over and above what the FCC regulations required, he wanted to be a good neighbor and help his neighbors find solutions to the RFI problems.

The bottom line is that we need to eliminate code entirely and not worry about classifications based upon code speed. Code is a thing of the past. It's time to get over it!!

>
>In fact, my argument is that if the med/high speed Morse code requirements
>had been maintained, the population of the ARS would become too low to
>sustain the ARS emergency communications function. Nothing said about
>technical incompetence at all.

Cecil:

First of all, I think you mean the "slow/medium" speed Morse code testing requirments, because 20 WPM is NOT "high speed" code by any stretch of the imagination. The 13 WPM level was intended to demonstrate practical, basic, low-speed code recognition which can easily be copied by non-proficient operators. The 20 WPM test was intended to demonstrate the ability to handle CW traffic at a reasonably productive rate of speed. However, "professional" CW operators in the military, maritime, and commercial services usually BEGAN at 25 WPM and worked their way UP from there!

Now, prior to 1991, when the No-Code Technician license was instituted, the United States had around a half-million licensed radio amateurs. In 1983, there was around 420,000. How many hams does the world need? How big do we need to be in order to provide adequate emergency backup communications capability? Keep in mind, that with the way personal communications capability is exploding in the commercial sector, the role hams play in emergencies is being shoved further into the background. In fact, the only reason why a lot of emergency operations are being conducted by hams at all is because a lot of them are forcing their participation in places where it is neither needed or wanted. The opportunities for radio amateurs to provide meaningful "emergency" communications services these days are shrinking, while, at the same time, reduced licensing standards are creating larger numbers of over-eager wannabe "ham heroes" who may, regretably, create their own "opportunities" to save the day.

We are at the point where we are just as much of a nuisance as anyone's potential salvation. And the sad part is that the HF hams we're creating these days lack the knowledge, skill, and communications proficiency required to be a truly valuable asset under the kind of austere conditions which truly demonstrate our value to society.

In article <nj36et0kqc37jag0i870n5rq2rtd045f3t@4ax.com>, Jim Weir says...

>In my (not so) humble opinion, the parallel between the "hobby" of private
>aircraft and private radio can give us much insight into the old question
>of the relevance of the code.

>So perhaps we need one certificate "amateur radio operator" with
>qualifiers after the first line.

The notion of a "Basic" amateur radio license with "endorsements" after passing tests for various modes is not an idea that should be tossed aside lightly...

..it should be hurled aside with great force!

After all is said and done, the one underlying difference between the amateur radio service and the other personal radio services (CB, FRS, etc.) is the fact that we are licensed to build our own station and put it on the air. We alone are licensed to build a 1.5KW transmitter and put it on the air, without any "inspection" of that transmitter by the FCC before we stroke up on our favorite band.

This "permission to experiment", unique to our hobby both in the equipment *and* the modes we use, is what sets us apart. Restricting our operation and experimentation to only those modes or equipment types we have 'endorsements' for, such as is done in aviation, would be the end of the Amateur Radio Service.

Since we couldn't tinker with anything new until we had studied and tested for the endorsement, experimentation and tinkering would come to an immediate halt. There is little enough of it now, and the idea of qualifying for endorsements before we could tinker with a new mode or technology would end experimentation within the framework of amateur radio for all time.

The only legimimate function of testing in the context of amateur radio licensing is to ensure that the licensee has a basic familiarity of technical concepts, such that they can ensure that their experimenting and operation does not trash the electromatic spectrum for other users, and that they stay within the bands allocated to them.

I firmly believe that the amateur rules ought be simplified to:

97.1 You are required to pass a technical test to show that you understand how to build simple equipment which meets spectral purity specifications of .....blah, blah, blah. You will be issued a callsign when you pass the test. Transmit your call sign once every 10 minutes when on the air.

97.2 Your power limit is 1.5KW to the antenna. Here are your bands. Stay inside of them.

97.3 Your are encouraged to tinker and experiment and communicate and do public service and talk to strangers in far away lands. The government doesn't care what mode you use for any of this.

97.4 Play nice. Deliberate interference will cause your license to be immediately and permanently revoked.

/signed/ FCC

I think most of us are at least resigned to seeing it disappear as a testing criterion but you seem to want to outlaw it entirely. Sounds like an emotional problem for the chaplain.

Your problem is simple. If you sold the idea to whoever mattered in the next 38 seconds it would still be at least five years until it could be done in as a testing criterion. And selling the h.f. amateur community serves no purpose whatsoever.

It would seem that downloading Morse Academy http://ah0a.org and devoting the time you are now spending on a meaningless activity trap to a fairly trivial exercise would be a somewhat more adult approach.

Bureaucracies move slowly. Time to get over it.

From: J1aguiar <j1aguiar@aol.com>
Subject: Morse Code
Date: Sunday, March 07, 1999 5:25 PM

What is wrong with everyone. Trying to flush the code requirements for the sake of simplifying the license requirements does not make sense. Morse, or CW is a mode of communications, and a dam good one. Communications is what Amateur Radio is all about, in fact Amateur Radio provides the best communications known. Can you imagine having a the best in communications known and not knowing the Morse Code?

When all else fails, and its a dam good bet were all going to see that happen, its Morse Code that is going get through if its still around.

What good is it going to do to have 1 million Hams that cant do anything but punch a keyboard on a computer or talk into a microphone when all they have is two wires to scratch together to send a signal.

I have even found using a flash light a means of communications using Morse Code, but if the guy on the other end does not know what the on and off sequences mean, like Coast Guard, then its a waist of time.

Same thing with the classes of licenses. . . . What is all the fuss about? One class of license, Extra plus the 20 wpm is not asking too much.

If that seems to be difficult, I strongly recommend basket weaving or watching sports on TV like the rest of the morons.

From: J1aguiar <j1aguiar@aol.com>
Subject: ARRL is full of you know what
Date: Sunday, March 07, 1999 5:37 PM

All the ARRL is looking for is to increase the membership in order to increase the flow of bucks. Who is kidding who. Its all politics and money.

Smarten up. . . . Ham Radio is being sold down the river. If the ARRL had their way about it, licenses would be $10 each with a ARRL logo on it.

I would rather spend $100 to renew my license and have the FCC continue on doing things the way they did them once before.

From: J1aguiar <j1aguiar@aol.com>
Subject: SSB contest week end
Date: Monday, March 08, 1999 6:15 PM

Have you noticed that when the contests are running up on the phone band,
~~~~~~

SSB that is, its hard to find a CW signal down at the other end. What does that tell you.

I think everyone is on CW, mostly Extra Class, just listen to the calls and try looking the other calls in the book, 99% of the calls you hear on CW are Extra Class stations.

Tell me that CW is not the popular mode and I will tell you your full of it.

A half a century of CW and I can tell you there is more going on there than any other mode today.

The only reason the US Gov. tossed it out is because of man hours, Robots work cheap and they don�t need time off.

The US is still training men for Morse Code, I wonder why ? Your dam right.

Anyone who is either to lazy or stupid that they cant learn the code should be patient because the ARRL is going to hand it to you in trade for your membership, ain�t that the new trend today.

From: J1aguiar <j1aguiar@aol.com>
Subject: Fractured Fairy Tales
Date: Tuesday, March 09, 1999 8:17 AM

Why is ARRL playing Tinker Bell and changing the rules again. Novices and Technicians automatically becoming General Class Licensed Amateur Radio Operators.

What happened to Mother Goose and her incentive program?

Anyone who tells you that this plan is going to work is out of their mind.

We all know that anything that comes easy is never the same as something we have to work hard for. Nothing can be free.

The old saying, the fish rots from the head down.

Unless we all stand together by saying no to the ARRL and its proposals, the rotting will infect Amateur Radio.

One good way is to discontinue subscriptions to QST and the ARRL membership. It�s the only thing that is going to make the listen up, Money.

If your reading this, you should be able to send your message to ARRL letting them know that the knife is in hand and the rotted head is about to cut off.

Subject: Have You Noticed
Date: Wednesday, March 10, 1999 8:39 AM

Check the FCC listings on upgrades http://www. qrz. com/new_hams. html?

You will notice all those rushing to get the Tech and Novice. Why not, its going to be an easy way into General Class as soon as the ARRL proposal goes into law. If that ain�t cheating.

This is ARRL's idea of incentive licensing just to increase membership?

This is what happens when a magazine publishing company takes over.

What would happen if Private Pilot, or Aviation Magazine was to propose a private pilot licensing restructuring plans to the FAA.

If you have been reading, there is one fellow at the FCC now who is working hard to clear up this mess of jamming and foul mouth activities. What do you think he is going to be up against when this new proposal goes into law?

All I am saying is, if you want to get into Amateur Radio, do it the right way and earn it.

From: J1aguiar <j1aguiar@aol.com>
Subject: Seven Hundred Thousand Chickens
Date: Thursday, March 11, 1999 9:59 AM

Have you ever seen one of them chicken commercials on TV. Yea, they remind me of the Amateur Radio population. Like them chickens, us Hams are all going to go the same way as them chickens. ARRL is taking us to market, but not till they pull our necks and defeather us. Lets not wait for this one to hatch. Let them chicken pluckers at ARRL know that we are not going to stand for it.

Does ARRL have anyone by the name of Purdue on the Directors list?

From: J1aguiar <j1aguiar@aol.com>
Subject: Where is the Incentive?
Date: Thursday, March 11, 1999 3:57 PM

If the Novices and Technician Class operators are automatically upgraded to

General Class I want to know where the incentive plan went.

Is this some kind of joke, or are they really serious? What is the reasoning behind this sort of plan?

Has the ARRL changed its policy on incentive licensing?

I see a lot of new comers just sitting back and waiting for the up grade. The other day I was listening to a conversation on two meters. One fellow who was a Technican had just gone out and purchased a new transciever for the HF bands so that he will be ready for the freebie upgrade. In fact I heard him saying that he has already been on the air with the radio to see if it really worked.

Where is the ARRL taking Amateur Radio in the Y2K. I sure would like to be more supportive and lend a helping hand to all those who are willing, but this sure takes the wind out of me.

In my time I have helped many new youngsters into Ham Radio, and each and everyone of them learned the code and studied. Everyone today has upgraded to the top Class of license, and I may add all have become expert CW operators.

Today I dont see any takers or interest in Amateur Radio. Most of the people today who are seeking an Amateur Radio license are unwilling to learn what radio is all about. It has something to do with computers, and for some reason it makes them feel as though a need to become an Amateur Radio Operator is needed. Some where along the line radio and computers have been linked together and that is a misconception that all to many of us today don
�t understand, especially me.

From: J1aguiar <j1aguiar@aol.com>
Subject: Fox in the Hen House
Date: Friday, March 12, 1999 10:21 AM

The same old story we all heard before about the fox in the hen house. Well Amateur Radio reminds me of that same story.

Living on farm I have learned to listen to the hens when they make a ruckus and start cackling up a storm.

Like Amateur Radio there is a lot of cackleing going on and it reminds me of the fox in the hen house.

We all know that the fox aint in there to help the hens. As a result the hen population is reduced and we all know what that leads to in the end.

The answer is, you either get rid of the fox or reinforce the hen house to keep the him and other varmints out.

From: J1aguiar <j1aguiar@aol.com>

Subject: I dont believe it
Date: Saturday, March 13, 1999 5:19 PM

I don�t believe that increasing the ham radio population is going to solve any survival problems in the future. In the past I have always seen that by letting the chips fall where they may was always the best way to find out where its going.

Over control or forceing is a destructive method of tweaking for the future.

By maintainint the high standards of Amateur Radio will indeed make the hobby more attractive. Those who are seeking lower standards are the ones who will destroy Amateur Radio.

I strongly recommend the single class of license of the Extra Class, and a non renewable one or two year term Novice for the entry level.

It wont take long before all those who have nothing to offer and are just waiting to be automatically up graded to General Class will realize that Amateur Radio is something that requires one to buckle down and learn something instead of complaining.

Anything worth having is worth working for. If it comes free it has no value.

From: J1aguiar <j1aguiar@aol.com>
Subject: Be Really Smart
Date: Tuesday, March 16, 1999 8:04 AM

What I cant understand is why some of those who reply to these postings are the same ones guilty of what the article is about.

Those who are waiting for the other shoe to drop, as in the automatic upgrade to General Class.

Tech and Novice classes who read this with great antisapation. Instead of waisting time knocking the system here and being so smart with their snide remarks, why dont they simply go out and up grade now instead of waiting for a free ride.

So all you big mouths, before you get smart here, try getting smarter by doing what it takes to earn your up grade.

One thing the ARRL has done right and that is the incentive. Actually it is not new as the incentive program has been around for some time long before ARRL suggested it.

The one big mistake is going to allow automatic upgrades for Novice and Tech.

If your a Novice or Tech now the class privilages should remain the same as they are now and when the license term expires it simply can not be renewed.

I dont see any hardship in having to take an exam for the upgrade. All I see is a give away program that is in total contrast to the incentive system.

From: J1aguiar <j1aguiar@aol.com>
Subject: Good Work
Date: Tuesday, March 16, 1999 8:09 AM

Congratulations to Mr. Hollingsworth for the work he is doing. I must admit that I have not really heard any of the jamming or foul lanquage on the bands my self, but I have heard others complain.

From: J1aguiar <j1aguiar@aol.com>
Subject: ARRL
Date: Thursday, March 18, 1999 11:39 AM

I hope that in the end tht the ARRL and FCC can see its way clear to resolve the restructuring program so that those who are now Novice or Technician Classe will not be easily upgraded. After all upgradeing by completing what ever elements are needed for the General Class is no hardship.

Simply put. if your a Novice or Tech. Now is the time to upgrade before your old licence term expires. You wont be sorry.

From: J1aguiar <j1aguiar@aol.com>
Subject: Read QST
Date: Thursday, March 18, 1999 11:45 AM

No Question, reading QST is one of the best ways to stay informed as to what is happening in Amateur Radio today. Reading this April's issue was like a shot in the arm. Keep up the good work ARRL and Mr. Hollingsworth, its what I have been waiting to hear.

From: J1aguiar <j1aguiar@aol.com>
Subject: Re: I dont believe it
Date: Friday, March 19, 1999 11:37 AM

Here again. Another fellow who holds a Tech Class license. Time and time again its the same ones who complain and talk about all the reasons why the code should be either reduced to a feable 5 wpm or eliminated.

If the code remains the same and it keeps people like this from ever becoming real Amateur Radio Operators , then I would have to say why lower our standards for the few who can not meet them.

Once again, learning the code and being able to send and recieve it at 13 or 20 wpm is no big deal or for sure no hardship, Unless ofcourse one is unwilling to learn something that he will never regret.

This crappola about the US Government no longer using the Morse Code and that is why Amateur Radio no longer needs to have it is nothing more than a lot of crap. Give me a break.

From: J1aguiar <j1aguiar@aol.com>
Subject: NO CODE?
Date: Friday, March 19, 1999 12:32 PM

Since this no code thing has started I hear more and more people using two meters as a cheap way of havng a cell phone.

Husband and wife talking about what is for dinner, or who is picking up the kids after the basket ball game.

Even imigrants who barely speak english never the less read it are using ham radio for the same purpose.

No code is turning amateur radio into another CB form of communications. The only reason they support the local radio clubs is to be able to use the phone patch. They have not interest in amateur radio what so ever.

If allowing to lower the standards of amateur radio, it wont be long before this same type of activity will become popular on the HF frequencies as well.

During the past 44 years I have seen many changes in amateur radio, some good and some not so good, but if we continue to lower the standards it wont be long when we have no amateur radio at all.

From: J1aguiar <j1aguiar@aol.com>
Subject: Minority
Date: Friday, March 19, 1999 6:58 PM

Those who seek to have the code exams abandoned are a minority. The majority of Amateur Radio operators today have already passed their code test in order to upgrade.

Amateur Radio is not going to be loosing much if the minority groups who are either to stupid or so dam lazy that they cant pass a simple test should be left behind.

From: J1aguiar <j1aguiar@aol.com>
Subject: Eliminate Reading
Date: Saturday, March 20, 1999 8:41 AM

They should eliminate the requirments for reading or eye exams for automobile drivers licenses. No one today needs to know how to read, Infact most of the youngsters today, not to mention a lot of adults,who never took the time to learn. What else can we think of that we dont really need to know ?

From: J1aguiar <j1aguiar@aol.com>
Subject: Dictionary Thumpers
Date: Saturday, March 20, 1999 10:54 AM

Subject: Hemorrhoids, or possible spinal problems
Date: Sunday, March 21, 1999 4:53 PM

Sitting in front of a computer for as long as it takes to write hundred of postings on this news group making excuses as why the code is no longer required has got to be hazardous to your health. At least you don't have to worry about brain tumors, because you were not in a high RF environment.

From: J1aguiar <j1aguiar@aol.com>
Subject: Memorizing
Date: Monday, March 22, 1999 3:34 PM

Reading carefully in any of the ARRL license manuals it will advise you to read the text and study all aspects of it carefully.

Nothing can be worse than going to take an exam knowing that all you have to rely on is the answers that you worked so hard to remember. If your looking for a good way to fail and get so discorraged as to not want to try again,go ahead and waist your time memorizing the questions.

The math level for the Amateur Radio exams are at grade school level.The hardest part of the Amateur exams seem to be with the learning of Morse Code.

Its beyond me why that should be so difficult as compared to learning the text because learning the Code is simply memorizing. Its so dam easy that I have to wonder what all the fuss is all about.

Take your exams on at a time, dont rush. Work your way to Extra Class. If you give your self a date, you can have it done in three exam sessions, or three months. You can do it.

From: J1aguiar <j1aguiar@aol.com>
Subject: Making it easy with ARRL
Date: Monday, March 22, 1999 3:45 PM

All one has to do is read QST. They have an excellent monthly articles. This months issue April page 61, The Doctor Is In, is an excellent article dealing with just about every question that is in the Amateur Radio License Manuals.

They even have a quiz page to test you knowledge.

ARRL provides Code Practice live on all of the Amateur Radio frequencies to make it easy and convieniant to fit your personal schedule.

All it requires is a little effort on the part of the person who wants to get his or her Amateur Radio License.

Try it and you will soon be a happier person for it.

From: J1aguiar <j1aguiar@aol.com>
Subject: Discrimination ?
Date: Monday, March 22, 1999 7:28 PM

I like these people who cry discrimination when it comes to learning the code. Discrimination would be if you were not allowed to take the code test like everyone else.

As I remember there was no one stopping anyone from taking the code test.

I dont know where you come from, but dont be afraid to take the code test, you wont be breaking any laws.

Subject: Cutbacks in Connecticut
Date: Tuesday, March 23, 1999 10:15 AM

Reading March 73 Amateur Radio Today on page 8 was somewhat disturnbing.

Cutbacks in Connecticut, ARRL who is supposingly cutting back the size of QST. Several areas of the magazine will be cut back;the space allotted for Section News will be reduced by 15%.

After exclaiming what all boils down to a financial melt down at the Leaque,it goes on to say that Mr. Rick Palm K1CE paints a grim picture of amateur radio as it faces the next century.

The artical goes on and I get the impression that because of the finacial well being and future of the ARRL it   reflects the future of amateur radio.

Amateur Radio is no doubt loosing its crediblity as the requirments for licenses exams are being lowered in order to attract more into the hobby.

If amateur radio license exams continue on be adjusted to attract those who are, shall I say less than qualified,for the sole purpose increasing the numbers, then it will no doubt become nothing more than a meaningless hobby.

As it is now, the future of Amateur Radio is indeed being threatenened.

Remember the old Chinese proverb"The fish rots from the head down".

Subject: What I dont want is......
Date: Tuesday, March 23, 1999 1:13 PM

The day my amateur radio license says ARRL on it with the official logo on the it I will know for sure that were doomed.

Like I have said before here, I dont like to hear that the future of Amateur Radio is linked with the financial health of the ARRL. In fact I could care less what the future of ARRL is . But when a publication company, and that is all they are, jepordizes the wellbeing of Amatuer Radio to save its own skin, that I dont want.

I dont care how many people belong to the ARRL membership as long Amateur Radiio standards are not sacrificed in the process.

After all its supposed to be a nonprofit organization.Once again I say, The fish rots from the head down.

From: J1aguiar <j1aguiar@aol.com>
Subject: Morse Code
Date: Tuesday, March 23, 1999 4:38 PM

Morse Code, or CW as we call it is as much a part of Amateur Radio today as it was in the beginning. Infact its even more so today than ever before.

If the code speeds are reduced it will only be another step in dumbing down the license requirments.

No one should even be allowed to become licensed as an Amateur Radio Operator unless they can qualifiy to meet todays code standards.

Anything less than 13 wpm is totally out of the question, and as for the Extra Class license, 20 wpm is not asking much to become what is known as the ultimate in Amateur Radio licenses.

If you dont have what it takes, no matter if its Aviation, Amateur Radio, or what ever,if one can not make the grade for what ever reason, then its high time to consider something like Bungee Jumping or Basket Ball, Oh yea, I think basket weaving is a code free activity.

One thing for sure, I hope Amateur Radio never reaches the same level as the latter group of activities.

From: J1aguiar <j1aguiar@aol.com>
Subject: Something For Nothing
Date: Friday, March 26, 1999 9:41 AM

No matter what, there is always someone who will complain about one thing or another.

Like amateur radio license exams.The code seems to be the big stumpling block at this point. Lets assume for the sake of argument there was no code, it was never invented. Then everyone would be looking for another scape goat excuse to make it easier. It goes on and on.

I am willing to bet that all those here who complain about the difficulties they are having to get a ham ticket are also having problems with just about everything in their life.

Think now for a moment, if your one of those who are having problems with this license thing,go to your magic mirror on the wall and ask the mirror who is the laziest one of them all. I have a feeling once you get your answer your going to have seven years bad luck.

Another question should be, is why do you want an amateur radio license. Now just dont take that question lightly, really give it some serious thought if you can. I bet after really thinking hard you really dont give a hoot about amateur radio or what its all about.

Subject: Ten Thousand Monkeys
Date: Friday, March 26, 1999 9:48 AM

I am willing to bet if ten thousand monkeys were to take a code exam none of them would ever pass it.

Must be something to do with bananas and swinging from tree to tree and being as happy as a monkey could be.

From: J1aguiar <j1aguiar@aol.com>
Subject: Morse Code
Date: Friday, March 26, 1999 7:26 PM

I cant understand anyone saying that Morse Code is not being used. I think that the reason most people dont realize its being used is because they cant make the distinction between Morse Code and Teletype. Anyone who knows what Morse Code sounds like should not have any problem finding the many commercial stations that are using it.

Just the other day, I heard a shore station exchanging information with a ship at sea using Morse Code. The ships radio operator was using a bug to send with and I might say he was going a lot faster than the required speed for any amateur radio exam.

Anyone who does SWL and knows the code certainly will agree that in todays communications Morse Code is still being used to a very large degree.

Our US Government uses it all the time, ofcourse not as much as they did at one time, but never the less they still train men to copy Morse Code today.

As for the Amateur Radio bands, there is more activity on CW than all the other modes combined. I am talking world wide CW by every country there is speaking any lanquage you can think of.

Amateurs from every country is using CW and doing it using the English lanquage. Ham radio operators from other countries are expert telegraphers and most capable of using CW at very high speeds with out any problem.

Its a lot easier to understand a Russian or Italian using Morse than it is on SSB.

The other thing is, a small simple low power transmit recieve station and a battery is all that is needed to send and recieve CW world wide, amazing.

Last but not least, it does not require a wide band width.and can be recieved with the simplest of recievers.

Anyone who has used QRP CW will tell you how flawless this system is.

In todays modern technology, satelite communiations uses CW because its the only mode that will get through.

Subject: State of the Art Personal communications
Date: Saturday, March 27, 1999 12:44 PM

I guess by now everyone has noticed that Yaseu , Icom and I think perhaps Kenwood is manufacturing a small hand held transciever that does not require any license to use.

I may also add, Citizens Band radio no longer requires any FCC permit and has two modes of operation to choose from, amplitude modulation and single side band .As far as I know there is no CW used on CB making it a more up dated class of operation.

Last buy not least,Internet offers world wide communications with no QRM, QRN,or poor band conditions to contend with, and once again no licenseing requirements.

Those considering state of the art communications should be encoraged to explore the many advantages of these new methods of communications.

In fact if telegraphy was available on any of these modes I would consider it my self,but like I said it is state of the art technology.

From: J1aguiar <j1aguiar@aol.com>

Subject: Cheating Prime Ribs
Date: Saturday, March 27, 1999 4:21 PM

Memorizing just the answers to any exam certainly is more work that actually studing and learning, not to mention all the benifits and self gratitude.

I suppose anything in life can be done by cheating, but the only one your cheating is your self.

Its like sitting down to a prime rib dinner and feeding the dog under the table your prime rib so that everyone will think you ate it all. You sure have to be some kind of stupid dim wit to pass up any thing that you would benifit from.

But we all know it does not work quite that way, cheaters usually eat more than their share of prime rib, especially if its free.

Subject: FCC Proposal
Date: Monday, March 29, 1999 12:00 PM

FCC will maintain the current sending and recieving code tests as they now stand. The FCC has no intention of reducing or eliminating the code tests from Amateur Radio license exams.

As for the those who are now currently licensed as Novice and Technician, and Technician Plus. The Novice class will be eliminated as it stands no credit will be given towards upgrading as its an entry level license and is being completely eliminated.The Technician Class license holders will be allowed to continue using their current privilages until the expiration date, at which time will become void. Technicians have until the expiration date of their current license to upgrade by completing the required 13 word per minute code test,otherwise be required to retake the General Class.

Written Exams for Extra, Advanced,and General class license will be reviewed to include text to increase the knowlede of state of the art communications.

Also as part of the written exams, oral examinations by the V.E. examiner will required along with black board illustrations.

No Amateur Radio license shall be taken unless a complete course in Amateur Radio communications and practices consisting of no less than 100 hours is completed and edorsed by the instructing team of VEC instructors.

Apon reciept of a certicate of completing class, one will be given a certificate of completion that will allow amateur radio privilages on specified frequencies at any ARRL affiliated radio club. The clubs call letters will be used in conjuction with a slash N for identification.

Subject: The Real Reason For CB Radio
Date: Tuesday, March 30, 1999 11:32 AM

Does anyone know the real reason Citizens Band Radio was put into use? I wont go on to tell you why as no one would believe me anyway. You dont have to think to hard, and I would recomment a little research. All I can say is, thank God CB Radio was never used for its intended purpose.

However CB Radio should be included as part of every automobiles radio system. I know it was at one time as an option, but I do not know if that option is still available. The regular AM and FM radio would squelch when the CB radio was activated allowing one to have the choice of monitoring the CB radio during regular radio listening. I thought that was a nice touch.

I think this is what the majority of people are looking for today, a license free personal communications system.

I suppose now Cell Phones have taken over making communications possible from just about anyplace any time with the capability of direct contact to whom every your seeking to communicate with.

My automobile has long since been equipped with a personal cell phone in the event of an emergency, but I do still keep a small CW transciever tucked neating into the console for them long trips.

From: J1aguiar <j1aguiar@aol.com>
Subject: Amateur Radio means CW only
Date: Tuesday, March 30, 1999 2:15 PM

If they were to change all the rules by allowing anyone who simply wanted to play radio on the radio frequency spectrum could do so.

Amateur Radio would become a CW only thing.Anyone who thinks they would like to use CW could simply take the Amateur Radio license exam for it. All those who dont care for CW can simply be a Non Amateur, Communicators Class operator...

What is all the bull about with Amateur Radio, its only a title and nothing more.

The ARRL would have to change the wording on the front cover of QST to say Devoted Entirely To Communications. Does not have to be devoted to Amateur Radio.

The sooner Amateur Radio gets ARRL out of its hair the better. There drowning in a financial black hole and trying to suck Amateur Radio in with them.

Perhaps a Communications Magazine would help them survive the mess they got them selves into.

Then ARRL could lobby to steal CW frequencies from Amateur Radio for their new group..American Radio Relay Leaque does not have to mean Amateur Radio....

From: J1aguiar <j1aguiar@aol.com>
Subject: CW For Ever
Date: Tuesday, March 30, 1999 6:26 PM

Long live CW, and it will. Who would think in this day and age they are selling electronic keyers, paddles at astronomical rates.

Vibroplex is a good example. They are selling more telegraph,BUGS,keys as now as ever. And the thing about it all is hams are paying the price for them.

Listen to the CW bands, especially 40 meters where its not uncommon to hear the sound of a bug going along at 30 wpm, or a keyer or keyboard at speeds in excess of 50 or 60 wpm. And let me tell you, its all being copied by ear.

Listen to the traffic nets on CW.

There is more happening on CW than any other mode.

Last but not least, Amateur Radio means CW before it can mean anything else.

The day CW or Morse Code standards are lowered or removed from the licenseing exams will be the sadest day in the history of Amateur Radio.

Amateur Radio skills are dwindling at an alarming rate and if allowed to continue there will be nothing to be proud of.

During local radio club gatherings I notice its not like it once was. A less friendly atmosphere. A lack of interesting conversations. I have since given up belonging to a club because all one talks about is computer games, like my Star Wars or Rainbow Seven is terrific.

Subject: AM Flashlight
Date: Wednesday, March 31, 1999 9:15 AM

Many years ago my friend and I tried to modulate and detect audio from a flashlight, we even went on to using a more powerful spot light. At close range it worked perfectly and audio was transmitted on the light beam.However using the same light idea for sending Morse Code, a small pen light coudl easily send a signal clear across the harbor to his house. By mounting the lights in a fixed position and attaching a key and buzzer along with the lights we were able to use out communications set up as long as the fog did not roll in. Of course it did not take us long to learn how to build and use radio frequencies and then we could communicate from our bedrooms which were out of the line of sight.

I think superimposing an audio frequency of any kind on a sineusodial wave is total destruction to its purity....Joke.....

The posting Re: The Term Amateur by Larry K3LT was well said. I must agree with him. Most of the postings here are simply off the wall with nothing more than dim witted reasons by a few people who either can not learn the code,or simply refuse to do so for what ever reason.

The sooner the ARRL puts the no code thing to bed the better off ham radio will be for the ARRL and for everyone who enjoys the hobby for what it really is.

From: J1aguiar <j1aguiar@aol.com>
Subject: I Remember When
Date: Friday, April 02, 1999 10:50 PM

I remember when the ARRL proposed the incentive licenseing plan to beef up amateur radio. Everyone was eyeing the radio frequency spectrum,and unless amateur radio could prove worthy of its name it could very well loose the right to continue using the frequencies that we now have. So the incentive licenses became a class act. Here we go again, only this time its 180 degrees in the opposite direction with eliminating classes, and lowering the standards for license exams. The no code thing is another farce, a gimmick directed at the weak minded that can not muster up enough brain power to cut the mustard. QST has been reduced to a low level reading that offers nothing more than idiotic articals written primarily to attract new comers. I hate to say it, but 73's and Wayne Green, Never Say Die, is more fun to read, at least I can get a good laugh out of it.

From: J1aguiar <j1aguiar@aol.com>
Subject: The Cheaper it is, The Less its Wanted
Date: Sunday, April 04, 1999 11:23 AM

Seems as though everyone is lusting after the hard to get licenses that require a code test of 13 or 20 wpm. That is a good sign because it means that Amateur Radio is still wanted, its value still is high.

As the standards are lowered, more and more people will become hams who simply applied for and recieved a license with little effort on their part.

The value or worth is lessened, and fewer people will have the desire to obtain a license for Amateur Radio.

With even more time the entire Amateur Radio licenseing will be eliminated and everyone will be able to use Amateur Radio frequencies.

When the final end comes and the name Amateur Radio is forgotten, I am willing to bet that CW will still exsist and there will always be those special ones who will be heard through out the waist land of radio frequency space using the old mode of telegraphy.

Who knows. a whole new breed of Amateur Radio Operators may be born that are devoted entirly to the art of ancient telegraphy.

Go to any Yacht Club and meet the high caliber people who own sail boats. Its just not for everyone as it is now only for the upper class.

There is no reason why any ham worth his salt cant repair what he has today.

I am not saying he has to build a Kenwood TS 950 SDX , but he should be able to repair anything that goes wrong with it. All that is needed is the basic tools and every ham should already have them in his tool box. The best tool is on your shoulders.

From: J1aguiar <j1aguiar@aol.com>
Subject: Actually ....
Date: Sunday, April 11, 1999 10:20 PM

The best proposal would be to shut down the amateur radio frequencies to all modes except CW. This would allow more room for CW to expand. Lets face it, if all you want to do is talk, get your self a cell phone or a no code two meter radio and go talk to someone. All I hear on the phone bands is nothing more than a lot of soap box conversations, I this and I that, yak yak yak about nothing what so ever.As for the digital crappola, and that is exactly what it is," CRAPPOLA", that is what computers are for.Last buy not least, the code tests should include one hundered percent copy on paper. This would leave one class of license of all top gun first class amateur radio operators. After all, amateur radio is telegraphy.

Subject: The Radio Kraze for Y2K
Date: Monday, April 12, 1999 11:47 AM

Seems as though there is some sort of Kraze going on for personal communications. Most of the people I hear on the VHF repeaters are mostly into hamming simply for personal reasons. Hello Honey, I am on my way home from.........what is for supper.......do you need anything at the store.....tell the kids I will pick them up in a few minutes......Is this what ham radio is coming to ? What happened to the cell phone idea ? Pretty soon we will be hearing drug deals going down on the repeaters and all kinds of other non amateur radio activities. I even hear foreign imagrants speaking non english for hours.One fellow is in a bar talking to another driving a truck. Dont ask
to use the repeater either because they dont understand you. It wont be long before this sort of activity is taking place on the HF frequencies between the USA and the Azores Islands, Hey Manual, how is Juan doing with the cows.Thank goodness for CW, at least I wont hear that crap.

Subject: Hams Can Fix an Automobile
Date: Tuesday, April 13, 1999 10:27 AM

Every ham should know what is going on behind the front panel of his radio equipment. Fortythree years of amateur radio and I have built all my own equipment, not to mention antennas. Over the past years I have gone to commercially made ham equipment. Even though I have stopped building my own radio equipment, I do understand and can repair my own amateur radio station when needed. Most of the hams today are not capable of repairing their own radio equipment and I can perfectly understand that.The problem is they are not interested in the technology that goes into the ham equipment they own. I often wonder how anyone today is able to really understand the theory that goes into the license exams. The younger people today seem to be a lot more on the ball than when I was a kid, yet when it comes to learning something they seem to look for the easy way out instead of being curious enough to want to learn. I hear the same excuses, like I own an automobile but I am not a mechanic,so should I need to know what makes my car work to have a license to drive. When I was a youngster no one said I had to be a mechanic either, but I learned how automobiles worked and repaired my own because I was interested in learning,most of all it was fun.

Subject: Sacrifice Amateur Radio
Date: Friday, April 16, 1999 11:03 AM

Seems as though there are a few,so called no code indivisuals who are willing to sacrifice amateur radio to suit their won personal and greedy habits of getting things for nothing. Lowering standards is certainly not a good choice.

On the air conversations reflects an entirely different view of what I read here on NG. I have yet to personally meet a ham who is in favor of lowering any standards. No one I know has ever had any difficulty in upgrading.

ARRL employees are agaist the lowering of standards but are keeping quiet for obvious reasons.

No code advocates have actually employed Exrta Class amateurs with two letter calls to play devils advocate by using their calls, as if to say I am an extra and I am for it, well anyone who has been around amateur radio for any lengh of time can see through that scheme.

To sacrifice for the sake of a few unworthy indivisuals is not only wrong, its totally against the grain of what America is all about.

Subject: How Old Is FM
Date: Friday, April 16, 1999 1:31 PM

ARMSTRONG, Edwin H. (1890-1954). The static-free circuits that make all radio and television broadcasting possible were invented by Edwin H. Armstrong, an American engineer. When he was only 21, he devised the regenerative, or feedback, circuit that not only brought in signals loud enough to be heard across a room but also generated wireless waves. Edwin Howard Armstrong was born in New York City on Dec. 18, 1890. As a child he was interested in mechanical contraptions. At age 14, having decided to become an inventor, he built a maze of wireless apparatus in the family attic. He attended the Columbia University School of Engineering.

During World War I, while serving in the United States Army Signal Corps, Armstrong invented the superheterodyne circuit. This is a highly selective means of receiving, converting, and greatly amplifying very weak, high-frequency electromagnetic waves. It is the basis for almost all radio, radar, and television reception. In 1933 Armstrong secured the circuit patents that were the basis of the frequency modulation (FM) system. He died in New York City on Jan. 31, 1954. And oh yea! he was a ham.

From: J1aguiar <j1aguiar@aol.com>
Subject: Percent of What
Date: Friday, April 16, 1999 8:53 PM

What percent of who are in favor of a lowering the code requirments? Seems as though the percentages of Advanced and Tech Plus's, is close to that number. Its easy to understand why there are so many who want the code out of the equation. Advanced hams are drooling for that Extra Class priviage, and of course Tech Plus's are all in some kind of rectal discomfort waiting to automatically move up to take over General Class frequencies. Seems as though all these numbers are manipulated to suit the needs of whom ever it pleases. The bottom line still remains. Why should any changes be made when the Extra Class population is growing faster than the lower classes. Just listen to the CW ends of the bands and it does not take more than a second to realize that its jammed with Extra Class CW activity, especially during a contest week end. The Majority of hams dont sit around crying for sympathy, they are all working DX on the low end of the CW bands.That percentage of no coders are the loosers that make up the percentage against, that is where the magic numbers come from. In fact, the number is so dismal,its pathetic and not even worth considering.

From: J1aguiar <j1aguiar@aol.com>
Subject: The Last Posting
Date: Saturday, April 17, 1999 9:37 PM

Many General Class amateurs who took their exam at FCC field office's have never forgiven ARRL for the incentive licensing. This cost the already General Class licensee privileges that he or she already had. Ofcourse the majority have already upgraded to Advanced or Extra soon after the incentive program went into affect,but there are still those who have'nt Today new proposals being that Novices and Tech Plus amateurs are going to be given credit towards a General Class license certainly is rubbing a lot of old General Class amateurs the wrong way. I suppose they feel as though they should be given credit for at least the Advanced license. Then the Advanced amateur would want to be given the Extra Class. The ARRL really screwed up big time with incentives, only to go full circle and do a non incentive program to fix the mess they made the first time. The more you think about it, the more it begins to sound as though things are out of control. So now what is the ARRL up to now? Reduce the code requirements, make it so that Novices and Tech Plus licensees can move up to General. Is this the kind of leadership amateur radio deserves? And now I read here on the NG that some ARRL people admit that Amateur Radio is being pawned. Quite frankly I was surprized that anyone from the ARRL would post such a statement. I am afraid that amateur radio is changing, and its not for the best.

Subject: ARRL Get Real
Date: Sunday, April 18, 1999 2:21 PM

ARRL You have to get these NCI thoughts out of your head. If the League wants to be around for the future it dam well better start by making Amateur Radio a respected hobby. There is just to much at risk here and those who are in favor of changing things dont know diddley about buisness and they could care less if the ARRL lives or dies.The only thing they are looking for is to use ham radio the way they see fit. I would strongly suggest keeping a firm grip on the helm and downsizing the over head at the leaque to offset the financial problems. Restructure and change within the ARRL and plan for a smarter future by keeping Amateur Radio healthy for the Y2K. Its amateur radio that is going keep the league going,and amateur radio means real hams, not the kind that cant learn how to use CW. Your basing your future on loosers and amateur needs winners.

Subject: Why A License?
Date: Thursday, April 22, 1999 1:20 PM

Why does one need to have a license to communicate as in ham radio. Actually its a thing of the past and the days of having to regulate ham radio are no longer required. The FCC could simply set up some new form of guide lines to follow. The Citizens band frequencies could once again be combined as part of the allowable frequencies for communications. The name Amateur, or Ham and Even Citizens and Personal can be used as a classification. With this simpler form of communications, anyone could use these frequencies with out the pain and hassle that now exsists. Those who choose to continue on using CW can still do so. There is plenty of room for everyone to use the frequencies that now exsist. As for call letters, Pick anything you like " Handle".

From: J1aguiar <j1aguiar@aol.com>
Subject: Focal Points and Fuzzy Images
Date: Friday, April 23, 1999 11:15 AM

The focus seems to be on lowering the code requirements with the possiblity of eliminating them all together in the future. Seems as though because the code is no longer used by the military it is no longer needed. There are those who are having a difficult time mastering it and feel as though its a waste of time to learn something that is no longer needed. The code is said to be a weeder to prevent some from obtaining a ham license Lowering the code will enhance the population of ham radio thus increasing the ARRL membership. Total elimination of a license is frowned apon as that would destroy the fabric of ham radio. And I even read something about perhaps a special code only class for those who want to have exclusive code privilages,I dont know how that would work. ARRL is fighting to keep what we have, and that RFI is going to be a problem in the future and pehaps even now. I dont understand how a change is going to correct any of the above problems. The one main issue that remains strong is the code, its that code that is really the big problem.By changing that one aspect of licensing it will be the answer to our problems,for the time being ofcourse. I dont know about the rest of you,but it seems silly to consider that the only reason the amateur radio population is dropping is because of the code.

From: J1aguiar <j1aguiar@aol.com>
Subject: $ave ARRL and Ham Radio
Date: Friday, April 23, 1999 2:59 PM

Why dont we all just write out a check $100. and send it to ARRL to get them back on their feet and for a job well done.In the long run its going to be easier and cheaper to pay. Amateur Radio Operators have been getting a free ride long enough and its about time we stopped complaining and pay our way. Everyone here knows the real problem is money. Its costing a fortune to keep us going. If every licensed ham in this country was to make a donation to the ARRL in order to fight for what we have in stead of changing things that will lower our standards we would all be better off for it down the road. Making the ARRL the most powerful organization on planet earth is certainly not going to hurt amateur radio,and we have the numbers to do just that.

From: J1aguiar <j1aguiar@aol.com>
Subject: Code Speed
Date: Friday, April 23, 1999 8:43 PM

The current code speeds that are used in the license exams are far from being considered high speed. Twenty words per minute is certainly not a fast speed for CW, infact its very slow and somewhat uncomfortable. CW does not start untill thirty words per minute, that is when things just start to happen.High speed CW does not really start until fifty words per minute.The best CW speed for cashual conversation is between thirtyfive and forty words per minute as send with the conventional electronic keyer,any speed above is best handled by a keyboard keyer,then fifty plus words per minute is more enjoyable as it allows for the freedom of thought flow. To consider twenty words per minute high speed is incorrect, and anything less would be to say the least, painful. One does not have to copy code, like one does not copy someone talking, its just understood.The faster its sent, the easier its understood.

From: J1aguiar <j1aguiar@aol.com>
Subject: Solomon,My Final Conclusion
Date: Saturday, April 24, 1999 1:42 PM

The only thing that may solve the problem with code and ham radio is to cut the hobby in half. The no coders can take the upper" phone bands" and those who like code and have passed the 20 wpm code test will have exclusive use of the CW end of the bands,as well as the phone end. Ham radio will be divided in two classifications. No Code Amateur Radio, and Extra Class Amateur Radio. The only hitch is that everyone will have to take the Extra Class exam or loose what they now have. With or without 20 wpm depends on what your priorities are. So here it is again. Everyone gets to be on HF. The no coders will get on all HF phone bands and the Extra will have both worlds because of the 20 wpm code test. Two classes of licenses.Oh yea. the beauty part is that any time a no coder decides that he or she wants to get on CW, he or she can take the 20 wpm code test at any time and become Extra. Last but not least, I still think we have another problem that needs solving and its the ARRL. I suggest that every ARRL member should dig into their pocket and help fund the ARRL so that they can continue on being major represenitive of Amateur Radio. Make no question about it, it is going to cost money to support ARRL and unless we all decide to support them, were all going to loose out in the end.

Subject: Internet I Phone

Date: Wednesday, April 28, 1999 11:01 AM

I would think that the Internet would have more to offer than ham radio.The most interesting is "I- Phone" that allows world wide communications in both audio and video at anytime of the day.No antennas, QRM or poor band conditions,RFI problems,and all the other problems with radio communications. With all the talk about CW, or Morse Code being out dated is to say the least when considering the possiblities available with todays computer technology. I often wonder why anyone today would even consider ham radio as a hobby. As for me, when I was a youngster radio was the rule of the day. If I was a kid today I would not even consider ham radio for a moment. Actually speaking the only significant aspect of ham radio is the telegraphy part and everything else is by far surpassed by todays computer technology. This is why I really think that ham radio for all its worth should be left to CW. Does anyone really see a future in HF radio besides CW, or perhaps the commercial telecommunications industries? I my self, if I was looking at HF radio for the first time it certainly would not be for communications unless it was to practice the art of telegraphy. The only ones who stand to gain a thing out of keeping ham radio alive is the ARRL and the companies who make ham equipment. The VHF and UHF like in two meters need not even be licensed at all and should be open to anyone who desires to communicate and experiment with computer technology at a higher level. My opinion. Jaguar

From: J1aguiar <j1aguiar@aol.com>
Subject: HF for CW only
Date: Wednesday, April 28, 1999 4:28 PM

HF is for telegraphy.Why would anyone waist time playing with anything that is already being done ten times better on the Internet. Radio in the HF part of the spectrum is pretty near dead and telegraphys death certificate is now being written. I think both telegraphy and HF radio should be allowed to die together and all those seeking high tech communications go to where the action is. Its no wonder young people are not looking towards HF radio, its not because of the code,its simply because there are better ways of communicating than on HF radio. I Phone for instance, any time of the day or night I have had interesting, live audio and video communications to any place on earth. There is a whole world of ultimate techology in communications and that is where the young kids are. The local radio clubs here are mostly older people who are struggleing to learn more about computers instead of radio. and some youngsters who could care less about HF or anything it has to offer. I can remember when an HF station at the club was always in use. Today it sits there and no one gives it a second look or even cares to use it. On the other hand a PC on the internet you cant get your hands on it. What does the club have for lectures these days?Certainly not radio. Its all mostly slide shows and talks on Internet and computer technology.Ham radio classes are almost non exsistant.

From: J1aguiar <j1aguiar@aol.com>
Subject: Listening
Date: Saturday, May 01, 1999 3:53 PM

Just listening here on 20 meters.I hear very few signals on the phone part,but on CW the signals are coming in from all directions. I turned on the spectrum scope and it also showed strong activity on the lower CW end of the band. During the evening the same is true on 40 meters. CW is the most popular mode of operation. One does not need a crytal ball to know where the action is.

Subject: Waiting For The Other Shoe To Drop
Date: Tuesday, May 04, 1999 12:40 PM

With all the talk that has been going on here about code, things are awfully quiet up stairs.Everyone is sort of waiting to see which way the FCC is going to go. As for me I think I will get the Windex and clean my crytal ball because the last time I looked into it I saw Mr. Ed dressed in wolfs clothing.I have even tried talking to the magic mirror on the wall and all I can see is the ARRL with a basket of poisened apples that have long since gone rotten.How ever the NCI group for some reason insists on eating from the basket. Getting back to the other shoe,could very well be the FCC does not have a leg to stand on,but does that mean one shoe is missing ? Gosh we could be waiting for nothing.Oh Yea! that reminds me,let me tell you about the fellow a saw once at a Boston ARRL ham fest.This guy had sneakers on, one was sort of a dirty white, and the other was bright red, holding a can of RAID bug killer trying not to be noticed as he stood close to the Vibroplex booth ,what some guys wont do.

From: J1aguiar <j1aguiar@aol.com>
Subject: Roll Over Hirem
Date: Tuesday, May 04, 1999 8:17 PM

As Amateur Radio slowly decays into what will soon be nothing more than a waist land for the use of personal communications and home control devices, so wont the ARRL. Early into the new century the ARRL will be dismembered and forgotten about. Personal communications will also disapear from the radio frequency spectrum as more and more electronic devices consume and turn the HF spectrum into a waist land of white noise and digital pulses that have no significant meaning other than to turn on and off someones automated home servicing system. Licenses will no longer be required and radio frequencies will simply be there for the taking by anyone who finds a use for them. So what are we all waisting our time over code and licenses for. Let everyone do as they please with what ever is left of it because pretty soon it aint going to be worth listening to anyway.See you later ARRL, the future is coming and it wont be in your favor.

I wonder who is buying all these keys, paddles, not to mention keyers. I hear the sales on Bugs and other varieties of keys and paddles are at an all time high at some high prices. I took an inventory just for the heck of it to see how much money I have invested in keys and it comes to well over a thousand dollars.Whew! if I had only known a few years ago that the price of keys were going to sky rocket. A key that cost $75   is now selling for $150, and some keys have trippled in price. I have one here that cost almost $300 and I cant remember paying more than $100 for a key in my life. If code is eliminated I wonder if the price of these keys will go even higher ?

From: J1aguiar <j1aguiar@aol.com>
Subject: Start Over Again
Date: Sunday, May 09, 1999 9:27 PM

I think every ham today, Extra on down to Novice should be subject to an entirely new exam on electronics theory,non multiple choice along with an oral examination. Every licensed ham should have to build a complete radio station without any help. Non of this appliance plug and play units. The code test should be a grueling solid 5 minutes copy of 20 wpm for Extra. No other class of license. You get the Extra or you dont get to be a ham. Once you prove you can build your won equipment, then you will be allowed to buy a radio.That would reduce the QRM down to where it was some years ago when it was much nicer to be on the air. Get caught without a license and its 20 years and several thousand bucks like the old days. I am sick and tired of listening to all the cry babies, wa wa wa no more code wa wa wa, why do we need code wa wa wa.

From: J1aguiar <j1aguiar@aol.com>
Subject: New Game
Date: Monday, May 10, 1999 3:24 PM

If I was a kid all over again ham radio certainly would not be on my list of things I would want to do now. It does not matter if its a code test or what ever, if I wanted to be a ham nothing would stop me from getting to where I waned to go. Looking at what technology has to offer today, ham radio can never compete.Computers are the way to go and it certainly would be my choice of fun things if I was a kid again. I find that just using Internet Phone opens the biggest door for world wide communications using both audio and video. Its difficult to go back and listen to ham radio after playing around on the internet. I have tried SSB and its just not as good as the Internet Phone. I do think CW is at its all time high for modes of operation at this time only because of the contests which I have no interest in other than listening for a moment or two. Towers and antennas not to mention thousand apon thousand of dollars invested in the radio shack here just dont compare to the small investiment of $2500 invested in a PC. What I cant imagine is how in the world is ham radio ever going to spark interest in all these new people by reducing requirements for licenses? If the use of ham radio was for the taking, no licenses needed it still would not be attractive except for a few who write in the NG and that is not a large population. My entire family are Extra Classed and they all have since given up ham radio. Collins S lines and Kenwoods collecting dust and cob webs in some dark corner of basements,antennas that have long since been converted to be used on the VHF marine band.One who has an Icom 706 because its tiny and out of the way, and one who is a retired doctor who still now and then fires up his old Hallicrafters to listen when there is nothing else to do. Ham radio for me may now be nothing more than a bad habit that has been taking up more of my time all these years. I find my self wrestling with the thought of dismantling towers and antennas and selling off all the ham gear while its still worth something. So its not just the new kids who are not interested, its the older hams that are also loosing interest. Ok, I have said more than I should have again and I know I am going to get picked to pieces for it as usual, but go a head and pick as long as your having fun. 73 Jim

Subject: Save CW
Date: Tuesday, May 11, 1999 9:45 AM

The sure cure for NCI and ARRL insisting that a change has to be made is to simple discontinue being an ARRL member. That will kill the no code debate and them arogant NCI nit wits. Seems as though these younger people just want to come walking in and get everything the easy way. If all the old so called Farts who are for keeping things the way they are stopped subscribing to that QST magaizine I think the message would come through loud and clear. I do work many CW Farts as one NCI member so says it ,who by the way earned their license the old fashioned way, have already discontinued QST years ago when ARRL first had the brain storm of improving ham radio's image by inventing the incentive license. That was supposed to give us hams more respect. The only thing the ARRL did was shoot themselves in the left foot and has been financially limping ever sincel. This time it will be the other foot and perhaps Ham Radio can get rid of this ARRL once and forever. The ARRL has lived its day an today its nothing more than a bloody plaque that is going to wipe out ham radio in the end. Once again ARRL has nothing more to gain than increasing memership and they are willing to sacrifice everything that ham radio stands for in the process. Amateur radio is being led to slaughter by a magazine puplishing outfit that is in financial ruin.

Subject: Taking It With Them When They Go
Date: Wednesday, May 12, 1999 2:51 PM

The ARRL is going to take everything with them when they go.Amateur Radio is going to be left in ruin. Right now they are slowling, limb by limb dismembering Amateur Radio. Morse is being accused of being the cause of all the problems.Old time radio hams who love telegraphy are being accused of holding things back.The younger" You Owe Me Society"are demanding easier access to ham radio " privilages. " Amateur Radio has been split up into groups and are now fighting among each other, the divide and conquer method approach . All those who are apart of the NCI group are only ruining what once was a good thing just because they are led to believe by the ARRl that code is the major problem.The sooner all Radio Amateurs demand unification by reuniteing and demand that no lowering of any standards be set, the sooner Amateur Radio will regain its strengh into the future,but we can not do it by lowering standards and allowing ARRL to continue on proposing idiotic ideas in order to gain members into the ARRL. The population of Amatuer Radio need not be so large that if it does not support the ARRL financially is considered to low. ARRL has continued on making the population of Radio Amateurs its main goal for no other reason than its own membership.If the ARRL was to simply go out of buisness,things would improve in a more natural way without forceful recruiting programs to attract more members.

Subject: Using A Keyboard Mobile CW
Date: Wednesday, May 12, 1999 5:03 PM

Just to consider how easy CW can be. Not long ago I used to QSO a fellow who had a keyboard attached to the steering wheel of his buisness truck.Often I would catch him on the road and keep him company as he drove from one place to another. The CW was super perfect and he was using full QSK which made it better. He would be sending CW at 50 wpm and driving at the same time.Often more than one station would engage in the same QSO using full QSK and not a word was lost, even when more than one was sending at the same time.It was funny, I could always tell when he was making a sharp turn because it was impossible to continue sending with a keyboard that was rotating upside down. However using a buffered keyboard he was able to control such interuptions.

Date: Friday, May 14, 1999 12:13 PM

Some years ago I was at the registry of motor vehilces waiting for an eye test. In front of me there was an elderly gentleman who was quite nervouse about having to pass that eye test. After several minutes of struggling and not reading off what he was seeing in the machine correctily, the gal giving the test called one of the registry inspectors who came over and held up to fingers and asked the elderly gentleman how many fingers did he see. The man quickly replied "two" and the inspector said your OK and the lady quickly processed his application and he went in the next room to get his photo ID for his new license.

From: J1aguiar <j1aguiar@aol.com>
Subject: Old Goats and CW
Date: Sunday, May 16, 1999 2:08 PM

Seems as though cw is aquainted with being an old goat, someone who has age spots how enjoys living in the past. Nothing could be further from the truth. The majority of younger radio amateurs today are using cw on the HF bands and are Extra Class licensed. There is no question that cw is still the most popular mode of ham radio communications. All one has to do is tune across the amateur radio bands, especially during a contest week end and its not difficult to notice that cw is being used on a world wide scale with great skill. I usually try to find some old goat on cw, and there are plenty of them, but the majority of cw hams are younger, and quite a few are teen agers who have learned to master cw as well if not better than any old goat I have ever heard. Last but not least, I hear more old goats on SSB doing nets than I do on cw and that is the truth.

Subject: Its Not CW's Fault
Date: Sunday, May 16, 1999 8:59 PM

Its not the fault of CW that the phone bands are almost dead. I guess if they did away with code perhaps then the phone bands may find some use.

From: J1aguiar <j1aguiar@aol.com>
Subject: Remember This
Date: Sunday, May 16, 1999 9:24 PM

CW is going to survive and be around long after ham radio perhaps forgotten and most of us here today are dead and buried.If anyone thinks otherwise they are most welcome to do so. If you live long enough and turn into an old goat you will remember what I just said and wish that you had taken the time to learn that wonderful art of Morse Code, but then its never to late to learn is it?

From: J1aguiar <j1aguiar@aol.com>
Subject: Morse Code Hazing Rituals
Date: Monday, May 17, 1999 8:47 PM

Where do so many of you NCI advocates get the notion that the Morse Code is a form of hazing. If you were to go for your ham exam and a VC person beat you over the head with an old telegraph key because you were not coping the code, then I would say it is a hazing. I think all you NCI people have monkeys on your back and are still afraid of the dark.

From: J1aguiar <j1aguiar@aol.com>
Subject: It Makes Sense?
Date: Friday, May 21, 1999 9:12 AM

1. Code is not longer needed.
2. I can not learn code.
3. Trying to learn to copy fast enough has causeed me mental depression.
4. I would not allow my childeren to waist time learning it.
5. I have my Extra and I can copy 25 wpm but never use it.
6. Governments want Amateur Radio frequencies so we need more hams.
7. Younger people would consider ham radio over internet if it were not for the code.
8. Having to learn the code is a form of hazing.
9. Morse code is used to discriminate.
10. Records show that hams who have learned the code and became hams cause more of the problems on the amateur radio bands.
11. Anyone who is against changing the code requirments is said to be old and living in the past.
12. The ARRL would like to see the code requirements changed because it

would attract more interest into the hobby, and money has nothing to do with it.
13. The majority of hams using CW are found to be around 60 years old or older.
14. Keeping code requirements as they are will put the future of Amateur Radio at risk.
15. The future of Amateur Radio is looking grim because ARRL membership is low.

From: J1aguiar <j1aguiar@aol.com>
Subject: Were In Good Hand
Date: Friday, May 21, 1999 12:09 PM

I guess Amateur Radio is in good hands. As long as it can keep the money makers happy there will be no problem. I suppose if other Governments including ours could not touch ham radio frequencies if   more hams were spending money on new radios and magazines. Then I guess the bands would be so crowded that it would be useless like the CB radio service and no one would want them. Could it be that the reducing or eliminating the code requirements for ham radio licenses be the answer? That must be it, get rid of code and amateur radio will survive, yup that must be it.

Subject: CW Just To Valuable
Date: Sunday, May 23, 1999 12:02 AM

How can anyone justify not keeping the code requirements as they are now. The code test must remain intact as it is now because changing it in anyway will certainly lower the standards of Amateur Radio. Anyone who learns the code to become a radio ham certainly has not waisted his time in doing so. Knowing the code is a valuable asset to communications.To say that the code requirements should be changed for the sake of attracting more new comers into the hobby is without question not in the best interest of amateur radio and the art of communications. CW is just to valuable and an effort from everyone who wants to become an Amateur Radio Operator should be made to learn how to use it with the upmost skill. Its unthinkable to even consider Amateur Radio licenses being issued without the current code requirements.

From: J1aguiar j1aguiar@aol.com
Subject: Old Generals Get Screwed
Date: Monday, May 24, 1999 4:03 PM

How about the old general class, remember when they used to take the license exams at a FCC field office ? They want to grandfather the Tech Plus and the Novice to general right? How come no one considers grandfather a general class who took his exam some 30 years ago at one of the FCC exam offices.I think it would be only fitting to at least consider giving them the Advanced. Now lets not forget the guy who took his advanced back then also, will he get an automatic grandfathering to Extra? Now this leaves the the Extra, what does he get, a free cigar for his efforts ? This whole idea of free rides is crazy. If the code tests are going to be reduced or even eliminated I think Tech Plus or Novice's should be required to retake the entire upgrade version of the new license. It only seems fair that they take the new exams that will be issued seeing as they never did pass the required code tests. So here it is again. The FCC has eliminated the code or reduced the required speed and all those who have still not upgraded to general will have to take the newly formulated exams inorder to become general.

Subject: The Big Joke
Date: Monday, May 24, 1999 5:43 PM

Two major initiatives will allow greater access to the full range of facilities that Amateur Radio has to offer, and broaden the appeal of the hobby to a wider audience. More amateurs will have the opportunity to experience worldwide communications, and newcomers to the hobby will find it possible to make contacts on a wider range of frequencies. In the above paragraph they use the words "major initiatives". What initiatives are they talking about ? What they mean is they are going to give access to a full range of facilities that amateur radio has to offer. Hell it did not take any initiative to get that.

Subject: "Unknown Organization" speaks out
Date: Sunday, May 02, 1999 12:40 AM

To whom it may concern (or even not concern), At this time, alleged "unknown organization" will expose, by using "we" logic, that the ARRL is actually a cover group of NCI. DISCLAIMER: "Unknown organization" makes no claims that this is in any way a statement of policy or belief of said organization or any members or non-members. This is only an example of "inlligence type logic" and this "example" is not to be taken any more seriously than the original. "We" has "proven"; ;Premise #1 - Passing a code test is an achievement. ;Premise #2 - Things are achieved via hard work. ;Conclusion #1 - Passing a code test requires hard work. ;Premise #3 - Whine is defined as "a complaint uttered" {Webster's New ;Collegiate Dictionary} ;Premise #4 - [ARRL] has stated that it wants to lower the code test ;speed. [This could] be "interpreted as a complaint against an unjust CW ;test." ;This is validated by the fact that [ARRL] sent a document to the FCC ;requesting that its complaint be acted upon. ;Premise #5 - Publishing a web page with the intent that the web page ;gets read is synonymous with making an utterance. ;Conclusion #2 - [ARRL] is (and the members are by attribution) whiners. ;Premise #6 - [ARRL's] *stated* goal is [to change] code tests. ;Premise #7 - An organization with the *stated* goal of [changing] ;code tests will tend to primarily attract members who [want to change] ;all, or many, of the code tests required for the licenses they seek. ;Conclusion #3 - The [ARRL] membership is comprised primarily of people ;who have not passed all, or many, of the code tests required for the ;licenses they seek. "We" concluded with; ;I am now allowed to freely call any [ARRL] member a "malcontent", ;"whiner", or "non-achiever" at ill. ---- End of "proof" ---- And using this "logic", it follows that the ARRL is actually a whining cover group -of- NCI. This "logic" can seemingly be used against (almost) -anyone- who wants code test changes made. And since those "whiners" at the FCC are the ones that really started all this with that darn NPRM Jim Rosenthal, WA4STJ (Non-member of ...., or maybe I am.)

Subject: Hot Shot Electronic Engineer
Date: Thursday, June 03, 1999 5:27 PM

I remember a fellow some years back, considered as being a hot shot EE, it took him several trips"13" to the FCC office before he came home with his General Class. He was an Electronics Engineer and built his radio shack from scratch. Back then it was AM and his station was a big floor console on casters, Impressive it was, except he was getting into every television, radio and he was even getting into a bathroom next door,which I thought was funny then. As long as I knew this guy he never did correct the TVI problem nor did he know how. The FCC even put him on restricted hours for a spell. This fellow would be on the air constantly during the time he was at home and would stay up until the wee hours talking to who ever was there on his radio and unable to get off to work the next morning. Needless to say he was a disgrace to ham radio and the neighborhood I lived in, and because of him I was ashamed to admit that I was a ham also. Being an electronics engineer does not mean he will make a good ham. This fellow would have made a good NCI person as he hated code. This does not mean of course all electronics engineers are this way. Being an electronics engineer has absolutely nothing to do with being a better radio amateur.

It sure looks like the end is near for ARRL and VHF and UHF. As for HF radio I think its on its way out as well, but not totally.In the not to distant future HF radio will continue on being the place for CW activity. Telegraphy will dominate the HF bands over any other mode of operation. SSB and digital will soon disapear from HF radio. Those who remain using CW or Telegraphy on HF will have no interest in the ARRL if it should even continue to exsist, which I doubt it will as we know it today. One thing for certain, the quoted " Devoted Entirely To Amateur Radio" will be nothing more than a memory. Change is coming as predicted. J1

Hi Jim:
I did it "She is 55 es she is his sister" and its a good exercise. I have been using a bug for the past half century and I must say there is no substitute for a Vibroplex. I have seen and tried a lot of so called bugs and they are at best junk.

I am not a Vibroplex collector, but I never refuse buying an old Vibroplex. The other day I was driving past a yard sale and stopped to see what there was.To my surprize I saw an old Vibroplex Original Standard Mode just like brand new. $5 and I walked away with it. Many years ago I owned a Blue Racer and I cant remember where it went. Today I have a new Original Deluxe that I bought when they were being made up in Maine, I also have an old Lightning Bug and the one I got at the yard sale. I have a closet full of paddles that are all brand new and some of which cost as much as $300. However I use two Vibroplex Paddles, one is the older single lever "non Iambic" and the other is a newer double lever "Iambic" which has been modified for non Iambic use. The other non Vibroplex paddles still remain in there boxes and have never been used. I must admit though, most of them are really a work of art and required some heavy design and machine work to produce, not to mention the extensive use of brass and silver. Its amazing though, in todays age that Vibroplex is still able to produce the same product as it did some 50 or so years ago. Some things dont change, thank goodness. Last but not least, the sound of a Vibroplex is the signiture of a pro.HI J1

Subject: No Code Idiots Must Have Pumpkin Rot
Date: Tuesday, June 15, 1999 10:58 PM

Reading this months issue of QST where a 10 year old gal gets her Extra Class.
I cant help but wonder what all the fuss is about when I read these kind of stories. Here is the ARRL suggesting the lowering of the code requirements and
they publish a story about a 10 year old gal who gets the ultimate class of ham
radio license. All you No Code Idiots should be ashamed to even complain about
the code. You know what I think, all you NCI all have pumpkin rot and worry
about old hams with age spots and young kids learning the code. HI J1

Subject: Learning Code Is Easy
Date: Saturday, June 19, 1999 12:58 PM

Yes its easy. Actually its so easy that it scares the hell out of most people.All it requires is a minimum amount of effort to be able to use code at 13 wpm, and 20 wpm is not much more faster and a lot more enjoyable. Younger people are not as likely to become intimidated by learning the code. I think older folks are more affraid of failure than anything else and that is why the code has become the stumbling block. Anyone can do it, and even those who have tried for years can do it if they just put their minds to doing it instead of failing. Reducing the code standards is going to cause more harm than good if it means that so many people wont be required to learn it to get their license. Amateur radio is Morse Code and CW is one of the most used and enjoyed modes of operation in amateur radio today.To become a ham and not know code is a horrible thougt. That is the truth. 73'es J1

From: J1aguiar <j1aguiar@aol.com>
Subject: No Respect
Date: Monday, June 21, 1999 2:14 PM

I think if keeping the Morse Code serves no other purpose but to filter out the rude arogant and self centered greedy indiviuals who call themselves NCI, then its all the more reason that the code requirements remain intact as they are today. Its bad enough that some have already found a way around the code and have obtained an Extra Class license. J1

From: J1aguiar <j1aguiar@aol.com>
Subject: All CW
Date: Wednesday, June 23, 1999 3:15 PM

The FCC should consider opening all HF radio, general coverage to CW only and require a 50 wpm code test as a weed eater. This way the No Coder Communicators can have a ball without having to put up with CW on their ham frequencies. It would require a new licence for telegraphy only, and to tell you the truth I just as soon it not be called Amateur Radio anymore.
J1

From: J1aguiar <j1aguiar@aol.com>
Subject: Obvious Postings
Date: Tuesday, June 29, 1999 11:53 AM

Why do people continue on trying to promote the no code standard, or at least reduced code requirements. Its obvious that these so called no coders either dont like CW, or they dont even want to learn it,not to mention those who stand to gain by it. They even invent reasons why learning the code is of little importance and that if the code requirements are not reduced it will be the end of ham radio. And even worst, some of these people actually take it apon them selves to teach and promote amateur radio to youngsters. I have never met a youngster yet who has found learning the code difficult or uninteresting and that goes for many of the adults who find learning code something they have always wondered about and never had a reason to learn it until now. Amateur radio is a very good reason why one should learn and practice using the code. A amatuer radio population that is code ignorant is not amateur radio anymore.J1

Subject: Another Joke
Date: Friday, July 02, 1999 9:30 AM

Here is part of another posting quoting the famous ARRL letter.

"The league has already sent a detailed letter to the Commission recently almost demanding that they adopt their proposal as a middle of the road compromise and claiming that the delay is stopping a lot of Amateurs from upgrading their license class etc."

Reading the above I am wondering how a delay could have stopped anyone from upgrading. Surely by now the ARRL must realize that the term upgrade is no longer a valid one. If the ARRL proposal is to ever be excepted, then there will be no upgrading. The entire incentive program would need to be changed before any new proposals can be considered.

Looking a bit closer at the ARRL letter shows more than a concern for all those who are waiting for the new proposal to upgrade. It shows that the ARRL has once again shot itself in the left foot and is prepared to shoot the other in an attempt to increase a dwindling ARRL membership.

The last time I visited a radio club that was doing VE exams for Amateur Radio Licenses I never once saw any guards standing at the door stopping anyone from upgrading, if fact everyone was welcome to apply for and take the exams. 73 J1

Subject: And Then He Created HF
Date: Monday, July 19, 1999 3:00 PM

There is no question that CW and HF radio go together. Anything else is just a passing fad that comes and goes. All your digital modes are nothing more than computer parlor games for those who like to play computer jocky on the ham radio bands. Digital modes are best left to the cable or the VHF and UHF part of the radio frequency spectrum. The only other mode that I will consider for HF is SSB. Single Side Band works out really great on HF. Why anyone would want to use digital on HF is beyond me, especially when they can sit back and communicate with CW or SSB with out all the computer junk that is required to make digital possible. J1.

Subject: The True Story
Date: Tuesday, August 17, 1999 1:17 PM

When all is said and done and the reduction and or elimination of the Morse Code requirements become the standard amateur radio as we know it will change for ever. The change will make it possible for many who simply want to utilize ham radio for personal communications and have no interest in amateur radio for what it is. Amateur radio is not and never has been intended to be used for commercial use. Many who stand to gain financially are anxiously waiting for the change in hopes it will increase the population of licensed amateurs. None of these changes are best interests of amateur radio, it will indeed suffer from the increased numbers of non amateur radio interested people and those who are hoping to financially gain. J1

From: J1aguiar <j1aguiar@aol.com>
Subject: Poor Reasoning
Date: Monday, August 23, 1999 1:03 PM

There is no reason other than laziness or stubornness, not to mention the" YOU OWE ME" attitude for not being able to learn code and get up to speed. Amateur radio is unlike any other kind of communications. It does not matter if the commercial or military has stopped using code or not, its all the more reason why amateur radio must keep the code requirements as they are.In the history of amateur radio everyone learned the code and was never sorry they did, even if they chose not to use it. One could simply say that they would never build or repair their own amateur radio station equipment, so why should they have to learn the technology that makes it all work. There are countless reasons why we all should not learn or do things that we dislike and we try to justify reasons in one way or another. One of the reasons that has really come to light is that code is being forced on one, its a pitty that anyone could even consider that reason as being a valid one. J1

From: J1aguiar <j1aguiar@aol.com>
Subject: CB and Ham Radio
Date: Saturday, August 28, 1999 1:23 PM

Everyone should be welcomed to join amateur radio. To say that the people

who use CB radio are not capable of becoming a ham is not true. I knew of an old timer who for years was a ham, electroincs engineer, ET in the Navy where he learned electronics and through the years as a ham he built all his own amateur radio equipment. As time passed he gave up amateur radio for CB. But what I am saying is not that, I think everyone should be treated equally. Anyone who wants to get into ham radio should not find it difficult. Most of the radio clubs welcome anyone and everyone is always more than willing to help one get started. I know of many hams who were once a CB'er and have made the transisition without any difficulty what so ever.

Subject: CW Forever ?
Date: Sunday, August 29, 1999 9:27 AM

No question, CW is the favorite of all modes and its not about to change, not now and not later. In the future its possible that ARRL may be long gone due to financial illness and Amateur Radio as we know it today will certainly change. There may even be a new magazine that says"Devoted Entirely To Amateur Radio" on its cover. In the future CW will become even stronger than ever before and those who choose not to use it will be left out,not because of any license requirements, but because they chose apon them selves to be left out. I would not be surprized one bit if Amateur Radio becomes a CW only activity some time in the future because nothing else will be of interest in radio other than the use of it, in fact its already happening. J1

From: J1aguiar <j1aguiar@aol.com>
Subject: To Many Poor Reasons
Date: Saturday, September 04, 1999 2:04 PM

I often wonder if there is an end to the excuses why one should not have to learn code, or why code should be removed from the amateur radio license exams. They are all excuses, one way form or another, non of which have any bearing on amateur radio and, or its requirements. I think anyone who insists on creating reasons to why they should not do something instead of simply doing it , especially when doing is much easier than not is a fool playing a fools game, there are no winners in that game. I hope that the FCC listens up and takes all into consideration in thinking about the new proposals, it would be a sad day when fools can be considered worthy of any changes that would destroy the incentives of those who take pride in what they do. The poorest reason is, " just because you did it, why should I have to be forced to do something if I dont like it" J1

Subject: Another Persons Opinion
Date: Monday, September 13, 1999 7:05 PM

I am posting this for another person. After my telling him what has been going on here on the NG he asked me to post this for him until he can find his way clear to responding himself. Here goes the following text.J1

"CW is part of ham radio; do away with CW and you do away with part of ham radio. Sure, cw is not essential but niether is Ham radio, it is just a HOBBY. The CW requirement is like an IQ test. If you can't pass the code, then your mentally retarded and really should not be playing with electricity anyway. Why lower the standard? As it is now, the newer hams I've met are a bunch of wingnuts GIVEN a license. Most hams are wingnuts to begin with. Ever have an eye-ball for the first time with a ham you have heard on the air many times. Quite frankly, I am more times than not, very disappointed. It seems to me that we ought to increase the code speed requirement. Seems to me, like a lot of things today, we are going BACKWARD...FAST! Why pick on CW? Anyone who tells me that the written exam is more difficult now that it was years ago is a mental midget; it has always been a piece of cake. Anyone that complains that the exam is difficult is a cry baby and we don't want them. Same goes with the code test...can't pass it, go to K-mart or radio shack and buy a CB radio and be like the rest of the assholes. Don't ruin my hobby".............That is the end of the message....I found it somewhat interesting coming from a younger fellow, who incidently has an Extra Class License. J1

Subject: Who
Date: Wednesday, September 15, 1999 7:50 PM

Its bad enough now that Amateur Radio already has a code free license, that in my opinion is a finger in an eye of ham radio. To even consider the reduction of the code requirements is a finger in the other eye. And here we have the ARRL with its left foot already shot off and about to shoot the other one to hell. Amateur radio is in a bad way, half blind with one eye out and about to go blind in the other, and with a crippled organization leading the way I think were going to walk right smack into the gate at Y2K. As for the FCC, I would not blame them if they pulled the plug on ham radio. Lets face it, Amateur Radio has out lived its purpose and were dam lucky they have not pulled the plug on us already. J1

From: J1aguiar <j1aguiar@aol.com>
Subject: Class Of License
Date: Saturday, September 18, 1999 8:51 PM

It seems to me that all the griping about learning code has to have some sort of logical answer. Here we are seeking ways to simplify things and we dont see the answer to the problem because its standing so close to us. There can be two classes of ham radio licenses, the Extra will be called Class A1,and will require the full 20 wpm test. The next to the top Class could be A3 full privilages above 30 MHZ and all phone privilages below . There wont be any need to limit them from using CW, because they wont know how anyway. So there we have two classes. The A1 and the A3.Everyone gets what they want with only two classess of license.Oh yea, the A3 class can not have a vanity call, they must have a 5x5 call, eg, abcde5fghij. That would be Alpha Bravo Charlie Delta Echo FIve Fox Golf Henry Item Juliet, That way we will know them dummies when we hear them on the air. HI J1

From: J1aguiar <j1aguiar@aol.com>
Subject: Unreasonable
Date: Thursday, September 30, 1999 4:58 PM

I don't know who really wrote this one, but its a good example of the mentality thats behind the code requirment changes. Here goes...

I'm not a ham yet Rick, but I have shifted through hours of reading on the internet. I've poured through the IARU site,ARRL site, and email reflectors in order to get a full grasp on the morse code debate that goes on here. Even though I would like to see code eliminated, I still think 5 wpm should be a standard requirement across the board in the future till the requirement is struck from the international treaty. And yes, 12 wpm is reasonable for the Extra class at this time, since no one is required to hold an Extra class license unless he/she so chooses.

So there you have it.....What is so reasonable about a 12 wpm code test for an Extra Class License ? And then he says " no one is required to hold an Extra Class license unless he/she so chooses", are you kidding, with a code test like that you can dam well bet he/she will break a leg getting down to the local radio club for that next Extra Exam. Unless they keep things the way they are, we can expect to see Amateur Radio go down the tubes in the next decade. J1

Subject: Why A License?
Date: Tuesday, November 02, 1999 12:53 PM

Is there any reason today for amateur radio licenses? Seems as though the FCC and ARRL and everyone else involved in regulating amateur radio licenses is struggleing to justify a reason   to what I assume as an almost un needed license. I read where "most" amateurs are no longer involved in the technical apsect of radio electronics. Every ham, or I should say the vast majority of hams today buy their radio equipment commercially. Repairs are mostly done at repair centers. Actually there is no need for any license that requires a written exam dealilng with electronic theory. Perhaps a simplified exam dealing with operating proceedure may suffice. As for the Morse Code, there again, it has been proven that the majority of people who desire to obtain a license have no desire to either learn the code or ever use it . It would seem reasonable that a license could be issued on a simplified exam dealing with just the important things such as important FCC rules. My question is, why are licenses required at all. J1

In article <3ae37908.6626099@news.mindspring.com>, Bill Sohl says...

>Well you can do alot of antenna work in that 8' space.

The point is not to "do alot of antenna work".

The point is to construct antennas which have a reasonable chance
of projecting a readable signal to a distant location.

Limiting the space to 8' above the roof is not reasonable, but equivalent
to the dump huck "let them eat fish heads" tag line of K4YZ.

Bill Sohl wrote:

> Tube therey should be part of the basics today?
> Why?

For the same reason that Morse code should be. It is still a very viable, frequently used technology that can and does serve the public interest. There are millions of electron tubes in existance, and many hams still use tube type gear, some of which is hybridized such that the drive and final amplifier stages are tube type. Othere still use gear based on vacuum tubes, and many still build simple tube type ham gear for use on the ham bands. All news to you, isnt' it?

The point is clear: Just because more efficient technologies have taken over the mainstream of communications in no invalidates the usefulness of the eariler technilogies still in existance. When they become as hard to find as a wireline telegraph installation, then it might be time to write them off completely.

I don't know of a single wireline telegraph installation still in use. There are a few guys in a St.Louis club who like to play with it in their own meetings.

Hi Dwight,

Thanks for the clarification. While I've not gotten to the six element level, I did add two more director elements to expand her to a four element quad. I need to clarify though. I have a half-acre plot with some fairly tall trees. When my wife and I first settled in, I threw up a dipole (taped to the wall, no less) and amazed my wife by working xxxxxxx (geographical references removed to protect the guilty) and xxxxxxxx xxxxxx in short order with 12 watts.

She asked if we'd be able to QSO with her Uncle in xxxxxxx, I told her we'd give it a shot but decided to "stack the deck" in our favor by puting up a stationary wire quad, appropriately aimed. Viola, just as if he was in the room next to her. I explained that we'd do even better on 10 meters with 100 watts and clearer frequencies. Now she's studying for her ticket. That's how our stationary wire quad was born. I'd love to erect a six element conventional 10 meter quad. (Yet another project to add to my list.) My next 11 meter project is a three element pseudo-quad with a "bi-square" as the driven element. I'm mulling over exactly how to feed this array. Our trees give us nice height (and camouflage) although my best friend in rural MD laughs at me and jokes that our trees qualify as large branches where he lives. That's ok, for all his space he can't put up an array of any size due to his neighborhood's deed restrictions. His hand are full just camouflaging a 2 meter quad in his trees. Anyway, sorry for getting so long winded on you. Take it easy, Dwight, and thanks again for the info.

But that statement does not address the problem. There is NO NEED to memorize questions and answers, and certainly not any such numbers at that. Applicants who prefer just take one element at a time and work with it until they can match enough answers to their questions to pass that test, then move on the the next test element and repeat. You don't seem to think they really do this. Worse, you refuse to believe it when I and many others tell you outright, from both watching it happen and from those who have done it, that it is happening.

Actually, there are many who are suggesting that Hitler was a homosexual.
It is widely known that he did not have sex with women. So, yeah, you could
say that is another reason to hate Hitler and why people who had made that
choice, should not be in the scouts.

> Are you saying that they must be lying because they might be lying? If you want to convince me that most no-code-test advocates are opposed to CW use, I will need a bit more concrete proof than that. How did you arrive at that conclusion?

So why do you insist on playing coy, Ed? Do you really believe that none of the anticoders would dump code from ham radio instantly if they just had the opportunity? Well, they DON'T have the opportunity - now. So it makes much more sense to just be congenial and say "We really don't care if you use it.." knowing full well there's nothing they can do about it - now. But the drive to abolish mode allocations in the HF bands, should it ever come to fruition, might change that opportunity. So then, things change, don't they? If they decide to populate the traditional CW/Data end of the bands with QRO voice, they have a 'point' then that "there is no room for 'i nefficient' legacy modes.." With the type of help the Commission now had, judging from the initial wording of the restructuring NPRM should we not expect a sympathetic ear there?

To quote Bill Sohl in a very recent posting "Times change, positions change.."
(or at least that's the overt explanation).

It is still completely possible to build an automobile from scratch, Dick, but virtually nobody does it anymore. Times have changed. Hams simply do not need to know how to build their own rigs anymore. It's nice if they do but it is not necessary just as it was not necessary for you to build your own tubes. As the level of integration goes up, the necessary knowledge goes down. That's the truism of technical progress.

Have you ever asked yourself: What is the most important function that hams perform? What knowledge/skill does a ham need to perform that function? Should arbitrary knowledge/skill requirements keep people capable of performing that most important function out of the ARS?

What kind of answer did you expect, Bill? :-) Wonder if Dick would
support a test on building one's own tubes as a Morse code exam replacement?

What you don't buy doesn't matter, Dick. The doctor diagnosed it and the FCC bought it. That code waiver actually worked better than anti-depressants.

Well then, those guys are doing exactly what you want, Dick. They are expending a lot of energy doing the unnecessary work, work, work of memorizing the Q&A's when it is a lot easier simply to learn the material. They are taking the hard way out rather than the easy way. That's exactly what you said you wanted.

It was not a value judgment, Larry, just a means of identification.
Slow/med/fast for 5/13/20 seems an entirely logical way to identify
the different code *testing* levels.

 What I read said that all living things had surprisingly similar DNA.
So Cecil's DNA is close to that of the banana your chimp just brought
you.

I see you haven't seen the latest History Channel special on Hitler's sexual life. He apparently liked his young female cousin a lot. He was a perverted *heterosexual*.

That's true of you also, Dick. Homo Sapiens are 50% virtually
identical to a banana. Since we were made in God's image, He
must be a lot like a banana also.

Sure. The side that moved down onto the group residing there, of course. Which would naturally lead the residents, mostly <100 watt users, to go QRO, and well within the rules, mind you, since rules say one can use whatever level of legal power it takes to complete the communication. So then you have CW ops at a KW competing with SSB ops running at least that level. Result? Chaos.

I can't be responsible for your refusal to read in detail all the NCI

postings of the past few years. You're the guy who just can't believe
that the question pool exams can't be passed without learning all the
detailed material the questions are based on when all the exact
questiona and their exact matching answers are given in advance, and
many study guides show only the barest minimum of information, that is
only the correct answer choice to each question, and a number of posters
here have stated cagorically that they passed the tests 'studying'
exactly that way.
 You are deliberately turning your back to the realities of the
situation. That sets prececent for your attitude toward NCI and their
goals. See no evil, hear no evil, speak no evil.

 As you well know, that is a figure of speech, intended to illustrate
how easy it is to get an Extra class license today. But there ARE lots

of trained (and not so well trained) monkeys on the bands.

If you had a clue you'r know that the freebanders infiltrated long
before restructuring, and many held ham licenses and continue to to hold
them as they still work their illicit activities.

How do you know your "mode war" is not just
> another one of your many delusions? Do foreign hams with no legal mode
> separation have mode wars?

So you're too clueless to do the numbers and get some factual figures?
How many total hams are in Canada? Germany? England? in ALL of the rest
of the world?   In Japan they have lots of licensees but the vast
majority are severely limited in both power output and band segments.

Most other countries of the world have so few hams it matters not the least where they operate nor how, QRM is not a factor.

USA has several times the numbers of active HF hams of most of the rest of the world combined, all concentrated within a limited area of real estate, all ready to QRM each other. The Tower of Babel personified. Why do the users of different modes mostly stay separate from other modes? Why do you almost never hear a CW QSO up in the phone portions, where they have always been completely legal? Why don't you believe the hams in other countries who state categorically that they are opposed to changing US rules to eliminate the CW/Data portions, for this very reason?
Why don't you spend a little time learning about some of this before running your mouth?

Cecil has said that his primary interest in ham radio is in
experimenting iwth antennas, so it should come as no surprise that he
know so little about what goes on on the air.

I don't think that is true, Hans. For instance, the state of Texas
couldn't outlaw amateur radio operators because the feds have
jurisdiction.

How did you tell the difference before April 15th, 2000? Seems whatever
method worked then would still work. Checking call signs comes to mind.

Don't be facetious, Bill. Of course that means something to me.

But it does not apply in this case. According to FCC regulations, a CB radio operator must submit to an inspection of his station. Failure to do so can result in the loss of all operating privileges and a serious fine. In other words, if the operator doesn't comply with an inspection request, the local officer simply files a report to the FCC and the FCC then takes action to shut that operator down permanently (not to ignore any fine, written into the local law, the operator may face for failure to comply).

> anything, much less enough to qualify as
> an expert in court.

First, not a single officer in my county has went through a 40 hour training program to learn to operate an radar (I asked), yet not a single conviction involving a radar has ever been overturned. Second, a cop never has to qualify as an "expert" in court. All he is ever required to do is prove sufficient knowledge to do his job (and even that is not necessary if it cannot be proven he did his job incorrectly). If an "expert" is required, that "expert" is usually obtained from outside law enforcement circles.

> Ditto my last comment above. Also, that
> electronics expert gets paid $$$ to testify.
> How many towns want to take on that cost?

The cost of obtaining an "expert" will be covered by any fines imposed. It happens all the time, Bill.

> Your statement is at direct odds with your other
> comments above.

How so? What specialized skills will be required to look at a sticker on the side of a radio? And only minimal skills are required to hook a power meter to a radio (CB'ers do it all the time with no training).

> How does the local cop know the difference?
> Are you, therefore, saying anyone with a ham license
> is totally exemp from any efforts to have CB enforcement
> action taken against them? Consider Bootleg Jack
> who has a ham tech licnese and still likes to

> operate freeband. Hey, if the locals show up at
> his house he just shows them his ham ticket and
> off they go?

According to HR-2346 (or now 47 U.S.C. 302a, as amended), yes. If a license is shown, the cop has to walk away. However, that does not preclude any enforcement effort by the FCC. And I'm sure the FCC will take special notice of that licensed operator after a report is filed by a local cop (assuming the cop goes through the effort of contacting the FCC).

> I truly wonder how many towns have acted at all
> under this new authority.

None that I'm aware of so far.

Not on its face. You would have to show that. It's an issue of burdenof proof.

My point was/still is that Carl bellows his opposition to every aspect of
the ARS..rag chewing..dx'ing..cw and of course those are "his" opinions
and then wonders of wonders, the exact same "opinion" almost verbatim
appears before the FCC and of course, it's a group (baaaaaaa) consensus.

Why did you ever expect it to be. Thems in power loves to stay in power
after there's no use for thems in power...look at politicians.

At one time in the past Morse code exams were
not "arbitrary and capricious", i.e. when CW was
the only means of radio communication.
As technology changed the justification for
Morse code exams fails. ITU rule S25.5 does not
specify any speed requirement, and therefore
does not justify the 13 & 20 wpm exams, when
5 wpm exam satisfy the requirement.
That is why the FCC could waived the 13 & 20 wpm
exams in its' 1990 Medical Waiver Decision.

The USA also has the option, of taking exception
to ITU rule S25.6 in its Final Acts for WRC 2003,
should the rule not be deleted.

> Once the treaty gets Morse code removed, then you're
> a step closer - but should the FCC retain the requirement
> (even for one day beyond), you can't show that it's "arbitrary"
> because it was historically required.

While is some cases historical arguments can
be used to protect individuals from certain
agency actions and rules, the arguments
does not protect agency laws and actions
that are "arbitrary and capricious". Else how
would a court ever hold an agency rule
unlawful.

I don't know what the argument is, but generally it is impossible to prove a negative. Can you prove that you are not a murderer?

I don't need to. They are "in revolt" over the wrong things, as are
you.

If you don't see the difference between the two situations, then I guess
I'm annoying a pig and there is no reason to continue this discussion.

Have a nice life.

Nice dodge, Cecil.

However, the fact remains that you didn't specify anything until I called you down on your original comment. Changing the rules halfway through a debate may only be done by mutual consent. As this is the only way that you can salvage any of your original argument, and I don't give you that out, you lose.

Thank you for playing.

Based on available historical evidence, approximately the same percentage
of the general population has been homosexual as has been left-handed.

Nice dodge, Keith. You are guilty of exactly the same thing as I so if I lose, you owe me $100. You didn't specify which posting your $100 bet was based on. If you insist on holding my feet to the fire for not specifying something, then if you are a man of your word, you owe me the $100. I'm not going to allow you to hold me to a higher standard than you hold yourself.

Wewll, as Bill said recently," Times change. positions change". We
already knew that and therefore have gooe reason to believe there is
more to NCI's agenda than has been admitted. Of course it's not
necessary that all members of NCI be on the same page, but a few key
'leaders"....

No, I know enough to know that you can't advance the timing, nor should
you have any need to. The computer takes care of that and does a much
better job than any previous scheme. That's one reason why my 2000 GMC
full size pickup with a big V8 engine gets as good mileage as the 90
model with the 6 cyl. I bought 11 years ago. Why don't YOU know all this
if you're so leading-edge? We aren't talking auto engineering, but
rather ham radio as it is, not as it is in your dreams.

It'll take more than your word to convince anyone here. I've heard it countless times--"I've spent hours and hours trying to learn the code and I just can't do it". But what they really did was spend hours and hours saying they just couldn't do it.

Henry Ford is credited with "Think you can, think you can't, either way you're right".

No sane person wants a mode war, and if you don't think one would

result from elimination of band segments you're nuts. FCC believes it
and they don't want to have to referee it. So it will be left alone.

Hmmm, Cecil on the no-code-test side feels there won't be a mode war and Dick,
on the pro-code-test side feels there will. I wonder if we can surmise which
side would start the war?

If this sums up your position wrt amateur radio testing, I think I will let it stand on its own.

I did a search of FCC regs and didn't find the word "lazy" or any derivative. If you want to effect a rules change, I encourage you to file a petition for rulemaking with the FCC that includes the word "lazy" as a proposed regulation.

Or do you not think your idea of what the amateur radio service could withstand the test of law?

Dick, I bet you a lobster dinner you can't find a single example of a monkey who has passed the Extra exam.

Care to do more than just spout off on this one? I am willing to put my money on the table. Do you believe in your words enough to back them up?

As an alternative to keep your honor, I would accept your taking them back...

In my (not so) humble opinion, the parallel between the "hobby" of private aircraft and private radio can give us much insight into the old question of the relevance of the code.

If you have a person with a certificate that says "private pilot", you know that the person is technically competent to fly an aircraft. However, you have no idea what "aircraft" they are qualified in until you read a bit further. After the "private pilot", they can have such qualifiers as "airplane", "glider", "hot air balloon", "helicopter", "gyroplane" and a few others. Just because mine says "airplane" and yours says "glider" doesn't make me any more or less a pilot than you. The fact that I studied about engines and you studied about towplanes is only a difference in the type of skill, not the competence of the person to fly what they are rated for.

So perhaps we need one certificate "amateur radio operator" with qualifiers after the first line. You want to study code and pass the test that permits you into that part of the band, go for it. If I want to do ATV and get those privileges, I'll do it. Whatever rots your socks.

There are core subjects that we both need to know. How to tune up a rig transcends the type of operation. Most of the regulations are much the same for both of us, yet some of the regs pertain to how you do your keying and some of them only pertain to how I transmit my video. But don't ask me to acquire a skill for which I have no use.

I do not in any way debate your right to do the brass, but I fail to see how this skill that I'll never use should be part of my training. Quite frankly, if you gave me a big propane bottle and a huge gas bag right now, I'd be at a loss as to what to do with it and honestly couldn't care less how it all works. Same for CW. I'm 57 now, and the last time I touched a key I still couldn't legally buy a drink. I haven't felt the loss.

No resemblance. Nonsense Phil. See Black's Law Dictionary. To wit:

Arbitrary and capricious. Characterization of a decision or action taken by
an administration agency or inferior court meaning willful and unreasonable

action without consideration or in disregard of facts or law or without determining principle. Elwood Investors Co v. Behme, 79 Misc.2d 910, 361 N.Y.S2d 488, 492. See Rational basis test.

Rational basis test. Under this test, an appellate court will not second-guess the legislature as to the wisdom or rationality of a particular statute if there is a rational basis for its enactment, and if the challenged law bears a reasonable relationship to the attainment of some legitimate government objective. The same test may be applied when a court is reviewing a decision of an administrative body because of the expertise of such body. It has been said that the protection of the public from unwise or improvident statute is to be found at the voting polls or by referendum, not court. Munn v. Illinois, 94 U.S. 113, 134, 24 L.Ed.77. This test does not apply, of course, if the statute or decision is unconstitutional.

As a standard of review for statutory enactments challenged on equal protection grounds, this test requires that classifications created by a state must be reasonable, not arbitrary, and must rest on some ground of difference having a fair and substantial relation to the object of the legislation, so that all persons similarly circumstanced shall be treated alike. Aladdin's Castle, Inc. v. City of Mesquite, C.A.Tex., 630 F.2d 1029, 1039.

Also see:

Orion Communication v. FCC, District of Columbia Circuit, #96-1430, (12/19/1997)
We reverse a Commission decision granting or denying a broadcast license only if that decision is "arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law. 5 USC 706(2)(A); See DirectTV, Inc. v. FCC, 110 F3d 816. 826 (D.C. Cir 1997). The Commission's decisions in this case clearly fail to meet even this deferential standard. The Commission recognized that it had the 'discretion to maintain [Orion's} existing service upon ... remand ... in order to avoid disruption of service to the public." See 11 FCC Rcd 19589 91996). In nonetheless rescinding Orion's authority to provide such service, the Commission abused its discretion and acted arbitrarily and capriciously in the following respects:
....

> I've instructed you in this several times in the past and I see no need
> to rehash it.

Phil, I am not your student. I think you letting your years as FCC employee and volunteer ARRL legal advisor, bias your opinion.

> If you can't apply the terms properly, don't.

I applied the terms correctly, you just don't like the conclusion.
But you not judge, its the FCC decision, and so far they do
not feel that the Morse code exam serves any regulator
purpose.

> Stop trying

No. First amendment, U. S. Constitution, (1791)

> to play guardhouse lawyer.

Of course I am not playing guardhouse lawyer, that is just
opinion. I appreciate if you would stop referring to as a
"guard house lawyer" or any other similar term.

Despite the meaning of "arbitrary and capricious",
FCC rule 4CFR 87.503(a) is not in conformity with
5 U.S.C. 706, but is saved by and only by ITU rule
S25.5. And, that is also questionalable legal position.

Federal subsidization of the CW mode will be an
increasing administrative burden for the FCC.

Good point. The FAA has found good reasons to issue endorsements
for various types of aircraft. The FCC has never found any good reason
to issue endorsements for any operational mode other than Morse code
proficiency. In the 1999 License Restructuring decision, the FCC said
that Morse code exams served no regulatory purpose. The Morse code
test is not in conformity with 5 U.S.C. 706, the FCC will simple delete
47 CFR 97.503(a) after ITU rule S25.5 is deleted in 2003.

A better solution would be for ARRL and others to offer specific courses
in various radio amateur subjects with certificates of completions.
No specific regulation is necessary.

Certainly, most of us have. And I don't care about the "rights" of queers--they have same rights as the rest of us.

When I was in college, I worked part-time at a well-known automotive parts manufacturer as a forklift driver. Most of the guys in that department were college kids. I noticed that whenever I visited the mens' room, the boss would usually come in as well. At first, I just thought he was checking to see I didn't tarry too long. But it happened enough that I mentioned it to one of my co-workers. He told me he was doing the same thing when ANY young male went to the john. So I started to use the private stalls even when just taking a wizz. So did all the other guys, now believing this guy was one of them "funny boys" that liked to peep. I eventually left this temporary job in favor of one more suitable to my school schedule. I never knew for "sure" this boss was queer, but I learned later that he was FIRED after being caught on the roof of the plant groping a kid he hemmed in a corner. He had made the boy go up there on the pretense of helping him repair a loose vent.

I also learned that he had given EVERY college male that "hid" from him in the stalls, a bad work record so that none of us could get another job with the company.

....and I'm supposed to be "TOLERANT" of these people?

Jerry

Nuts is believing that "hoards of freebanders" were going to invade the
ARS after April 15, 2000. How do you know your "mode war" is not just
another one of your many delusions? Do foreign hams with no legal mode
separation have mode wars?

May I offer the opinion that it is slightly ridiculous to try to draw
parallels between a life and death situation and a hobby.

Hitler was a heterosexual. Does that make you hate heterosexuals?
Using terms like "these people" because of the actions of one
person is collectivism, akin to sexism and racism. Why can't we
just judge individuals for their good or bad actions?

Good idea.

There current three classes of license being issued:
Technician (T), General (G), and Extra (E).
If FCC the were to make code an endorsement; say
every 5 wpm would be a plus endorsement.

Existing Extras with 20wpm code endorsement would be E++++.
New Extras with 5wpm endorsement would be E+
Old Advanced with 13wpm endorsement would be A+++ (rounded up).
Old Generals with 13wpm endorsement would be G+++ (rounded up).
New General with 5wpm endorsement would be G+.
Old Technical Plus would be T+.
Old Novice would be N+
Old Technician depend on their previous code test would be either T or T+.

A person could then pass the Extra test with a code test and be E.

The ARRL could offer code test in 5wpm increments. So hotshot
radiotelegraph
operator who passed 40 wpm could be E++++++++. the ARRL
could handout start for each 5wpm increment. Then we have eight star
Extras.

Ceil right, the Morse code exam licensing schema
is a life or death issue for RAAP posters. :-)

The ARRL already offers code-proficiency certificates. Unless your idea is tied somehow to legitimate licensing concerns and operating priveleges, I do not think it to be a good one. The ARRL code-proficiency certificates do not affect anyone's operating priveleges.

Changed sides, Larry? :-)

My town has a height limit of 8' foot off the roof and the tallest rooftop
is 35' in our town or 8' off the ground. Otherwise you need a variance for
anything else, there are at least 2 cell towers at 150' tall  in town, and a
State Police installation, one cell site is  less than 200 feet from my
home,directly across the street where i walk out of the house every morning
looking at something I cannot have.Which is a decent antenna system.

W6RCecilA <Cecil.A.Moore@IEEE.org>
shared these priceless pearls of wisdom:

->May I offer the opinion that it is slightly ridiculous to try to draw
->parallels between a life and death situation and a hobby.

You may offer anything you please, but I fail to understand the comment. Are you saying that flying is a life and death situation? No more so than driving a car or sticking your big mitts into a 3kV 1amp power supply without not knowing what you are doing.

Getting somethin on the agenda may be easy, getting legislation
passed is the test of your endurance. As one of those City Council
folks myself, I'd oppose it as a ham because I know it doesn't
belong in local enforcement.

Were those pirates doing CB? That is the ONLY thing this
legislation alows locals to go after. If the pirate is
illegal in AIR VHF frequencies, the CB legislation is
of no help there.

Please tell us what city you live in. The locals
have no jurisdiction over your right to transmit and to be
reasonably accomodated regarding antennas and towers.
Translation, the locals can NOT prohibit you from
operating.

> I was able to convice the local town
>fathers to specifically allow mobile antennas,

Are you saying that the locals wanted to ban mobile
antennas from vehicles in their jurisdiction?

If you are saying they allow mobile TYPE antennas installed
on structures, well that certainly allows just about any verticle
that can be fixed to an automobile.

>since doing otherwise would
>restrict TV news coverage, and since this was the town where Polly Klass was
>kidnapped from, they made the exemption. Everything else is regulated.

Sounds like just a great place to live, big brother aproving
everythning. Tell me, what would they say about a dipole strung in
my attic?

I'm not a rapist because I have never unlawfully forced a person to have sexual intercourse. And I'm fully prepared to bring forth as evidence any person with whom you claim I have done otherwise. Therefore, to any reasonable person (and the law), I have proven a negative - I'm not a rapist. True, such evidence would not satisfy an unreasonable person, but I'm assuming you intend to be reasonable during this discussion.

And, sorry, I have never asserted a thing, Cecil. I have never once said during this entire discussion, or in any prior discussion I remember, that a supernatural realm exists, or that a god exists. You, on the other hand, have asserted here, and in previous discussions, that god does not exist. Therefore, between the two of us, the ONLY person making any assertion (positive or negative) is you, and I'm asking you to provide evidence to support the only assertion made - yours.

In fact, so far, the only ones offering any evidence whatsoever to support their assertions are those members of the various religious communities - the testimony of a few hundred million believers. I haven't seen a thing from you that even comes close to equalling that.

Dwight Stewart

I thought I had already addressed that. Wait a minute, I did. In a previous message, I said, "Those blue laws are based on community standards, Cecil. Your community obviously has a good number of people who, for whatever reason (religion, or they just don't like drunks), don't want people to buy beer on Sunday. If those laws were

truly based solely on religion, there would be no beer sales at all
(any day of the week)."

>NCI opposes the code test and that's it. Use it if you
>like it. NCI has no opposition to code USE at all.

The avowed purpose of that organization is to end code testing for any amateur license. But that's not the only purpose.

Several years ago, there used to be a statement on the website that when all code testing for any ham license was gone, the organization would fade away. That statement is no longer there.

Some time back, a VHF/UHF group petitioned the FCC to create a 300 kHz subband at the bottom of 2 meters for "narrowband modes" - meaning SSB, CW, and data modes narrower than a certain bandwidth. This petition had absolutely nothing to do with code testing in any way. Yet NCI filed comments in opposition to the proposal, calling for "no protection for 'legacy' modes". If NCI's only concern is ending code testing, why did they oppose this proposal?

He flew Mustangs in WW2. Was shot down over France, dragged/carried another shot down pilot (who had a broken leg) across France into Spain where Resistance folks snuck him and his buddy back to England. Then he convinced the brass to let him fly combat missions again, even though it was against policy to let anyone who had been helped by the Resistance back into combat. (The concern was that if they were captured, they might be tortured or tricked into revealing information about those who helped them). Yeager argued that since the front had advanced greatly since he was shot down, everyone who helped him was in liberated territory and there was no danger to them.

> Last I heard he was still tooling "Glorius
>Glennis" around the sky, the P-51D named after his missus. Beats me,
>you figger if he's old 'n bold himself

He had "Glamorous Glennis" painted on his planes whenever possible, including the Bell X-1 in which he broke the sound barrier. With a coupla broken ribs he'd gotten the night before.

Read his autobiography and/or Tom Wolfe's "The RIght Stuff" to see some of his other exploits. His bailout from the NF-104 is worth the whole book..

>>debate. All you want to do, Len, is call names and repeat the same mistakes
>>over and over.
>
>Nope. I stated the source of my observations, gave some numbers.

Actually, you have it backwards. I stated some numbers, and you took issue with
them.

You also derived some numbers by faulty methods. Like your claim of 59
Technicians reclassified from Tech Plus.

You also made statements that are clearly incorrect, like Technicians with
Element 1 CSCEs having no HF privileges.

>>Your "belief" in something does not make it a fact. I know people who
>believe
>>in the Easter Bunny, but their belief does not mean I must agree with them.
>
>There is a common thread among long-timers here in which
>the True Beliefs of US amateur radio are stated as if reading
>from a hymnal.

Like what? And by whom? Give us some examples, Len, not these vague claims.
>
>>Another example of faulty process on your part, Len. You lump together all
>>classes of amateur license with any HF privileges at all, EXCEPT Techncians
>>with HF. But there is a BIG difference between the minimal Novice HF
>>privileges
>>(tiny slices of four HF bands, and only one mode on three of those bands)

>>granted and those of the General and higher classes. (Generals have all
>>privileges on 5 of the 9 HF/MF amateur bands, and the majority of the

>>are even better).
>
>A True Belief labels as heresy anything against the True Belief,
>therefore all who express such "heresy" are "faulty," "in error,"
>or "mistaken."

In other words, you don't have a disproof of what I wrote.
>
>I was simply observing tabulations of US amateur radio license
>class changes since the end of June 2000 to the end of March
>2001.

No, you did more than that. You made statements about those numbers which were
clearly in error. Like claiming that ALL Technicians have NO HF privileges.

> Miccolis considered this "faulty," "mistaken," "error," etc.
>because I did not include changes that were not available, not
>tabulated.

They ARE faulty, because no allowance was made for factors which clearly affect
the numbers posted.

Your logic on this is like someone saying that since they don't know the exact
amount of rainfall in a certain location, they will assume that it never rains
there and make no allowance for rain.
>
>>You agree, then, that your work is faulty. OK. Why should anyone accept your
>>faulty work?
>
>No agreement on "faulty work." I gave my sources and numbers.
>From there on a True Believer came out with charges of "fault,"
>"error," and "mistake." :-)

No. PROOF of faulty processes. Which you refuse to accept.
>
>>I don't like analysis METHODS that are faulty. Such as counting months
>twice,
>>which you did.
>
>Nope. Was counting only 10 months, as stated.

One month got counted twice, because it had already been added to the total
licenses.
>
>There was nothing wrong with my method.

Yes, there was. Several things. Shall I go over them again?

>Some, like Miccolis, didn't like the results.

I don;'t like sloppy work. You did sloppy work, Len. Simple as that.
>
>> Or ignoring the reclassification of Tech Pluses as Techs upon
>>renewal, which you also did.
>
>That's true. However, despite Miccolis' following demand of
>"fault," Miccolis did not adequately explain how many such
>reclassifications there were or their impact on my numbers.

Yes, I did. The AH0A data shows well over 3000 Technician licneses renewed
after April 15, 2000 but before November 15, 2000. Every single one of these
has to be a Tech Plus reclassified as a Tech, because no codetestless Tech
license was eligible for renewal before November 14, 2000. Later, Jon Bloom
posted that at least 7079 Technician licenses in the FCC database have a "P"
(for Tech Plus) in the "former license class" field, as of a few days ago. I
posted all of this information right in this thread, but you ignored all of it,
because it clearly shows the errors of your methods.
>
>>Or assuming that NO new Technicians upgraded in
>>ten months, which you also did.
>
>Those weren't mentioned.

I mentioned them repeatedly.

> If there is "fault" in any analysis,
>then it is in Miccolis' failure to accept any observation that
>does not jibe with his True Beliefs.

Nonsense.
>

>>so.
>
>I've never claimed any telepathic powers or divinity...not even
>to being some kind of "apostle" of a True Belief.

Yet you claim to know others' motivations.
>
>On the other hand, Miccolis keeps harping on "fault," "mistake,"
>"error" based on nothing else but a failure to accept that this
>True Belief is not longer a creed of newcomers.

I keep pointing out the mistakes you make in your posts. Tell us, Len - if a
current Technician class licensee passes the 5 wpm code test (Element 1) and
gets a CSCE for it, but does not pass any other test, does that licensee have
any amateur HF privileges?
>
>>What is really going on is that I have repeatedly shown that your analysis
>>methods are faulty. So rather than correct them, or admit your mistake, or
>>even try to defend them, you attack the messenger.
>

>There was nothing "faulty" about the observation or interpretation.

The methods used to derive your numbers had errors in them. Some of your
statements do not agree with the facts.
>
>>I didn't ask for it. All I want is answers to simple questions, but you
>don't
>>give those. Because they are too embarrasing for you.
>
>It appears Miccolis merely wants to prolong the issue by "loaded"
>"simple questions." Good technique in newsgroupie battling. :-)

What "loaded" questions? How is the question about the Technician licnesee
(above) "loaded"?

I suppose you consider them "loaded" because they expose your mistakes..
>
>>How? If your numbers and methods are valid, explain and defend them against
>>my critique. Show where MY analysis is faulty.
>
>First of all, Miccolis started with a 12-month period beginning prior
>to 15 April 2000.

So? The subject line of the thread is "Restructuring -- did it make a
difference".

>That would introduce errors for a post-restructure
>observation

There's no requirement that all observations MUST be "post-restructure". What
"errors" are introduced by including those two weeks? Can you quantify them?
>
>Miccolis refused to accept any buffer time in April or May 2000 in
>order for FCC licensing and databases to become updated.

Why is such "buffer time" required? KC8EPO has have posted that some people
found their April 15 upgrades in the FCC database as soon as April 19 - just
four days.

>At
>one time Miccolis insisted that all must count all of April 2000
>class data without giving any valid explanation.

Not correct. I simply countd it in my numbers, rather than ignore the month of
April. You have not given a valid explanation of why all of April and May 2000
must be ignored.
>
>Miccolis continues to ascribe everything in terms of "faulty,"
>"mistaken," "error" etc. over and over and over again as if
>that is a valid or justified counter-argument.

I have given my counter arguments. Do you want to see them again, Len?

> Such is nothing
>more than polite ad hominism.

How? Show your work. Prove that the mistakes I cite are not mistakes at all.

>> You haven't done that - all you do
>>is edit out my proof of your errors and attack the messenger. Then you toss
>>in some dirty words for some reason or other.
>
>Miccolis' "proof" was considered in the obvious light of opinion
>at the time of trying to show that newcomers were somehow
>thronging to HF bands.

Now you claim to read minds. Again.

> My observation was simply on the class
>of license based on readily-available tabulations of publicly-
>available data.

So were mine.

> That data did not include precise numbers of
>changes in class over the 10-month period because such
>tabulations are no longer done at the website I used.

So you ASSUMED that the changes were ZERO in a 10 month period. See above
example about rainfall.

> Miccolis
>insisted that it "should be done" and then statedd that my
>observation was "faulty" because I did not use available data.

I wrote that not allowing for factors like upgrades and reclassifactions from
renewal was a mistake. And it IS a mistake to assume that such factors have
zero effect because you don't have the numbers.
>
>>Nope. I'm acting like a real engineer, who wants to see how the conclusions
>>are derived, and who won't accept sloppy thinking and faulty handwaving
>>processes.
>
>Hmmm..."sloppy thinking" and "faulty handwaving." Is that the
>description of observation of tabulations of classes of amateur radio
>licenses over a stated period using information available to all?

It's an accurate description of what you did when you assumed that NO
Technicians upgraded in a 10 month period because you can't get upgrade numbers
from the AH0A site. It's an accurate description of what you did when you
claimed only 59 Technician Pluses were reclassified to Technician in a 10 month
period because you can't get direct reclassification numbers from the AH0A
site.
>
>>Worse yet, I won't be bullied into accepting something because somebody
>calls

>
>No one is trying to "bully" Miccolis

HAH! That's funny, Len. You do it to anyone who opposes you in this newsgroup.
>
>>>The trend of newcomers going to Technician was there before
>>>restructuring. It continues.
>>
>>And as I have said dozens of times: NOBODY DENIES THAT!
>
>I do not recall Miccolis saying that more than about five or six
>times. That is less than a dozen. [fault! error!   mistake!   :-)]

The mistake is YOURS, Len. I have written it here dizens of times in the past
3-1/2 years. Your failure to remember it is not my problem.

>>>Such is heresy against Conventional Wisdom (CW) of the
>>>long-time ham conservatives.
>>
>>You said that - not me. Why do you deny that ANY of them upgrade?
>
>Denial was not in any of my observations. :-)

It was in all of them involving Technicians
>
>Nor is the "explanation of what happens in a 'real engineering'
>environment" germane to any discussion of tabulated data of
>radio amateur licenses after April 15, 2000.

Why not? Because it shows you to be in error?

>This forum is decidedly NOT any sort of "design review."

Sure it is. People present ideas, and those ideas are reviewed and discussed.
Often faulty logic is pointed out. Some folks, like you, Len, don;t like having
their faulty logic pointed out in public.

>>> Avocations are NOT engineering.
>>
>>Many of them require engineering. When a ham puts up a tower, it better be
>>engineered correctly, because if it falls down and causes damage, the fact
>>that it's "avocational" doesn't mean a thing.
>
>Irrelevant to the discussion-debate-argument subject. :-)
>
Completely relevant. You just don't like it.

>>The status quo is now one code test and three written tests.
>
>True.
>
>>The status quo is

>>now that support for code testing is only kept alive by the treaty
>>requirement.
>
>Incorrect. All that has been said in regard to post-restructuring
>is that the FCC did not remove Element 1 (code test) due to
>ITU-R S25.5. Nothing at all was said by the FCC as to
>longevity of any code test.

The FCC wrote that there was no regulatory reason for code testing except for the treaty requirement. They also refused to accept - in fact they denied straight-out - several commonly-given reasons (like "emergency communications") as a basis for ANY code testing. That means if the treaty requirement is eliminated, there will be no regulatory reason whatsoever for code testing.

Regulataing is what the FCC does. If there's no regulatory reason for something, it will end.
>
>>The status quo is that support for that treaty requirement is
>>decreasing.
>
>No. That is merely conjecture on Miccolis' part.

Not conjecture at all. In the comments to the restructuring NPRM, support for code testing beyond the 5 wpm minimum was in the majority - but a very slight majority (57% at most). In previous NPRMs, the support was much higher.

At the most recent Region 3 IARU meeting, only the ARRL voted to support continuation of S25.5. All of the other member societies voted to support its removal. This is a radical change from but a few years ago, when support for S25.5 was near-universal. Now the ARRL BOD has removed its support from S25.5.

>There is no
>mention of any debate-discussion of ITU-R S25.5 in any
>agenda for WRC-2003. Until that happens the status quo of
>S25.5 is that it remains as-in.

What I wrote was that support for S25.5 is decreasing.
>
>>The status quo is that the code test will disappear shortly after
>>the ITU meeting in 2003.
>
>No again. Miccolis' sentence is simply a rewording of the
>previous sentence.
>
Not at all.

We shall see in 2003.

>>They aren't? How many "newcomers" do YOU know? How do you derive such a
>>sweeping statement? From your "beliefs"?
>
>Irrelevant and unproveable by data. My conjecture has no

>"poll" or other data.

Typical. You don't know any newcomers, but you want to indoctrinate and set the standards. As if.

>>>radio amateurs are Technician class. The vast majority of that
>>>class has not taken any morse code test
>>
>>Ahhhh - BUT SOME OF THEM HAVE! At least 7079 of them, and probaly many
>>more.
>>Which means they are NOT all "noncodetested" or "non-HF licensees".
>
>Please note what I wrote: "Vast majority" which does not mean
>"all." Vast majority is a subjective quantity but generally taken
>to mean more than half, usually more than three-quarters.

Previously, you claimed that Technicians don't have any HF privileges, CSCEs or no CSCEs. You also lumped all Technicians in the "noncodetested" category. "ALL" is pretty inclusive.
>
>>Pure wish-fulfillment and speculation on your part, Len. Nothing else.
>
>Speculation based on varied media and personal input.

That's just a rewording of what I wrote.
>
>>You
>>don't know how many have taken the code test, so you ASSUME nobody has.
>
>The exact, quantifiable numbers are not available on who took
>a code test and who did not.

We have a lower bound of 7079. A lot more than zero.
>
>Note that I never wrote "nobody (of Technicians) had taken a code
>test."

You lumped all of them in the "noncodetested" category, with no HF. Same thing. Also incorrect.

> Ergo, there can be NO "assumption" as charged.

Disproven.
>
>>You deny the stated proof that thousands have taken the test.
>
>Absolute nonsense, incorrect, faulty, and full of error statement.
>No, absolutely NO such statement was made.

Yes, it was.
>
>There is NO quantifiable data of any kind to state how many
>radio operator code tests were failed, not taken, or anything

>else.

The point is the tests that were PASSED. We know about those. You assume they
don't exist.

> What the long-timer conservatives seem to insist is
>that "thousands and thousands have taken a code test" as if
>that "proves" something valid for any radio operator examination
>in the future.

Nonsense. Nobody claims anything of the sort.
>
>>Of course. That's what they said. So? They said that 4 license classes was
>>the best thing for ham radio in the NPRM, then dropped it to 3 in the R&O.
>They
>>had to issue an errata to the NPRM, and the errata had mistakes in it. They
>say
>>all kinds of things.
>
>An NPRM, a Notice of Proposed Rule Making, simply outlines a
>basis for Comment by interested parties. Final decisions are
>explained in an R&O, the Report and Order.

well, duh. You missed the point. Again.
>
>"They say all kinds of things" is a non-sequitur about the FCC. The
>FCC is the regulatory agency of US civil radio. All civil radio
>licensees ("civil" in denoting non-government, non-military radio)
>must obey the regulations of the FCC.

And they make mistakes. Also change their minds. Say things that make no sense
at all, contradict their own rules, require additional corrections, etc. They
ain't perfect.
>
>>Uh huh. Instead, they should buy YOUR "belief set", founded on hate of
>>anything that you don't like.
>
>I am simply
>advocating a belief that a morse code test for an amateur radio
>license is not needed for licensing purposes in regulation.

You're doing a lot more than that.

> The
>FCC agreed with that viewpoint in 1999 and in 1990.

Then why do you think there will be code testing if S25.5 is removed?
>
>>Try admitting your mistakes instead of attacking the messenger.
>
>No problem. When I make a true error, I acknowledge it.

HAH! That's REALLY funny!

>I will not
>"acknowledge" any "false" errors charged by those who insist on
>responses that suit their opinions.

In other words, you won't admit a mistake if the messenger holds opinions you don't like. Regardless of the proofs posted.

Typical denial.

"Ill will" ??

The FCC is well aware that the ONLY remedy that an aggrieved party has is a suit in the US Court of Appeals. Thus sayeth the Comm Act.

They field them every day, most brought by entities whom the public perceives to have a "sweetheart" relationship with the agency.

Sneaking around the back door via the Congress for anything but increased funding generates real ill-will.

Yup, it's been going on for decades. I did quite a few.

Who would think that a short, fat, bearded and bald guy was a
Federal agent?   We even had a male-female team once pose as a
couple having an argument over spending the price of the "leaner".

The Satchel Paige Rule applies.

I'm just trying to get you to realize that 50 years ago, tubes were
components. In 2001, *transceivers are components*. Times have changed,
Dick. The ARS cannot return to the 50's.

I sit here thinking about how many times I've heard that story - "I've tried and tried, spent hours, weeks, months trying to learn the code and I just can't do it'. But when you dig into it, all that time was actually NOT spent in what the party really thought he was doing...Either he had a terribly wrong technique or he was not really spending the time studying code at all. Does he actually have a mentla disability which prevents him from learning the code at any speed? Do I believe he does just because some doctor said so? Not at all. They'll always find something that the patient can use, whether or not it's real. Maybe it is, maybe it isn't. Doesn't matter does it? I've seen a lot of people who thought they couldn't do it but darn few who couldn't.

But all that is trying to prove a negative and we all know you can't do that don't we?

Dick, there is not a ghost of a chance of making radiotelegraphy
unavailable within the ARS. Why don't you choose to worry about
real problems rather than delusional ones?

> > Some
> > of us simply want radiotelegraphy to stand on its own merits and not
> > be artificially propped up by a governmental affirmative action program.
>
> Which is tantamount to it's demise.

You opinion is obviously that radiotelegraphy doesn't have enough merit
to ensure its survival without a governmental affirmative action program.
I disagree. But if you're right, and radiotelegraphy lacks enough merit
to survive, then it deserves to go the way of buggy whips.

> When will the lockup occur? Do YOU know?

Nope, and you don't know that it will ever occur. The possibility of its occurrence is not a good enough reason to force every HF ham to pass a Morse code exam. That waste of manpower is staggering.

The only grounds for a successful suit against administrative agencies are that the agency is not following the law or its own

```
  regs or if there is a major issue of public policy.

  In communications regulatory law, a "major issue of public policy"
  does not include anything having to do solely with amateur radio.
  (Sorry, guys.)

  IIRC the League claimed that the Commission did not follow case law
  on administrative procedure (the "arbitary and capricious" rule) in
  reaching its conclusions on the transfer of 220-222 MHz, but the
  Court of Appeals did not agree.

It just shows how dedicated he was to passing the 13wpm Morse code exam.
25 years times 52 weeks times 4 hours is 5200 hours.

Don't know much about Texas, do you. There exist state-wide blue laws.
Those are the ones I object to.

>   You have an inalienable right to buy alcohol on Sunday?

You bet your sweet bippie! The blue laws are absolutely a violation
of my civil rights.

There is no way you can prove that statement so using your logic of accepting things without evidence, we must assume you are indeed a rapist. I, OTOH, believe that hard evidence must be presented to prove anything.

> You, on the other hand, have asserted here, and in previous
> discussions, that god does not exist.

More of your mind fornication. I have done no such thing. I have asserted that I have seen no evidence of the existence of a God. That is the absolute truth to which I will swear on a Bible.

As has been stated many times before, this law does not require any special electronics skill to enforce, Jerry. All CB radio equipment has a type-acceptance label on it, so anything attached to the antenna connector of a CB radio without that label is illegal. The same thing with the radio itself - any radio without that label is illegal. It is just about as easy to check power output of a radio using a simple power meter calibrated by the local electronics shop (the same place police radios are worked on). And a cop can be taught in two minutes to check for modifications to allow operation outside the proper frequencies (turn the knob, look at the dial, etc).

And that is more than enough probable cause to seize the radio for evidence. And, just like any other evidence seized, that radio can then be tested by a electronics expert, and that electronics expert can be called into that courtroom to testify if needed.

Enforcement of this can be handled easily by local officers, and no special skills are required.

> 2. *Would* they consult FCC for advice as
>   provided for in the law before declaring
>   a licensed ham's station "illegal" and
>   ordering him off the air, or confiscating
>   his equipment.

Jerry, as you should well know, this law specifically excludes any licensed radio operation. In fact, HR-2346 requires any local law to specifically state that exclusion in writing. Therefore, HR-2346 does not give local enforcement officers any authority over ham radio operation. Simply show your license and the officer has to walk away.

As for the person who asked about this, that bill (HR-2346) has been passed by both houses of Congress, and signed by the President, so is now the law of the land. Therefore, if you want more enforcement of CB in your area, feel free to contact your local law makers (city, state, or county). Be sure to provide them with a copy of HR-2346 (or now 47 U.S.C. 302a, as amended).

You need to get a new set of Tarot cards, Dick. Those you have
been using are giving you bum steers.

Do you sit with your back to the wall when you go out?
Is someone always following you? Do you have a sense
of impending doom?

He managed to pass the 5wpm exam then spent the next 25 years trying to get to 13wpm and failed. His speech processing centers lose a tick of time every few seconds - something akin to a non maskable interrupt.

> Do I believe he does just because some doctor said so?

Yep, I usually listen to doctors. They have saved my life.

> Not at all. They'll
> always find something that the patient can use, whether or not it's
> real. Maybe it is, maybe it isn't. Doesn't matter does it?

From what medical school did you get your MD, Dick? Of course it doesn't matter to you just like it didn't matter to Marie Antoinette that some commoners were starving. "Let them eat cake." It certainly mattered for 25 years. It doesn't matter now because the past cannot be changed.

> But all that is trying to prove a negative and we all know you can't do
> that don't we?

This is a positive that has been proven.

I was given a life membership in the BSA as noted, since I am a choadswallower. I cumgargle on one side of my mouth and recite poetry with the other. If I slur my poetry, it is because I have not swallowed the choad yet. I like to swish it from one side to the other and savor the texture. A good choad load is like a fine wine...I swish it to and fro and enjoy, enjoy, enjoy!

I was wondering about my preferences toward 12 year olds.. I mean, take a look at this
photo of my 12 year old neighbor boy. Heck, even my mommy approves. She even

washes his underwear when he visits me on the overnighters. We share hot
chocolate and wish that Michael Jackson would invite us for a weekend visit.
I have wet dreams about Michael one day sweeping me off my feet and swishing
me away to Never, Never Land where we can have beautiful sex with his
chimpanzees and bleach our skin.
My mommy just does not understand. She says I am ill.

Oh, you mean the League sued the FCC claiming that
their agency's action was not in conformity with 5 USC 706.
Interesting, please site the case and year.

We know today that the Morse code exam requirement is
unnecessary (arbitrary), but was the action capricious?
It not necessary to show that an agencies action
was capricious, but it would help. So along comes
Mr. Hollingsworth issuing punishments and sanctions against
amateur rule violators. The one of punishments and sanctions
is CW operation only. The FCC must consider one of
its the primary exam elements a form punishment.

Capricious?

Larry kc8epo

Thanks Dwight,

I am "the person" who asked about HR-2346. By "anything attached to the antenna connector of a CB radio without that label is illegal," may I assume that you're referring to amplifiers?

You see, I fed a home-brew two element quad with ladder line via a transmatch from a stock Uniden Grant XL.(40 channels & 12 watts) There is certainly no "type-acceptance label" on the transmatch. Just curious. Thanks again.

What about laws that evolve to be capricious? There's a law
still on the books in my home town that anyone must first
contact the sheriff before bringing a horseless carriage
to town.

Well, I'm certainly not going to go hunting to find a quote to prove you wrong. We've spent too much time on this discussion already. So, since neither of us has made an assertion, then lets just end the discussion with that.

Yep, I was referring to amplifiers. As for the transmatch, I suspect any law written will be a little more specific than the one quick line I gave in the previous message ("anything without a type-acceptance label attached to the antenna connector"). In other words, there will probably be more elaborate definitions of the various illegal devices, so I wouldn't worry too much about legal devices like a transmatch, antenna tuner, power meter, SWR meter, and so forth. Of course, it's in all of our best interests to keep an eye on any of those new laws to make absolutely sure the locals do it right.

By the way, have you ever tried anything bigger than a two element quad? Years ago, we put up a six element quad at a friends house (he paid me to build it). I was an absolute blast watching that huge thing spin around (especially since he lived in a trailer smaller than the antenna). Sadly, it didn't make it through that first Washington winter - his tower broke, bringing the whole thing down to a rather unceremonious ending.

THANK YOU JIM!!!!

The fact that Carl Stevenson wrote the opposition view and that fact that
Carl Stevenson had made it very clear right here (according to the
archives)in the EXACT views and words or said opposition, has nothing to
do with separating personal views and NCI policy.

Sure...and Dinosaurs still roam the earth, especially in parts of Texas
where Monroe County residents have the DNA of unripened bananas.

But of course, times have changes and so has NCI policies. (see last
sentence of above)
